Convex discs generate high force within a very short length. Discs can be used singly or stacked in numerous combinations to achieve desired load and travel with minimal movement. See grainger.com/fasteners.

Extension (Tension)

Expand and elongate under load and have a hook, eye, or some other means of attachment at either end to allow attached pieces to give way and absorb impact, shock, or other forces. See page 2158.

Torsion

Ends rotate in angular deflection to offer resistance to externally applied torque. Commonly used over an arbor or mandrel for support, and in other applications where pressure needs to be maintained over a short distance. See page 2159.

No. 1NDW4

Spring Assortments

Note: See Grainger.com® for specific contents.

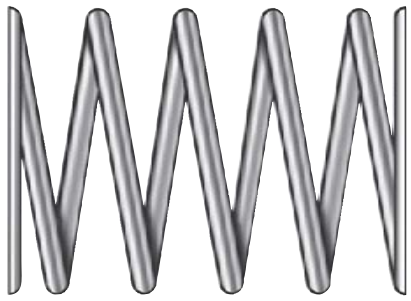
Utility Extension Springs

For use with OEM or maintenance and repair applications. Crossover center loop ends. Type 302 stainless steel meet ASTM A313 and AISI Type 302/304 standards. High carbon steel meet ASTM A227 standard.



Note: Additional sizes and ultra-precision extension springs are available on Grainger.com®; search for "extension springs" or "ultra-precision extension springs."

Precision Compression Springs

Manufactured to tighter load and dimensional tolerances.

Note: Additional sizes are available; on Grainger.com®, search for "precision compression springs."

Type 302 Stainless Steel—Springs offer better corrosion resistance and perform well at up to 500°F. Meet ASTM A313 standards.

NAAMS Series Die Spring

ISO D Die Spring

Raymond™

Die Springs

High-strength chromium alloy steel springs have ground square ends and are color-coded by duty performance for easy sorting and selection when replacement is needed. ISO D Die Springs are manufactured to ISO10243 standards and are designed to be interchangeable with other manufacturers' springs of the same size, type, and color.

Note: Additional sizes, materials, and slotted drive are available on Grainger.com®.

Utility Compression Springs

Excellent for static or low-cycle applications. For spring stock, determine spring rate by dividing the spring constant by the total number of coils used once the spring has been cut to the desired length. Meet ASTM A227 standard.

Note: Additional sizes are available; on Grainger.com®, search for "compression springs."

Anchor Information

DEFINITIONS

Minimum Embedment—Minimum depth in which the anchor must be set to function properly.

Tension Strength—Ultimate parallel load an anchor can withstand before pulling out of the base material.

Shear Strength—Ultimate perpendicular load an anchor can handle before breaking.

ANCHOR TYPES

Wedge
Fully threaded masonry with stud bolt body, split expansion ring, integral cone expander, nut, and washer. Use to fasten fixtures to a solid base material. See page 2162, 2163, 2164.

Drop-In
Internally threaded, shallow embedment anchors preassembled with an internal expansion plug for use in concrete. See page 2166.

Sleeve
Threaded stud with an outwardly flared cone-shaped end. Use to fasten steel, aluminum, wood panels, doors, framing, and shelving to concrete. See page 2165.

Expansion
Provide quick installation of lightweight fixtures in masonry and concrete. Use with lag, wood, or sheet metal screws. See page 2163.

Stud
Use to anchor pipe run supports, blowers, pumps, and support racks. Bottom-bearing is for jacking and leveling items. See page 2163.

Hammer-Drive
Nail-like devices consisting of an expander drive pin and an expansion sleeve. Used to anchor items to brick and concrete surfaces. See page 2168.

Self-Threading
Removable structural anchors work in concrete or hollow block. For high-load capacity applications. See page 2167.

Masonry
Excellent for wood-to-concrete applications. Notched high-low threads cut into masonry for stability; tapered shank provides wedging action for a strong hold. Can be removed and reinstalled. See page 2167.

Hollow-Wall
For use in thin or hollow base materials like concrete block, drywall, paneling, or plaster. See pages 2168, 2170.

Drywall
Self-drilling anchors preserve drywall integrity at installation, and stay in place while screws back out easily. See page 2170.

Steel Wire Brush

Stainless Steel Anchor Screen

RED HEAD CONCRETE ANCHORING SYSTEMS ★ GA GRAINGER APPROVED

Anchor Accessories

Plastic Umbrella Anchor No. 5HE70 has a large bearing surface inside the block that provides consistent high-load capacity. For hollow-block fastening to face of concrete block, clay tile, or terra cotta.

Strong-Bolt® 2 Seismic Wedge Anchors

SIMPSON Strong-Tie

- Category 1 Anchor Classification
- Static tension and shear loading in cracked and uncracked concrete

Use in all structural applications, including racking, equipment shelving, bracing, and seating. Use in static, seismic, and wind loading applications. Comply with ICC-ES ESR-3037.

Tested per ICC-ES AC193 to meet current cracked concrete anchor codes.

Seismic Wedge Anchors

DEWALT ENGINEERED BY Powers

- Zinc-plated carbon steel

Use in Category 1 cracked and uncracked concrete. Include nut and washer. Meet or exceed IBC, IRC, and Florida Building Code. UL Listed; FM Approved.

MKT

Sup-R-Stud® Grade 5 Wedge Anchors

- Yellow, dichromate steel
- Non-seismic rated

Can be used for immediate setting and loading. Yellow electroplating permits easy recognition after installation. Commonly used in conveyor systems, pipe hanging, racking, machinery, and anchoring. Include nut and washer. Meet Federal G.S.A. Specifications FF S-325C Group II, Type 4, Class I.

Note: Safe working loads should not exceed 25% of ultimate values.

Expansion Anchor

Expansion Shield

MKT

Expansion Shields and Anchors

- Min. embedment equals anchor length

Note: Screw length needs to be at least the length of the anchor plus the thickness of the material.

Expansion Shields—Medium to heavy loads in dead, variable, or vibratory conditions in all types of masonry and natural stone.

Expansion Anchors—Lead anchors provide quick installation of lightweight fixtures in masonry and concrete. Not affected by chemicals or moisture.

RED HEAD CONCRETE ANCHORING SYSTEMS

Trubolt® Wedge Anchors

- For use in concrete
- For increased load value, use deeper embedment
- Non-seismic rated

Fully threaded with 1-pc. wraparound stainless steel expander clip. For continuous low-temperature applications, use stainless steel anchors. Include nut and washer. Stainless steel anchors meet U.S. Government A-A-1923A Type 4.

Note: Safe working loads for single installations under static loading should not exceed 25% of the ultimate load capacity.

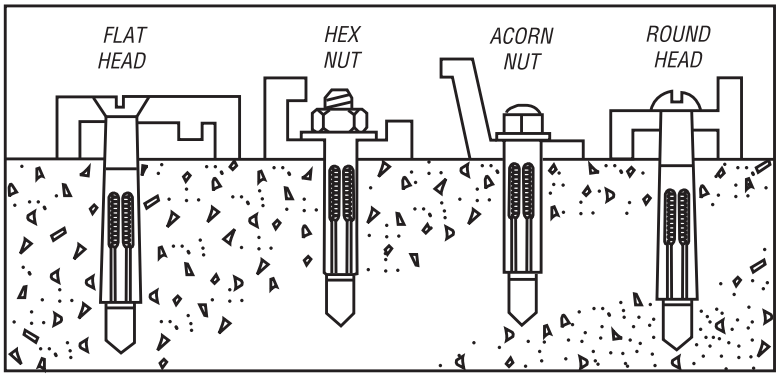
Wedge And Epoxy Style Anchors

MKT

- Zinc-plated steel
- Internally threaded
- Sold each

Wedge Style Drop-in Anchor

Wedge-Style Drop-In—With more holding capacity than standard drop-in anchors, wedge-style anchors can be used in a bottomless hole. There are no protruding studs to mar surfaces when removing or replacing. Require no special setting tools. Excellent for pipe work, equipment brackets, and handrails.



Epoxy Grip Anchor

Epoxy Grip—Set in-place with adhesives for stress-free anchoring that remains stress-free until force is applied to the bolt. Use in strength design applications, or where close edge distance is required, such as when installing handrails in concrete ramps, etc.

Note: Load values as listed are derived by using MKT VMZ adhesive only.

MKT RED HEAD CONCRETE ANCHORING SYSTEMS DEWALT ENGINEERED BY Powers FABORY

Sleeve Anchors

Filler sleeve eliminates galling between sleeve and tapered bolt head. For concrete, hollow or shallow masonry, or grout-filled blocks. Include nut and washer. Red Head Meet U.S. Government A-A-1922A standard.

Anchor

GA GRAINGER APPROVED MKT

Taper Bolt® Expansion Anchors with Nuts

Removable, reusable bolts include a finished, low-profile hex head. High tensile strength allows users to substitute smaller bolts, for reduced cost. Uniform expansion provides greater strength and holding power.

Drop-In Anchor, Non-Flanged

RED HEAD CONCRETE ANCHORING SYSTEMS

DEWALT ENGINEERED BY Powers | MKT

Drop-In Anchors, Tools, and Kits

- Drop-in anchor setting tool must be purchased separately (see table)

For use in pipe hanging, mounting valve and pipe, machinery mounting, anchoring shelf, and insulation applications, in concrete materials or solid concrete base materials.

Note: For load capacities in structural lightweight aggregate concrete, refer to ICBO Report No. 1372. Safe working loads for single installations under static loading should not exceed 25% of the ultimate load conditions.

Screw Anchors

FABORY DEWALT ENGINEERED BY Powers

- Steel
- Drill bit size = anchor dia.
- Hex washer head

High-strength heavy-duty anchors are for use in both cracked and uncracked concrete. Easily installed with standard-size drill bits; removable, for temporary anchoring. Vibration- and shock-resistant. For use in fastening conveyors, pallet racking, racking guards, motors, bracing, piping, ladders, fencing, beams, angles, or dimensional lumber to concrete or masonry.

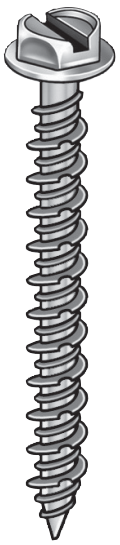
FABORY
GA GRAINGER APPROVED
RED HEAD CONCRETE ANCHORING SYSTEMS



Masonry Anchors

- For wood-to-concrete applications

Easy-to-install anchors can be quickly removed. Notched high-low threads cut into masonry for greater stability and pull-out values.

Tapered shank provides a wedging action for a strong, reliable hold. Accommodate close-to-edge applications. Superior pull-out and shear strengths.

Note: Not recommended for use with aluminum when moisture may be present.

Concrete Deck Inserts

- Steel construction with zinc plated finish
- 8" length
- 12" flange width

Inserts have pre-mounted self-drilling screws and a lengthened "T" brace, to allow simple and easy installation in concrete-filled metal deck assemblies, in a variety of positions. A threaded bolt permits precise height adjustment and helps guarantee the minimum embedment depth. UL Listed. Meet ICC-ES, ESR-3958, IBC 2009, 2012, 2015, IRC 2009, 2012, 2015, FM standards.

Crimp, Hammer, and Split-Drive Anchors

Tamper-resistant light- to medium-duty anchors allow hammer-in installation and multiple head configurations. Install in concrete, grout-filled block, and stone. Duplex-head anchors are for temporary fastening and can be removed using a claw hammer. Sup-R-Coat electroplate and galvanized finishes are for use in corrosive environments, or with ACQ lumber.

Crimp Drive—Preformed curvature along shaft expands to secure anchor. Installs with a standard hammer into concrete and grout-filled block.

Sup-R-Split® Hammer Drive—High-strength, heat-treated 1-pc. steel anchors are hammer-drive, friction-set; can be used for attaching wood or forming to solid concrete.

Note: Not approved for use in seismic applications.

Split-Drive—Install in concrete, grout-filled block, and stone. Duplex-head anchors are designed for temporary fastening and can be removed by using a claw hammer.

Shower Rod Anchor
No. 6UTD3

WINGITS®
The Solutions Company

Shower and Grab Bar Anchors

Shower Rod Anchor—Use with crescent and oval curved shower rods when there is insufficient structural blocking. Installs quickly into any hollow wall substrate up to 1¼" thick. Made of fire-retardant plastic material. Includes 4 stainless steel screws, 4 wings, and waterproof adhesive tape.

Grab Bar Anchors—Watertight installation eliminates blocking, even over grout lines in drywall with tile. No. 6UTC8 is rated up to 600 lb. and No. 6UTC7 is rated up to 800 lb. Each includes stainless steel screws. Meet ADA guidelines and commercial building codes. Installation into bare ½" drywall is not compliant with commercial building codes.

Wall and Tile Drill Bits and Sets—Precision bits cut fast, clean holes to install anchors in ceramic wall tile, wallboard, glass, steel, marble, and plaster. Made of industrial carbide.

Hollow-Wall Anchor

Hollow-Wall Anchor, Self Setting

Hollow-Wall and Caulking Anchors

Caulking Anchor

For light-duty applications.

Hollow-Wall Anchors—Easy-to-install anchors expand behind the wallboard.

Hollow-Wall Anchors, Self Setting—Nos. 11K362 and 11K363 require no predrilling; with pointed tip, anchor drives into wall.

Caulking Anchors—Zamac Cone with 3% to 5% Antimonial Lead Expander. For use with hollow-walls, brick, and block.

FABORY WINGITS® The Solutions Company WallClaw Anchors

Hollow-Wall and Drywall Anchors

Hammer-In Drywall Anchors—Install with no drilling necessary. Easy to remove, leaving only a tiny slit of a hole. Include anchors and screws. Meet ASTM E488 standard.

Hollow-Wall Anchors—Heavy-duty hollow-wall plastic anchors are designed for use in plaster, wallboard, concrete block or hollow tile. Feature 5/16" drill size and easily adjust to accommodate wall thickness up to 2 1/2" when using a short bolt.

MASTER Anchor™ Hollow Wall Anchors—Structural plastic and stainless steel anchors secure objects up to 300 lb. in drywall and will work in holes created by other anchors' failure. Objects can be easily repositioned without loss of anchor integrity. Each includes faceplate, tape, and wings.

8-32 Thread Size supports most bathroom accessories. Can also be used for guest room window dressings, heavy drapery rods, shelving, cabinets, pedestal sinks, dispensers, coat hooks, railings, and most wall-mount accessories with 1" base or larger.

10-32 Thread Size supports low-profile or tilting-mount flatscreen TVs, bathroom partitions, commercial products, and electrical panel boxes.

Self-Drilling Drywall Anchors—Preserve drywall integrity at installation and when screws are removed. Deep thread provides strong engagement in 3/8", 1/2", and 5/8" drywall. No predrilling or hole preparation necessary. Can be easily backed out.

- For plastic use #8 sheet metal screws

Countertop Equipment No. 12C141

EARTHQUAKE HOLD!™

Seismic Bracing Fasteners

Earthquake fasteners secure file cabinets, top heavy furniture, lab equipment, hospital equipment and office equipment that is required for IBC compliance.

FLOOR-MOUNT

Corner bracket is used for equipment with round/square legs or corners without legs. Z-brackets are used with equipment that have adjustable legs. Ratchet straps are used for multidoor refrigerators, freezers, and large floor equipment.

WALL-MOUNT

Flammable cabinet strut fastener secures flammable and toxic corrosive cabinets to wall stud. Wall strap is used for copiers and medium-size equipment. File cabinet strap is used for file cabinets, storage cabinets, and other types of similar cabinets. Ganging file cabinet straps are used for ganging file cabinets and similar cabinets together. Equipment wall straps are used for strapping kitchen refrigerators, freezers, and other similar sized items. Cart-to-wall are used for carts, metro racks, and tubular furniture. Strut straps secure refrigerators, freezers, and similar items. Adhesive plate assemblies secure large counter top equipment, refrigerators, and freezers. Steel furniture cable secures tall and top-heavy furniture to wall.

COUNTERTOP

Equipment fasteners are used for countertop and desktop equipment. HPLC Stack fastener kits are used for countertop and desktop stacked equipment. Lasso Strap fasteners are used for countertop and desktop pedestal equipment.

SPECIALTY

Gel pad seismic fastener is used for flat-bottomed equipment weighing less than 25 lb.

RED HEAD® CONCRETE ANCHORING SYSTEMS | SIMPSON Strong-Tie®

Anchor Adhesives

A7 Acrylic—All-weather formula holds tight at low temperatures. Fast-curing adhesive works in 35 min. at 60°F. Product is not ration mix-sensitive and is ideal for use in damp holes and underwater applications. Single formula for both hollow and solid base materials. Nondrip, nonsag, easy cleanup. Temp. range: 0° to 110°F.

Structural Anchoring Adhesives—High-strength, fast-setting 10:1 ratio. For threaded rod anchoring or rebar doweling. Meet ASTM C881 standard.

- Cure time: 24 hrs. @ 0°F, 30 min @ 70°F

Mixing Nozzle for C6P-20, overall length 10"	Red Head	**30EC83**	1
A7 Nozzle - For Use with 5- and 8-Oz. Cartridge Nos. 5HE66 and 4UJ69	Red Head	**4UJ68**	1
Plastic, 12 Element, For Use With AT Anchoring Adhesive, 4ZDD4, 4ZDD5, 4ZDD6	Simpson Strong-Tie Anchor Systems	**39H821**	5
Acrylic Adhesive Dispensers			
Metal Injection Tool - For Use with A7 10-Oz. Cartridge No. 1PJB6	Red Head	**1ZNK9**	1

Spin-In

Stud Assembly

Chemical Anchor Capsules and Stud Assemblies

MKT

- Cure time: 10 to 20 min.
- Mixing ratio 7:1

Premeasured adhesive can be double stacked and require no installation tool. Glass capsules are made from polyester resin, quartz sand, and benzoyl peroxide hardener. Sand and aggregate mixture is closest to natural concrete. Spin-In are for chamfered threaded rod and rebar. Stud assemblies are zinc-plated carbon steel.

O-Ring Information

DEFINITIONS

AS568 Dash Number—A universal standard that defines the sizes and tolerances for O-rings.

Durometer/Hardness—Elastomer material hardness is referred to as "durometer" within a material, the higher durometer number, the harder the material.

PTFE and Neoprene O-Rings

- PTFE operating temp.: -300° to 500°F
- Neoprene operating temp.: -40° to 225°F

Round cross-section. Neoprene O-rings meet SAE J200 and ASTM D2000 standards.

Note: Polyurethane and FEP encapsulated O-rings with silicone or Viton® are also available; on Grainger.com®, search for "polyurethane O-rings", "FEP encapsulated with silicone O-rings", or "FEP encapsulated with Viton® O-rings."

Buna N and Viton® O-Rings

Standard O-rings can be used for sealing valves, faucets, engines, machines, and more. Round cross-section. Medium-hard. Meet SAE J200, ASTM D2000.

Note: Additional O-ring durometers and materials available; on Grainger.com®, search for "Buna N 90 durometers O-rings", "Viton® 90 durometer O-rings", "Silicone O-rings", or "EPDM O-rings."

Dash No.	Inside Dia.	Outside Dia.	BUNA N - BLACK 70 DUROMETER SHORE A Item No.	Pkg. Qty.	VITON® - BLACK 75 DUROMETER SHORE A Item No.	Pkg. Qty.

Key Stock Information

KEY STOCK

Step (Offset)

Precision milled with steps notched in at regular intervals for repairing sprockets, gears, and pulleys.

KEYS

A key is a small metal block or wedge inserted between a shaft and the hub of a pulley, gear, sprocket, or other rotating power device. The key provides driving torque and prevents movement. One part of the key fits into a precut slot in the shaft called a key seat. The remainder slides into a groove in the hub called a keyway.

Machine

Elongated keys feature rounded ends, square ends, or tapered gib heads.

Woodruff

Flat, semicircular keys that rock into place and adjust to an angular spine without coming unseated.

Key Stock Assortments

GA GRAINGER APPROVED ITW Bee Leitzke

Packaged in a sturdy standable chipboard container.

No. of Pieces	Material	Includes	Item No.

Woodruff Keys

- Tensile strength: 72,000 psi
- Length tolerance: +0.000 to -0.010

Made of medium carbon steel. Remountable machinery keys can withstand great strain; designed to be installed deep into shafts and firmly embedded.

Step Key Stock

Zinc-plated 1018 grade carbon steel key stock works on couplings, sheaves, sprockets and pulleys.

Use Type 1 for repair and salvage of damaged keys in shafts.

Use Type 2 when mating mismatched keyways, gears, and shafts.

Dimensions A	B	C	D	Item No.

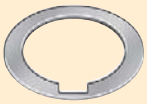
Shim Information

Shims are precisely gauged in multiple thicknesses to provide accurate spacing for a variety of uses:

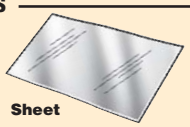


- Equipment leveling during installation
- Tool and die setup and alignment
- Machine assembly, repair, and maintenance
- Mounting, leveling, and aligning motors and pumps

SHIM TYPES

Arbor Shims

Preformed shims that provide accurate spacing of grinding tools, saws, gang cutters, slitting blades, and milling cutters. Do not have keyways.



Arbor Spacers

Preformed, notched shims that fit over shaft keys to hold the shim or bushing in place. Keyways conform to American standards.

Thickness Gauges

Narrow shims that are used whenever it is required to set close spacing or to check extremely tight tolerances.

Sheet

Roll

Slotted Shim

Slotted Shim with Tab

Shim Stock

Easy to form and fabricate, shim **Rolls** or **Sheets** can be cut, stamped, bored, milled, sheared, and drilled into almost any shape required to make custom shims.

Slotted Shims

Help solve alignment and leveling problems, and eliminate misalignment of expensive machines. End tabs help prevent workers from placing hands under machinery.

Shim Stock—Rolls

Note: Additional sizes are available; call 1-800-GRAINGER (472-4643).

Plastic Shim Stock—14-Pc. Sheet Assortments

- Contain 1 pc. of each thickness
- Easy to cut, oil-resistant, and nonconductive to electricity

Each thickness is indicated by a different shim color. Thickness tolerances to industry standards. Use for gaskets, special parts, and various manufacturing applications.

High-Carbon Spring Steel
No. 5XE66

PRECISION BRAND

Thickness Gage Assortments

All blades except plastic are etched with English and metric thickness measurements. Steel, brass, and stainless steel blades come packed in individual blade pockets; plastic blades are riveted together.

Plastic—Noncorrosive, nonconductive, nonsparking, and nonmarring; blades are color-coded by thickness and riveted together.

High-Carbon Spring Steel—With rounded ends and smooth edges.

260 Alloy Brass—Nonmagnetic, nonsparking blades made from 260 alloy. With rounded ends and smooth edges.

301 Stainless Steel—Corrosion-resistant stainless steel is a good conductor, slightly magnetic, and withstands high temperatures.

Arbor Spacer
No. 5FE86

Arbor Shims and Spacers

Use for fast, accurate spacing of milling cutters, gang cutters, saws, slitting blades, and grinding tools. Color-coded PVC Shims are made from a high-quality plastic material. Color coding eliminates need for micrometer, saves time, and reduces error. They are nonmagnetic, nonconductive, and corrosion resistant. High-quality Steel Shim is made from low-carbon, cold-rolled, full-hard, steel. Arbor Spacers are used for keyed applications. Save time over remachining. Packaged in airtight poly bag.

Slotted Shim Assortments

Used for aligning and leveling equipment. Hardened 302/304 stainless steel material resists rust and corrosion. Sizes A to D have a tab for easy gripping. Sizes E and H are not tabbed. 260-pc. and 130-pc. kits come packed in a latching metal box. 80-pc. kits come packed in a sturdy reusable carton.

Shim Stock Assortments

Slotted shims 0.001" through 0.031" have the tightest tolerances the industry can provide. Sizes 0.050" through 0.125" are made from re-rolled material, which reduces thickness tolerances to ±0.002". To prevent soft foot problems, 0.050" through 0.125" shims are quality processed to ensure flatness.

Individual Slotted Shims with Tabs

Stainless steel shims help improve motor, pump, generator, and other plant machinery alignment; won't rust or corrode. All sizes have tabs with holes, for easier, safer installation and removal. All shims conform to standard bolt and stud size. Each is marked with thickness in decimal and metric.

Aluminum Information

Soft, lightweight, corrosion-resistant alloy conducts both heat and electricity.

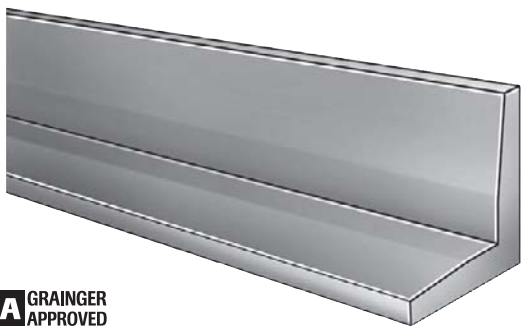
ALUMINUM TEMPERS

H14 (½ Hard)
Material is strain-hardened only (without additional thermal treatment) to a half-hard temper.

H22 (¼ Hard)
Material is strain-hardened and partially annealed to a quarter-hard condition.

H32 (¼ Hard)
Material is strain-hardened and mechanical properties are stabilized with supplementary thermal treatment to a quarter-hard temper.

T52
Material resists corrosion and can be formed, machined, and welded. Aluminum rods are lightweight and suitable for braces, cross members, frames, ornamental work, railings, and supports. Rods can be drilled, machined, punched, and sawed.



T6
Material is solution heat treated and then artificially aged.

T651
Material is solution heat treated, artificially aged, and then stretch-stress relieved. Refers to plates and cold-finished bars and rods.

T6511
Extruded material is solution heat treated, artificially aged, and then stretch-stress relieved.

ALUMINUM ROLLS AND SHEETS

Soft-tempered sheets and rolls are good for packaging and laminations. Sheets are for hair foil, laboratory foil, food applications. Rolls are excellent for heat exchangers, fin stock, chemical equipment, metal stampings, transformers, moisture barriers, spinning, and nameplates. Hard-tempered rolls are made from higher-strength material that holds its shape after forming. For heat shielding, RFI and EFI shielding, stamping, nameplate, and HVAC. Meet ASTM B209 standards.

STAINLESS STEEL FOIL ROLLS

Nonmagnetic rolls have good weldability and formability. Frequently used in heat treating, moisture barriers, chemical tanks, heat exchangers, fin stock, chemical equipment, metal stampings, and shim stock. Alloy 304 is the most widely used. Alloy 309 has better temperature resistance. Alloy 321 has titanium added for superior corrosion resistance and weldability. Tensile strength: 75,000 psi. Yield strength: 25 to 30 psi. Meet ASTM A240 standards.

COPPER FOIL ROLLS—ALLOY 110

Form a corrosion-resistant green patina over time. Plain finish, soft temper. Commonly used in heat exchangers, fin stock, metal stampings, transformers, printed circuit boards, arts, crafts and construction. Tensile strength: 26,000 psi. Yield strength: 8000 psi. Meet ASTM B152 standards.

Carbon Steel—Cylindrical Rods

- 1045 alloy meets ASTM A108, UNS# G10450, AISI 1045
- 1018 alloy meets ASTM 108, UNS# G10180, AISI 1018
- 1144 alloy meets ASTM A311, UNS# G11440
- 12L14 alloy meets ASTM 108, UNS# G12144
- 1215 alloy meets ASTM 108, UNS# G12150, AISI 1215
- Length tolerance: 1-ft. ±1.000", 3-ft. ±3.000", 6-ft. ±6.000"

Precision 1045 centerless rounds have highly consistent dimensions and guaranteed tolerances. Machine-ready material increases throughput by helping to minimize preparation and setup times.

Note: Additional sizes are available; call 1-800-GRAINGER (472-4643).

GA GRAINGER APPROVED

Tool Steel—Drill Rods

- Length: 36"
- Length tolerance: +.125"/-.000"
- Standards: UNS T30102, SAE J437, ASTM A-681-94, FEDERAL QQT-570 REV C

A2 Grade is used to replace 01 Grade for applications requiring safer heat treatment, less distortion during hardening, and greater wear resistance. Exhibit less movement during heat treating. 01 Grade provides dimensional stability (low movement) during hardening and high hardness response from low quenching temperatures. W1 Grade are used where a simple heat treatment is more important than wear resistance or high dimensional stability during heat treating.

Note: Additional sizes and grades are available; call 1-800-GRAINGER (472-4643).

Tool Steel—Flat Stock

- 4142 Carbon Steel: UNS G41420, ASTM A-322
- A2 Grade and 01 Grade: , SAE J-437, ASTM A-681-07, FEDERAL QQT-570 REV C
- A2 Grade: UNS T30102
- 01 Grade: UNS T31501

4142 Carbon Steel is an alloy steel with added elements for good toughness and machinability in addition to fair wear resistance, formability, and weldability. A2 Grade is used to replace 01 Grade for applications requiring safer heat treatment, less distortion during hardening, and greater wear resistance. Exhibit less movement during heat treating. Low Carbon Steel features excellent formability and weldability, good machinability, and fair toughness and wear resistance. 01 Grade provides dimensional stability (low movement) during hardening and high hardness response from low quenching temperatures.

Note: Additional sizes and grades are available; call 1-800-GRAINGER (472-4643).

Stainless Steel Information

These low-maintenance materials are often used in applications where corrosion resistance is critical. Stainless steels have a higher resistance to rust in many natural and man-made environments; however, it is important to use the appropriate grade of steel regarding strength, hardness, and workability requirements. See page 2192 for Stainless Steel Perforated Sheets.

300 SERIES—AUSTENITIC CHROMIUM-NICKEL ALLOYS

Type 302—Same corrosion resistance as 304, with slightly higher strength due to additional carbon.

Type 303—Free-machining version of 304, via addition of sulfur and phosphorus.

Type 304—The most-common grade; the classic 18/8 stainless steel. Offers excellent machining and welding characteristics. Widely accepted in dairy, beverage, and food product industries where sanitation and cleanliness are essential.

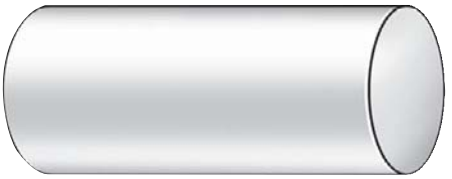
Type 316—The second most-common grade (after 304). Also known as marine-grade stainless steel, due to its increased resistance to chloride corrosion (compared to 304). It is resistant to the damaging effects of salts, reducing acids, and atmospheric and general corrosive conditions. For food and surgical stainless steel uses.

400C SERIES—FERRITIC AND MARTENISTIC CHROMIUM ALLOYS

Type 416—Easy to machine due to additional sulfur.

Type 430—Good formability, but with reduced temperature and corrosion resistance.

Type 440—A higher grade of cutlery steel, with more carbon, allowing better edge retention when properly heat treated. Can be hardened to above Rockwell 55 hardness.



600 SERIES—MARTENISTIC PRECIPITATION HARDENING ALLOYS

Type 630—Most common PH stainless; better known as 17-4 (17% chromium, 4% nickel).

Stainless Steel—Precision Ground Blanks

GRAINGER APPROVED

Precision blanks have highly consistent dimensions with guaranteed tolerances. Machine-ready materials increase throughput to help minimize preparation and setup times. Type 304 meets ASTM A240 standard. Type 316 meet ASTM A240 and ASTM A167 standards.

Note: Additional sizes are available; call 1-800-GRAINGER (472-4643).

Stainless Steel—Wire

- Sold in 1-lb. coils
- Excellent corrosion resistance

Smooth-finish, full-hard, Type 302 wire is spring-tempered for industrial uses including wire forms, control linkages, springs, armature binding, and ceramic cutting. Comes in an easy-to-use dispenser box. Meets ASTM A555, ASTM A313, ASTM A580, and AMS 5688 standards.

Carbon Steel—Music Wire

- Sold in 1-lb. coils

Spring-tempered wire is used for control linkages, ceramic cutting, armature binding, wire forms, springs, and other industrial uses. Packaged in an easy-to-use pull-dispenser box, except Nos. 15V232 and 15V233 come in tubes. Meets ASTM A228 standard.

High-Carbon Steel—1085 carbon steel alloy provides high tensile strength and high fatigue resistance.

Spring Steel—Full-hard, smooth-finish 300 Series stainless steel provides excellent corrosion resistance.

Bar Grating Information

Designed to provide safe, secure footing for many applications, bar grating is a strong choice for projects ranging from trenches to decking.

STAIR TREAD

Constructed like other bar grating, with stair-specific additional reinforcement and extra safety adjustments. A nosing is attached to the leading edge for increased edge visibility and slip resistance. Nosings may be grooved or checker plate (also known as diamond plate).

DEFINITIONS

Anchors—Devices that attach grating to its supports.

Band—A flat bar welded to the end of a grating panel or along the line of a cutout. Extends neither above nor below the bearing bars. A load-carrying band transfers the load from unsupported bearing bars to supported bearing bars. A trim band carries no load; used to improve appearance.

Bearing Bar—Load-carrying bar that extends in the direction of the span.

Cross Bar—The connecting bar that intersects or curves between the bearing bars and is welded, forged, or mechanically locked to them.

Cutout—An area of grating removed to clear an obstruction or let pipes, ducts, or columns pass through.

Grating—Open grid assembly of metal bars with bearing bars running in one direction, spaced by rigid attachment to cross bars that run perpendicularly or by bent connecting bars that extend between them.

Length—The span of grating or distance between points of grating support.

Width—Measured perpendicular to the bearing bars and in the same direction as the cross bars to determine the overall dimension of a grating panel.

SURFACES

Serrated—Grips shoes tightly for high slip resistance. Offers good slip protection in areas prone to oil or other hazardous materials.

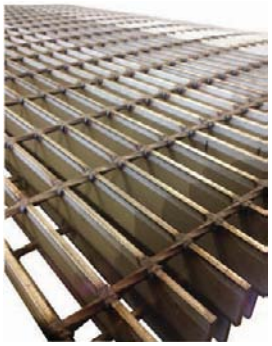
Smooth—All-purpose slip-resistant design's texture is less harsh underfoot than serrated.

MATERIALS

Aluminum—Good where a lightweight, corrosion-resistant material is desired.

Steel—Strong material is good to use if the environment is not expressly corrosive.

304 Stainless Steel—Stronger than aluminum, stainless steel provides superior corrosion and oxidation resistance.



JOINING METHODS

Pressure Locked (Dovetail)—Cross bars are mechanically locked to the bearing bars at their intersections. Permanent joints give long-lasting service under normal conditions.

Riveted—Straight bearing bars and bent connecting bars are riveted together at their contact points. Reliable and durable.

Swage Locked—A cost-effective and reliable pressure locking method.

Welded—Joined at the intersection of the bearing bars and cross bars. A versatile choice for light to moderate loads. The most common way aluminum bar grating is manufactured.

Fibertred® Corvex® Molded

Safe-T-Span® Industrial Pultruded Grating

Fibergrate® Molded Grating

Fiberplate® Molded Floor Plate

Fiberglass Information

MOLDED GRATING

- No more than ¼" deflection for recommended loads

Provide reliable corrosion-, impact-, and slip-resistant surfaces.

Corvex®—Premium polyester grating.

FGI-AM® Antimicrobial Premium Polyester—Food-grade formulation inhibits bacteria, fungus, and mildew growth. USDA accepted.

Micro-Mesh® Corvex®—Lightweight sheets for use where underfloor access and unobstructed airflow is required.

Vi-Corr® High Load Capacity—Engineered to carry forklift loads.

PULTRUDED GRATING

Safe-T-Span® Pedestrian and Industrial—Manufactured from a fire-retardant isophthalic polyester resin system (ISOFR).

MOLTRUDED® GRATING

Combines corrosion resistance of molded grating with longer span capacity of pultruded grating.

Rigidex™—Large openings allow greater airflow for walkways and platforms.

Aqua Grate®—Withstands corrosion and helps provide safety and comfort for walking with bare feet in high-traffic, public recreational areas. Meets ADA guidelines.

FIBERPLATE®

Solid composite panels offer bidirectional strength.

DEFINITIONS

Ultimate Capacity—Represents the weight which, if exceeded, will result in a complete and total failure of the grating.

ISOFR—Isophthalic Polyester Fire Retardant Resin formulation has a flame spread rating of 25 or less. Designed for applications where moderate exposure to corrosive elements exists.

VEFR—Vinyl Ester Fire Retardant Resin. For severe exposure to corrosive elements.

Applied Grit Top—Quartz grit applied to surface for slip-resistant footing.

Meniscus Top—Concave surface provides highly slip-resistant footing in most environments, including in wet or oily conditions.

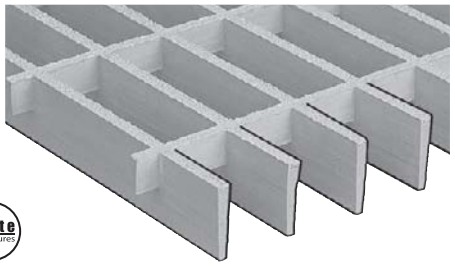
T-Shaped



Fibergrate Composite Structures

Safe-T-Span® Pultruded Grating

- Grit top

Nonconductive, lightweight grating is manufactured from a fire-retardant isophthalic polyester resin system (ISOFR). Corrosion- and slip-resistant material replaces steel bar grating. A high percentage of glass provides durability and high unidirectional strength and stiffness, making this the ideal solution for applications where longer support spans are required. Supports loads in the span direction only.

Fibergrate Composite Structures

Rigidex™ Moltruded Grating

- Corvex® polyester resin
- 1½" thick
- Light gray

Light-duty grating has large openings that allow greater airflow. For walkways and platforms.

Fibergrate Composite Structures

Aqua Grate®

- Light gray

Lightweight, pultruded pedestrian grating withstands corrosion. Helps provide safety and comfort for walking with bare feet in high-traffic, public recreational areas. Fine grit surface provides a high level of slip resistance. Protection against long-term UV exposure is provided by a synthetic surfacing veil and UV inhibitors in the resin formulation. Features nominal ¼" space between the 1½" wide bearing bars.

Cylindrical Rod

Fibergrate Composite Structures

Dynaform® Structural Shapes

- Temp. range: -100° to 150°F
- Tensile strength: 30,000 psi; except cylindrical rods are 100,000 psi

Resin material is ideal for platforms, walkways, and equipment support. Isophthalic polyester resin formulation (ISOFR) provides a low flame-spread rating of 25 or less (when tested according to ASTM E-84). Cylindrical rods are made of olive green ispophthalic polyester (ISO) resin which resists a wide array of chemicals and highly acidic conditions. Not fire retardant.

Foam Cord

NEOPRENE FOAM CORD

Resistant to chemicals, oil, and UV rays.

BUNA-N FOAM CORD

Excellent oil resistance, ideal for forming seals in engines and fuel systems. Also resists water, UV rays, and mild chemicals.

SILICONE FOAM CORD

Withstands a wide range of temperatures, commonly used for gaskets, heat shields, fire stops, cushions, and insulation. Rebounds to shape after long-term compression, has excellent resistance to UV rays and good resistance to oil and chemicals.

Water-Resistant Closed Cell Foam Rolls

Water-resistant closed-cell foam rolls are long sheets of synthetic material that can be cut-to-length for wrapping, packaging, and insulating applications. The foam is made up of cells that are closed off from one another to resist water penetration and provide thermal insulation.

Cross Linked Foam Sheets

GA GRAINGER APPROVED

Chemically Cross-Linked Polyethylene Foam is an extremely fine-celled foam, ideal for thermal insulation, construction expansion joints and industrial gaskets. It is also used as packaging and in flotation equipment, with its low moisture permeability and high buoyancy.

Open Cell Foam Strips

Synthetic material that can be cut-to-size for packaging, cushioning, and insulation applications where water-resistance isn't needed. Excellent shock absorption and sound insulation. Microcellular Polyurethane foam has excellent compression set resistance that will not break down with repeated use.

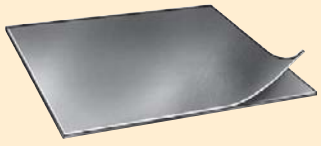
Rubber Information

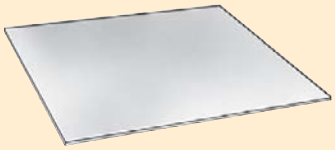
Rubber is frequently used in automotive and industrial machinery components, medical supplies, and building materials, as well as in vibration-dampening and leveling applications. Its elastic properties also make rubber ideal for a wide variety of sealing and insulation applications.

The specific type of rubber you need is determined upon your application, and depends upon:



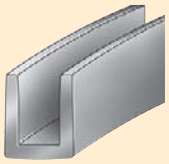
- Durometer (Duro.)/hardness
- Tensile strength
- Elongation (Elong.)
- Temperature range
- Resistance to chemicals, abrasion, and the elements

DEFINITIONS



Durometer (Duro.)/Hardness—Elastomer material hardness is referred to as "durometer" and is measured on the Shore scale (e.g., durometer: 70 Shore A). The higher the durometer number, the harder the material.

Elongation (Elong.)—The measured percent increase in original length of a specimen when it breaks.



Tensile strength—Measured in psi, tensile strength is the amount of force the material can withstand before rupturing.

Cord Stock and Foam Rubber Seals

- Temp. range: -20° to 150°F
- Black

Cord Stock—Water- and weather-resistant EPDM closed-cell sponge rubber seals are softer than rubber bulbs. Create an easy-to-close seal against dust, noise, and vibration. Solid round cord. Cut to length with scissors or knife.

Foam Rubber Seals—Water-resistant EPDM closed-cell sponge rubber seals are weather resistant. Create an easy-to-close seal against dust, noise, and vibration. Cut to length with scissors or knife. High-strength foam acrylic adhesive creates an airtight seal between the rubber and substrate and has low initial tack for easy repositioning. General-purpose pressure sensitive adhesive is ideal for light-duty applications.

Plastic

DEFINITIONS

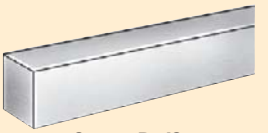
Compression Strength—The maximum stress a material can sustain under crush loading.

Flexural Strength—The ability to resist deformation under load. It is also referred to as bend strength or fracture strength.

Impact Strength—The amount of impact a material can withstand without cracking.

Continuous Use Temperature (CUT)—The maximum long-term service temperature (approximately 10 yr.) that a material can withstand, and retain at least 59% of its initial physical properties.

Heat Deflection Temperature (HDT) (ASTM D648)—The temperature at which a center-loaded bar deflects 0.010" under a stress of 66 or 264 psi.



Tensile Strength—The amount of pulling force a material can withstand without breaking.

Polymershapes

PVC Type I (Polyvinyl Chloride)

- Continuous use temp.: 140°F
- Heat deflection temp.: 116°F
- Impact strength: 0.4 lb. (sheets); 0.9 lb. (rods)
- Sheet stock meets standard ASTM D1784

Rated as self-extinguishing, PVC Type I has exceptional chemical resistance, good insulation properties, low moisture absorption, and high mechanical and tensile strengths. Can be easily cemented and welded. For use in structural building materials, plumbing applications, electrical insulation, signage, and modeling.

HDPE (High-Density Polyethylene)—Sheets and Round Rods

- Max. service temp.: 180°F
- Heat deflection temp.: 176°F

Easy-to-weld material has good insulating properties, good electrical/dielectric properties, and retains its toughness at low temperatures. Low steam permeability.

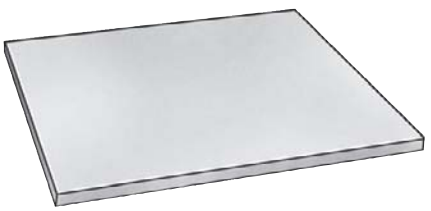
CUTTING BOARD SHEETS

- Tensile strength: 4000 psi
- Impact strength: 1.3 lb.

Specially formulated acid-resistant surface doesn't absorb moisture, odor, or bacteria, and won't dull knives. Resists chipping, peeling, cracking, and warping. Dishwasher safe. Meet FDA 21 CFR 177.52, ASTM D1822, USDA, and Canada AG compliant.

STANDARD SHEETS

- Tensile strength: 4600 psi
- Impact strength: 1.3 lb.



For use in pumps, valves, and in the medical and sewage industries. Food contact grade-off white is FDA and USDA compliant.

LDPE (Low-Density Polyethylene) Sheets

- Tensile strength: 1400 psi
- Continuous use temp.: 160°F
- Heat deflection temp.: 116°F

Extremely flexible low-density polyethylene is easy-to-clean, lightweight, and doesn't absorb moisture. Used for fabricated parts in which chemical and corrosion resistance is required. Can also be used for impact pads and thermoforming applications.

Cast-Acrylic Food Contact Grade Sheets

- Thickness Tolerance: ±10%
- Width/Length: ±0.25"
- Tensile strength: 10,500 psi
- Continuous use temp.: 180°F

Provide the highest chemical-resistance of any acrylic sheet. Superior weatherability and ease of fabrication.

Extruded Acrylic Sheets

- Tensile strength: 10,200 psi (clear); 11,030 psi (colors)
- Continuous use temp.: 170°F

High molecular weight lends itself well to thermoforming, bending, and flame polishing. Provide excellent weather and impact resistance with low heat loss. Used in fabrication, picture framing, skylights, displays, signage, and lighting applications.

PETG (Copolyester) Food Contact Grade Sheets

- Tensile strength: 7700 psi
- Continuous use temp.: 153°F

Glycol-modified polyethylene terephthalate can be vacuum-formed to high definition and excellent cold temperature impact strength. Accepts surface printing with offset or screen printing techniques. Film is masked to protect sheets during storage. Used in revolving merchandise racks, indoor signs, photo frames, and point-of-purchase, slat-wall inventory, greeting card, and menu displays.

Note: Bulk quantities are available on Grainger.com® for Nos. 1UTV8 and 1UTW1; search for "PETG plastic".

ABS (Acrylonitrile Butadiene Styrene) Sheets

- Tensile strength: 5400 psi
- Continuous use temp.: 158°F
- Heat deflection temp.: 221°F
- Impact strength: 7.5 lb.

Provides thermal and dimensional stability. Thermoformable haircell sheets have a textured surface that is excellent for hiding cuts and scratches. Used for machined, flat, and vacuum-formed parts in the food and refrigeration industries. Used to fabricate furniture, workstations, displays, guarding, and partitions.

Polypropylene—Food Contact-Grade Sheets and Round Rods

- Tensile strength: 3400 psi
- Continuous use temp.: 180°F
- Heat deflection temp.: 212°F

Polypropylene has excellent electrical properties and little or no moisture absorption. Carries light loads for a long period in widely varying temperatures. Frequently machined into parts requiring chemical or corrosion resistance, such as food packaging, laboratory equipment, automotive components, valves, and fittings. Meet FDA standards.

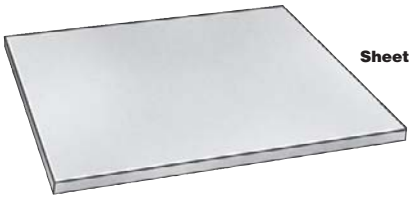
TIVAR® UHMW (Ultra-High Molecular Weight) Polyethylene Sheets

Corrosion-resistant.

Dryslide—Super-low friction material is electrostatic dissipative and helps reduce surging; for dusty environments. Won't mar packaging or products. Self-lubricating to help reduce noise.
- Tensile strength: 4800 psi
- Continuous use temp.: 180°F
- Heat deflection temp.: 116°F

High Operating Temperature (H.O.T.)—Extended operating temperature range inhibits oxidation. Abrasion-and chemical-resistant.
- Tensile strength: 5800 psi
- Continuous use temp.: 275°F
- Heat deflection temp.: 116°F

Grade 88—Abrasion-and chemical-resistant with low coefficient of friction. Reduces or eliminates arching and erratic flow; for bulk material handling applications.
- Tensile strength: 5600 psi
- Continuous use temp.: 180°F
- Heat deflection temp.: 116°F



Antistatic—Self-lubricating plastic protects against electrical charge buildup and reduces noise.
- Tensile strength: 5800 psi
- Continuous use temp.: 180°F
- Heat deflection temp.: 116°F

TIVAR®Eco—A blend of virgin and reclaimed TIVAR®. Provides excellent wear-resistance and UV stability.
- Tensile strength: 4500 psi
- Continuous use temp.: 180°F
- Heat deflection temp.: 116°F

UHMW (Ultra-High Molecular Weight) Polyethylene—Sheets, Round Rods, and Round Tubes

Material is moisture-, odor-, and stain-resistant. For wear applications, especially in contact with metals. Can be easily machined with ordinary wood-working tools. Widely used in industrial applications such as chute linings, dock bumpers, paper machine parts, and conveyor wear strips.

Standard

—Virgin food contact-grade. White color. FDA, USDA, and 3-A Dairy compliant.

- Tensile strength: 5800 psi
- Continuous use temp.: 180°F
- Heat deflection temp.: 116°F

Tube Stock

- Temp. range: -20° to 180°F
- Tensile strength: 5800 psi

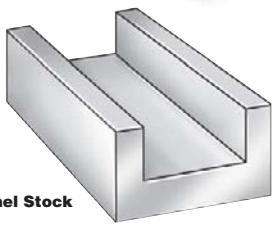
UHMW (Ultra-High Molecular Weight) Polyethylene—Conveyor Guide Rails and Wear Strips

- Tensile strength: 5800 psi
- Continuous use temp.: 180°F
- Heat deflection temp.: 116°F
- Length tolerance: +0.125/-0.000"
- All pieces sold in 10-ft. lengths



Self-lubricating, nontoxic material is chemical-, corrosion-, and wear-resistant, with a low coefficient of friction and excellent sliding properties. Used with modular belts, steel-grate bakery chains, and flat-top conveyor chains in food processing and dairy applications. White color.

Delrin® Acetal Homopolymer—Sheets and Round Rods

Sheet Stock

- Temp. range: 32° to 180°F

Delrin® 150—Food Contact Grade—Offers higher mechanical properties than general purpose acetals. May contain a low-density center, especially in larger cross-sections. For small-diameter, thin-walled bushings.

- Tensile strength: 11,000 psi
- Continuous use temp.: 180°F
- Heat deflection temp.: 250°F

Delrin® AF Blend—Low-Friction—This 2:1 combination of Delrin AF100 and Delrin 150 has PTFE fibers uniformly dispersed throughout; offers excellent sliding/friction properties and better wear characteristics than unfilled Delrin. Closer static and dynamic coefficient of friction allow higher-speed operation with reduced wear and virtually no slip-stick. For use in moving parts.

- Tensile strength: 8000 psi
- Continuous use temp.: 180°F
- Heat deflection temp.: 244°F

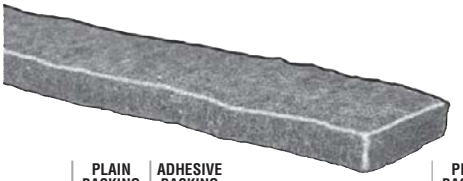
Felt Information

WOOL FELT

Naturally flame-resistant, Type 1 wool felts will still burn when exposed to an open flame, although they will self-extinguish once the flame is removed. Material is naturally abrasion- and vibration-resistant.

SYNTHETIC POLYESTER FELT



Economical synthetic felt. Ideal as a replacement for wool; however, polyester has lower sound-deadening, compression recovery, and wicking properties than wool.

FELT COMPARISON CHART

Material	Wool Fiber Content (%)	Durometer	Hardness	Tensile Strength (psi)	Resistance (psi)	Compression Recovery (%)	Max. Temp (°F)	Abrasion Resistance	Vibration Absorption	Acid Resistance	Alkalai Resistance (Dilute)	Solvent Resistance	Color

Burlap Fabric

MJ May MATERIAL SPECIALISTS INC.

Woven from natural jute fibers, this coarse fabric is 100% biodegradable and recyclable. Burlap has exceptional tensile strength and tear resistance. Large weave pattern results in exceptional breathability. Used in multiple industries including textile, construction, agriculture, and packaging.

Spray Adhesives

3M

Heavy-Duty 20 and Multipurpose 27—Fast-tack sprays cover a wide variety of substrates.

Pressure Sensitive 72—Industrial-grade formula is permanently tacky and repositionable. Can be used as pipe insulation lap adhesive.

Foam Fast 74—Features high coverage, soft bond lines, and immediate bonds.

Hi-Tack 76—High tack for 1-surface bonding.

Super 77™ Multipurpose—High-tack, fast-drying spray bonds quickly. Low soak-in for long-lasting bond.

Insulation 78—Foam adhesive bonds polystyrene with no surface degradation.

Rubber and Vinyl 80—Neoprene-based adhesive is plasticizer-resistant.

Hi-Strength 90—Creates a high-strength bond with excellent moisture resistance. Features variable-width lace spray pattern.

Shipping Mate Case Sealing™—Reseals cartons which come unglued or have to be opened and resealed. Holding strength in 10 sec. with carton-tearing strength in 5 min. Nonmisting, precise spray control.

Dry Layup Adhesive—This sprayable, synthetic elastomer-based adhesive is designed to reduce the amount of time required for dry layup of fiberglass.

Adhesive Remover, Citrus-Based—Leaves no residue and can replace mineral spirits, acetone, and other organic solvents for general cleaning.

CRC

Spray Adhesive—General-purpose, quick tack adhesive is ideal for labeling boxes and machinery, sealing packages for shipment, hanging insulation, repairing furniture, and displaying materials.

LOCTITE

Maximum Strength Headliner—Water-resistant aerosol formula is effective in contact with automotive fluids except gasoline. Sprays on clear. Air dries in 5 min.

SPRAYON

General Purpose and SP900 Heavy-Duty—Provide bonding for woodworking, installing insulation, and product line work. Dry quickly. General Purpose is foam-safe; delivered in a controlled mist spray pattern. SP900 Heavy-Duty forms permanent bonds; controlled lace spray pattern. VOC and MIR compliant.

GORILLA®

Heavy-duty, multipurpose, and easy-to-use adhesive forms a clear, permanent bond that is moisture resistant, photo safe, and can be used on projects both indoors and out. Wide pad nozzle and controlled, fine mist spray allow even application.

Epoxy Adhesives

Use epoxy on a wide range of formulations to join construction elements together and form a strong bond. These adhesives protect underlying surfaces from dirt and moisture.They are widely used due to their resistance to chemicals and environments, their high strength, and their ability to resist deformation under sustained load.

3M Scotch-Weld—All DP series adhere to metal and plastic. DP110 also bonds to rubber. DP420 also adheres to ceramic, glass, and wood. DP460 is also for use with ceramic and wood.

Devcon®—All bond to metal, glass, ceramic, concrete, and wood.

Gorilla Glue®—For use on ceramic, metal, and wood.

Loctite®—All Hysol Series are for use on metal and plastic. E-00CL™, E-00NS™, E-20HP™, E-30CL™, and E-90FL™ can also bond to ceramics and glass. E-60NC™ are for use with electronics. Fixmaster® Fast Cure Epoxy bonds to metal, ceramic, concrete, wood, glass, and plastic. Nos. 4KL23 and 3KE55 include 10 premeasured cups each.

J-B Weld®—All bond to metal and plastic. Weld and Professional Series also adhere to wood. Kwik Weld also bonds to fiberglass. Use Marine Weld for ceramic, fiberglass, glass, masonry, and wood.

Super Glue®—Quick Setting Metal is for use on aluminum, copper, stainless steel, brass, iron, and steel. Plastic Fusion® is for use on plastic, rubber, metal, concrete, and porcelain. All other epoxies are used for glass, metal, wood, rubber, and plastic.

Vibra-Tite®—All adhere to ceramic, metal, and wood.

Plastic Welder™

Depend® 330™ No. 4KL14

Devcon LOCTITE 3M

Acrylic Structural Adhesives

These durable acrylic adhesives combine the benefits of fast process speeds with tough, durable, and environmentally resistant bond strengths. They perform well against the elements because they are waterproof and stand up to UV exposure. Feature a higher tolerance for unprepared surfaces.

DEVCON

Plastic Welder™—Bonds most plastics, bare metals, and dissimilar substrates.

LOCTITE

Loctite® 324™/325™/326™—Bond to alnico, ferrite, and neodymium metals.

Depend® 330™—Bond to ceramic metal, plastic, and wood.

3M™

Bonds to low surface energy plastics (LSE), thermoplastics, composites, and metals.

1099 Scotch-Weld™ No. 3XH42

PR100 No. 400G26

3M

Plastic Adhesives

Plastic adhesives are resistant to weathering, oil, water, and plasticizer migration. They create a permanent bond. Fiberglass-reinforced polyester is ideal for long-lasting repairs.

1099 Scotch-Weld™—Bonds vinyl extrusions and sheeting, fabrics, foams, and many plastics.

4475 Industrial Plastic Adhesive—Bonds many ceramics, glass, leather, cloth, and vinyls.

PR100—Precision nozzle. Recommended for gasket attachment, small joint assembly, jewelry assembly, Orthopedics and footware.

Hysol® U-05FL™

LOCTITE

Urethane Adhesives

- 1.69-oz. cartridge
- Temp. range: -65° to 250°F

Urethane or polyurethane adhesives exhibit superior moisture and humidity resistance, as well as good toughness and flexibility. They bond a wide variety of materials, including most metals plastics, and composites.

Hysol® U-05FL™—Bonds a variety of metals, as well as plastics, glass, wood, and more. Can also be used for potting and encapsulating strain and heat sensitive electronic components.

Hysol® U-09FL™—Ideal for bonding polycarbonate and other plastics, glass, and metal. Suited for applications requiring a clear, nonyellowing bond line.

Hysol® U-09LV™—Bonds polycarbonate and other plastics, glass, and metal. Suited for applications requiring a clear, nonyellowing bond line.

Epoxy, Urethane, and Silicone Adhesive Packets

- 1:1 mixing ratio
- Full cure: 24 hr.
- Pkg. of 10 (3.5g) packets

EPOXY ADHESIVES
Chemical- and water-resistant once cured.

SILICONE ADHESIVES
Flexible once cured to form a bond that resists moisture, vibration, ozone, and temperature extremes.

URETHANE ADHESIVES
Fast-setting adhesives have excellent tear, abrasion, wear, and scratch resistance.

LOCTITE®

EA 3463 Metal Magic Steel™—Seals pipes, gas tanks, water tanks, and vessels. Epoxy stick can be kneaded.

EA 3471 Steel Putty—Steel-filled, nonsagging epoxy bonds to stainless steel, concrete, cast-iron, and other metals.

EA 3472 Steel Liquid—Steel-filled, pourable epoxy bonds to steel, cast-iron, stainless steel, and concrete.

EA 3473 Fast-Set Steel Putty—Trowelable putty sets quickly and is machinable when cured.

EA 3476 Stainless Steel Putty—Trowelable putty matches the thermal expansion coefficient of stainless steel.

EA 3478 Superior Metal—Renews and protects surfaces from corrosion and abrasion in harsh environments. Use on fuel and gas tanks, pipes, and elbows.

PC 7254 Aluminum Putty—Trowelable epoxy can be machined when cured.

Fixmaster 2000°F Putty—Trowelable, machinable putty fills and restores damaged and cracked metal.

J-B WELD®

SteelStik—Hand-kneadable and steel-reinforced putty. Requires no tools or prep time. Makes permanent repairs on wet and dry surfaces.

Waterweld—Hand-kneadable. Cures under water. For metal, plastics, and composites. Safe for use with PVC plumbing and potable water contact.

PlasticWeld—Drinking water-safe adhesive bonds to ABS, PVC, and CPVC. Rebuild automotive trim, fiberglass parts, and vinyl siding. Waterproof.

KwikWood™ Epoxy Putty—Repairs and rebuilds damaged, missing, and rotted wood quickly.

Wood Restore™ Repair Putty—Easy-to-sand putty fills cracks and voids in wood and can be painted in 1 hr. Use indoors or out.

PC PRODUCTS

PC-Plumbing®—For sealing plumbing components with potable water contact. Cures wet or dry. Waterproof after cured. Use on PVC, ABS, stainless steel, copper, galvanized, black pipes, and tubing.

SUPER GLUE®

Steel Repair and Filler—Repairs holes and cracks. Can be drilled, filed, or sanded after curing. Resists boiling water, oil, and gasoline.

Vinyl and Leather Adhesive—Remains clear and flexible after curing.

HERCULES®

Mixes quickly and easily to form a permanent bond in 20 min. Adheres to almost all surfaces including metals, masonry, wood, glass, ceramic, and some plastics.

Belt/Rubber Repair and Etching/Cleaning Solutions

LOCTITE®

- Up to 180°F

URETHANE BELT REPAIR

Abrasion-, corrosion-, and impact-resistant products repair conveyor belts and damaged rubber equipment. Nonshrinking and completely unaffected by oil, grease, and water.

MR Flex 80™ Putty Pourable Repair Compound—Rebuilds and repairs rubber parts and lines in pumps. Trowelable, 2-part putty bonds to metal, concrete, rubber, and some plastics.

MR Flex 80™ Liquid Repair Compound—Castable, 2-part urethane makes molds, fixtures, and expansion joints. Use for nonscratching holding fixtures.

Fixmaster® Rapid Rubber Repair Urethane—Premium-quality belt repair for damaged rubber equipment. Quickly and easily repairs with the same durability and flexibility as the belt.

ETCHING AND CLEANING SOLUTIONS

For use with Rapid Rubber Repair No. 2WKR2. SS FM Etching Agent Activator etches surfaces for better bonding of urethanes. SF 8220 Flex™ Cleaner is a colorless liquid designed to thoroughly clean rubber, urethane, or metal surfaces before cleaning. Nontoxic formula dries quickly and leaves no residue. One-component liquid cures at room temperature and requires no mixing.

Threadlocker Guide

Threadlockers significantly increase the reliability of threaded fasteners. Liquid fills gaps between threads to help form solid, unitized assemblies. They help prevent fasteners from loosening due to vibration and protect against rust and corrosion. Depending on the formula, threadlockers can be primerless and oil tolerant.

Color	Strength Level	Disassembly	Removable With	Full Cure Time	Optium Temp. Ranges	For Fastener Diameter
Purple	Low	Removable	Hand Tools	24 Hour	-65° to 300°F	Up to ¼" (6mm)
Green	Medium	Removable	Hand Tools	24 Hour	-65° to 300°F	Up to ½" (12mm)
Blue	Medium	Removable	Hand Tools	24 Hour	-65° to 300°F	¼" to ¾" (6mm to 22mm)
Red	High	Permanent*	Heat and Hand Tools	24 Hour	-65° to 550°F	Up to ½" (36mm)
Black	High	Permanent*	Heat and Hand Tools	24 Hour	-65° to 300°F	Larger than ⅞"

*No threadlocker is permanent. High strength can be removed using standard hand tools following direct exposure to temperatures of 450°F.

Threadlockers

Primerless Threadlockers—Allow you to apply threadlocking material without using priming activators.

Threadlockers—Help prevent damage to fasteners by sealing air gaps to stop fasteners from loosening. Primers are often suggested when using threadlockers to help increase adhesion to fasteners. For a selection of primers, see page 2223.

Wicking-Grade Threadlockers—Ideal for threaded assemblies, these low viscosity threadlockers flow or wick themselves onto threads. Meet MIL-S-46163A for existing designs. No. 49CF71 also meets ASTM D 5363 for new design.

HIGH LUBRICITY

High-strength formula with increased lubricity reduces friction and achieves proper clamp load, even when exposed to vibration. Use for permanent applications on large metal fasteners over ⅞" dia.

PLASTIC FASTENER

Low-strength and fast-curing threadocker can be used as a tamperproofing agent for screw heads.

STICK

Semisolid stick formula won't spill or leak.

TAPE

Offers convenience with no mess. Works with 3 wraps on threaded bolts every time.

LOCTITE

Retaining Compounds

Retaining compounds fill the space between parts to hold them in place with a high-strength bond. They harden in the absence of air (called anaerobic adhesives). Full cure in 24 hr.

Low-Viscosity—Bond rigid metal assemblies. Fixture in 10 min. Agency approvals: CFIA, MIL-R-46082B for existing designs, ASTMD-5363 for new designs.

High-Temperature—High-viscosity for repairing valve sleeves, retaining valve seats, and affixing cylindrical liners. Fixture in 30 min. CFIA listed.

Note: Require a secondary heat cure at 356°F (180°C) to generate high-temp. resistance.

High-Strength—Room temp.-curing adhesives are for pulleys, cams, flywheels, and rotor-to-shaft bonds. Fixture in 10 min. NSF/ANSI-61 certified, ABS approved, and CFIA listed.

Specialty—Nonrun paste fills metal surface imperfections and repairs worn areas to keep machinery running. Repairs worn shafts, splines, keyways, and housings. Fixtures in 20 min. CFIA listed.

Pipe Thread Sealants and Repair Kits

THREAD SEALANT

Anaerobic thread sealants are applied to a metal fastener and installed into a metal assembly. In the absence of air and the presence of active metals, the anaerobic compound will cure into a thermoset plastic, thus locking and sealing the fastener in place.

REFRIGERANT PIPE SEALANT

Refrigerant Pipe Sealant has excellent solvent resistance on threaded fittings and pipes up to 3" dia. It has good chemical resistance and is recommended for refrigeration systems and service with aggressive chemicals.

PIPE THREAD SEALANT

Seal threaded pipe fittings propery and block the leak path along the threads. Help make sure pipe joints are pressure-tight and waterproof.

PIPE THREAD REPAIR KITS

Make permanent repairs to stripped, threaded assemblies in 5 min. Allow up to 1538 in.-lb. torque on a 1" bolt. Resist most shop fluids.

PIPE JOINT COMPOUND

Pliable compound seals oily fittings and resists loosening by thermal expansion. Use on water, steam, oil, and fuel lines.

3M | GORILLA | LOCTITE | THE ORIGINAL SUPER GLUE | Vibra-TITE

Super Glue Instant Adhesives

- "Multipurpose" items fill gaps up to 0.004"
- "Toughened" items provide increased impact and shear strength
- "Gap-Filling" set slowly, allowing adjustment and filling up to 0.008"
- "Close-Fitting Parts" are solvent-free with high tensile and shear strengths for tight tolerance
- "Porous Surfaces" bond a wide range of uneven and absorbent substrates

Instant adhesives provide very strong bonds and start curing almost immediately.

Anaerobic-, Poly-, Silicone-, and Solvent-Based Sealants

Anaerobic-Based Flange—Rigid gasketing material remains liquid when exposed to air, but cures to a solid bond when confined between 2 mating flanges. For rigid flanges.

Polyurethane-Based—Sealant won't harden or set, even at very high temperatures.

Silicone-Based—Highly flexible adhesive offers excellent weatherability, fluid and temperature resistance to meet key industry specifications.

Solvent-Based—Generally used as a gasket dressing to fill voids between a cut gasket and the parts being sealed.

Gasket Sealants

Sealants indicated as Low-VOC are low-solvent formulations that release significantly fewer harmful vapors than standard adhesives. No. 1TDX3 is an odorless, solvent-free adhesive for rigid or flexible flanges. Solvent-based, paste-like sealant No. 2EMY3 sets slowly to a pliable film and is best suited for nonrigid, vibrating assemblies. Resistant to gasoline and other solvents. General purpose Superflex® RTV Silicone Sealants Nos. 3KMY7, 3KNK3, and 3KMY8 cure at room temperature to form a tough rubber seal. Will not slump in overhead or vertical applications. Withstand extreme temperature cycling, UV light, and ozone. Cannot be painted.

Contact Construction Adhesives

CONTACT CEMENTS

A. Weldwood® Nonflammable— High solids polychloroprene-based, waterborne contact adhesive.

B. Weldwood® Original—A neoprene rubber that forms a permanent bond. For use with all laminate products. Adheres to wood, masonry, and most metals with no clamping required. High heat resistance.

C. Weldwood® Bottled—Strong cement bonds on contact.

D. Weldwood® Gel—Easy-to-use gel does not drip. No-mess formula is ideal for vertical and overhead surfaces. Easy spread for excellent coverage.

E. DAP® Landau Top & Trim High Heat-Resistant—Automotive interior cement adheres headliners, fabric, and other materials during refurbishment. Apply with hot or cold spray equipment.

F. Acrylic Contact Cement— Solvent-based single-component adhesive remains flexible after cure. Dries clear to light yellow in 30 min. Full cure in 24 hr. Use on tile, rubber, wood, metal, laminates, and most plastics.

G. 3M™ Neoprene Contact Adhesive 10—Air-drying neoprene adhesive bonds immediately and permanently upon contact pressure without clamping or texturizing.

H. 3M™ Neoprene High-Performance Contact Adhesive 1357—Neoprene-based brush- or spray-coat adhesive bonds metal, wood, rubber (except EPDM), urethane foam, acrylic, and ABS. Meet Fed. Spec. MMM-A-121. Nos. 5E127 and 5E130 also meet MIL-A-21366A.

I. Pliobond 25/35 Nitrile Special Purpose Adhesive—All-purpose thermosetting contact adhesives have pigment-reinforced synthetic rubber and synthetic plastic resin solids; provide a permanent bond that won't get brittle with age.

J. 3M™ Fastbond™ Contact Adhesive 30-NF—High water-dispersed sprayable contact adhesive for high immediate bond strength and long bonding range. Green adhesive dries to green. Neutral dries to clear. Nonflammable in wet state. Post-formable and heat resistant.

K. 3M™ Fastbond™ Pressure Sensitive Adhesive 4224NF—Water-based carpet adhesive is plasticizer resistant and has an aggressive tack. Repositionable for adhering carpet matting tiles to the floor. For use with glass, paper, steel, galvanized steel, bare and clad aluminum, fabric, and foam.

L. Loctite® MR 5414 Black Contact Adhesive—Professional, solvent-based adhesive with neoprene blends in with black-colored fabric, rubber, weatherstripping, and other porous materials. Withstands temperature extremes and is resistant to gasoline, kerosene, and other solvents. Fast drying and waterproof. Allows repositioning of the parts after initial contact.

FLOORING ADHESIVES

M. DAP® 4000 Subfloor VOC, Subfloor and Deck—Bonds wet, frozen, and treated lumber.

N. DAP® 7000 Subfloor and Deck—Solvent-based formulation reduces nailing requirements, floor squeaks, and nail pops. Easy gunning.

O. DAP® 4000 Subfloor and Deck—Forms a permanent bond on wet, frozen, and treated lumber. Reduces nailing requirements.

P. Weldwood® Multipurpose— Trowel-grade adhesive bonds many types of floor coverings. Formula provides greater shrink resistance and allows for easy repositioning during installation. Water-resistant, low-odor adhesive is nonflammable and cleans up easily with water. Ideal for Interior use.

Q. Weldwood® Sheet Floor— Trowel-grade, latex-based formula is for installing synthetic, felt-backed resilient sheet goods.

R. Weldwood® Ceramic Tile—Trowel-grade, latex-based adhesive for installing ceramic and mosaic tile on floors, walls, and countertops.

S. Weldwood® Wood Floor— High solids, trowel-grade synthetic adhesive for installation of prefinished wood flooring.

Multipurpose/ Construction Sealants

3M 760 Hybrid Sealant—Thick paste bonds to glass, metal, wood, concrete, and ceramic. UV resistant.

3M Polyurethane Construction Sealant 525—Adheres to expansion joints, metal, wood, aluminum and PVC joinery seams, clay and concrete roof tiles.

DAP Concrete 3.0™ Advanced Polymer Sealant—For wood, masonry, and concrete applications.

DAP Silicone Plus Premium Sealant—Seals wood, ceramic, and horizontal cracks, gaps and holes.

DAP Window, Door, and Exterior Sealant—Adheres to wood, aluminum, vinyl, plaster, drywall, masonry, stone, brick, glass, and concrete.

Dow Corning 700 Industrial Grade & 732 Multipurpose Sealants—Bonds concrete, glass, masonry, metal, and plastic.

GE SCS Silicone Contractors Sealant—Adheres to glass, plastic, granite, and sheet metal.

GE Contractors® SCS1000 Silicone Construction Sealant—For glass, metal, glazed surfaces, and many plastics.

No. 4KM87

GE Silicone II Gasket Sealant—Adheres to glass, metal, plastic, fiberglass, granite, concrete, and wood.

GE Silicone II™ Paintable Sealant—Use on siding, trim, moldings, patios, concrete, fiberglass, plastic, metal, and wood.

Loctite 5510 Sealant—High strength adhesive paste is used for elastic bonding and sealing on various substrates.

Loctite UR 7001 Urethane Sealant—Adheres to concrete, masonry, glass, plastics, wood, and aluminum.

Surebond SB-180 Sealant—Typical applications include sealing and glazing, plumbing, interior and exterior. Cures to the touch in an hour.

Surebond SB-170 Multi-Purpose Silicone Sealant—Adheres to hard-to-stick plastics, wood, PVC, vinyl, metal, glass, and painted surfaces.

Surebond SB-188 High-Temperature Silicone Sealant—Bonds to ceramic, glass, metal, plastic rubber, wood, fiberglass.

Roof and Gutter Sealants

Roof Asphalt Filler and Sealer—Forms watertight seal on wood, masonry, fiberglass, metal, and asphalt.

Butyl-Flex® Gutter and Flashing Sealant—Bonds concrete, metal, plastic, rubber, and wood. Resists weather, extreme temperatures, and shock.

Polyurethane Sealants—Provide superior adhesion to wood, metal, concrete, stone, aluminum, masonry, vinyl, fiberglass, plastic, and brick. Meet ASTM C920 Class 35.

Silicone II® Gutter and Flashing—Silicone sealant adheres to most aluminum, stainless steel, wood, masonry, brick, concrete, painted surfaces, vinyl, and plastic.

Silicone II Aluminum and Metal—Adheres to most aluminum, stainless steel, masonry, brick, concrete, granite, and metal. Resists extreme heat, UV rays, and freezing temperatures.

Geocel 4500 Roof Bonding Sealant—Bonds to many common substrates including asphalt shingles, steel, concrete, EPDM, primed TPO, primed PVC, Hypalon (black only), metal, and wood.

Elastomeric Acrylic Sealant—Use on concrete, drywall, glass, many plastics, masonry, metal, porcelain, stucco, vinyl, and wood.

Polyurethane Sealant No. 20VK39

Window/Door Caulks, Sealants, and Glazes

ACRYLIC

A. Concrete Caulk—Use with mortar, and masonry. Paintable; cleans easily with water. Indoor/outdoor use.

B. ALEX® Caulk—Adheres to wood, plaster, drywall, and masonry.

C. DYNAFLEX 230® Elastomeric Sealant—For crown molding and siding. Mildew-resistant when cured.

D. Window Glazing Caulk—For face glazing wood or metal frames. Weathertight seal.

E. MAX EXTRA Siliconized Acrylic Caulk—Mildew-resistant, paintable caulk for sealing interior and exterior windows, replacing window panes, and sealing cracks in the doorjamb or window seal.

BUTYL

F. SB-140 Skylight and Window Butyl Sealant—Flexible, one-part sealant is easy to remove and excellent for resealing and repairing leaks. Stays soft and malleable. Fast skinning and nonstaining.

HYBRID

G. ALEX PLUS® Caulk—Mildew-resistant and flexible.

H. Flexible Clear Sealant—Weatherproof and mildew- and UV-resistant. Adheres to concrete, glass, brick, wood, metal, and fiberglass.

I. ALEX Fast Dry® Caulk—Mildew-resistant. Paintable in 30 min.

J. Side Winder® Siding and Window Sealant—Adheres to vinyl, fiber, cement, aluminum, and wood. Permanently flexible. No shrinkage, low odor. Indoor/outdoor use.

K. ALEX PLUS® Sealant, Aerosol Can—Aerosol can provides excellent control without a caulk gun, for a smooth, consistent bead and no overflow.

POLYURETHANE

L. Polyurethane Sealant 540—One-part sealant cures fast with a joint movement capability ±25%. Nonstaining formula does not require mixing. Ideal for vertical and horizontal expansion joints, concrete control joints, precast and tilt-up construction, masonry expansion joints, aluminum curtain walls and storefronts, and submerged applications.

SILICONE

Flexible silicone provides a long-lasting, waterproof seal that is low odor and resists shrinking and cracking. It remains flexible after being dried or cured and can withstand higher temperatures.

M. 100% Silicone Window and Door Sealant—Seal resists cracking, crumbling, and chalking. Can be used to make gaskets. Mildew resistant. Indoor/outdoor use.

N. Silicone Plus™ Window and Door Sealant—Won't shrink or crack. Adheres to PVC, vinyl siding, and painted wood. Indoor/outdoor use.

O. Silicone Premuim Kitchen and Bath Sealant—For use on ceramic tile, glass, porcelain, and PVC in kitchen and bath applications.

P. Silicone I Sealant—Mold- and mildew-resistant sealant accommodates 25% movement in extension and compression with excellent recovery when joints shift. Low sag or slump allows application to overhead surfaces. Resistant to sun and freezing temperatures. Adheres to wood, metal, vinyl siding, drywall/plaster, glass, and plastic.

Q. Supreme Paintable Silicone—Fast-acting caulk can be painted with a brush after 30 min. and exposed to water in as little as 30 min.

R. Silicone I Window and Door Sealant—Adheres to most wood, metal, vinyl siding, drywall, plaster, glass, and plastic. Use on doors, siding, trim, molding, baseboards, and vents. Also use around wire, pipes, and other attic/basement applications. FDA approved.

S. Silicone II Window and Door Sealant—Twice the stretch of Silicone I. Withstands extreme joint movement.

T. Silicone II Window and Door Sealant—Stretches and compresses with joint movement.

DAP®

100% Silicone Sealant

One-component, acetoxy cure material is ideal for caulking and sealing. Provides a durable, watertight seal that won't crack or shrink. It offers long-lasting flexibility and is safe for incidental food contact. Cured sealant is mildew resistant.

Kitchen, Bath, and Plumbing High-Performance Sealant

Kwik Dry® formula is paintable and water-resistant in ½ hr. Waterproof seal with Microban protects against mold and mildew up to 10 yr.

Kitchen and Bath Sealant with Microban®

Antimicrobial protection fights mold, mildew, odors, and stains. Kwik Seal Plus® formula provides a watertight seal with maximum adhesion and flexibility.

Premium Kitchen and Bath Sealant

Low-odor silicone formula is water-resistant in ½ hr. Forms a flexible, waterproof seal with excellent adhesion.

Kwik Seal®

Acrylic formula is mold- and mildew-resistant. Dries tack-free in 15 min. Resists cracking, crumbling, and shrinking.

Latex caulk and sealant form a mildew-resistant, watertight seal. Water cleanup.

Phenoseal® Adhesive Caulk

Mildew-resistant and watertight seal. Water cleanup.

DOW CORNING

DOWSIL™ Silicone Base Clear Cartridge Sealant is for use on concrete, glass, masonry, metal, plastic, and wood. DOWSIL™ 786 RTV Sealant is designed to seal nonporous surfaces around showers, tubs, sinks, and plumbing fixtures where conditions of high humidity and temperature extremes exist.

GE

Waterproof sealants won't shrink or crack over time.

Silicone II Sealant

Nos. 3LA50, 4UH01, 3LA48, and 3LA49 are low odor and mildew resistant. Sealant remains permanently flexible. No. 22N770 is a flexible, mold- and mildew-resistant formula that accommodates 25% movement in extension and compression with excellent recovery. Useful for horizontal and vertical overhead surfaces. Nos. 5PWD3 and 5PWD4 feature low VOC.

Silicone II Supreme Sealant

Sealant is permanently flexible, won't corrode metals, is water-ready in ½ hr., and resists mold up to 10 yr. Mildew- and UV-resistant.

Silicone I Sealant

Keeps water away from kitchen and bath applications. Flexible formula is mold and mildew resistant. Accommodates 25% movement in extension and compression with excellent recovery when joints shift. Applies to horizontal or vertical overhead surfaces. For use on laminate, porcelain, glass, metal, plastic, granite, wood, and most ceramic tile.

Supreme Paintable Sealant

Modified silicone formula is ready for paint in ½ hr. Not sticky or stringy. Stays mold- and mildew-free for up to 10 yr.

HOMAX

Extra-wide caulk strip is a preshaped, flexible, peel-and-stick strip that seals out moisture that can damage walls by eliminating the gap where dirt can accumulate.

3M DOW CORNING LOCTITE®

Marine Sealants

Marine Adhesive Sealant Fast Cure 4000 UV and 4200—Flexible bond for wood, fiberglass, gelcoat, plastics, and metals. Use for boat hardware above or below water line. No. 1RWH9 has VOC levels that meet SCAQMD requirements.

Marine Adhesive Sealant 5200 and 5200 UV—Flexible sealant for wood, fiberglass, metal and most plastics.

550 Adhesive Sealant—Medium paste forms permanent elastic bond on concrete, wood, aluminum, and most lacquered metals, polyester, glass, and stone.

730 Hybrid Sealant—Bonds material with differing thermal expansion.

740 Hybrid Sealant—Elastic bond for concrete, wood, aluminium, most lacquered metals, polyester, glass, stone, and ceramic. Can replace rivets and other fasteners.

DOWSIL™ 733 Glass and Metal Sealant—Conventional acetoxy RTV sealant with adhesion promoter.

Loctite® Gasket Dressing SI 592™—For use as a permanent seal above or below the water line.

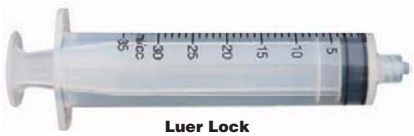
Battery Powered Caulk Guns



- **Variable-speed triggers**
- **360° rotating collar provides excellent bead control**

Carriage design allows the user to quickly and easily change between 10-oz., Quart, and Sausage-style material containers.

12V—Compact, lightweight guns provide up to 400 lb. of push force for dispensing everyday construction sealants and adhesives. Include auto-reversing anti-drip, seal puncture tool, and durable hang hook.

18V—All-metal gears provide 950 (Milwaukee®) or 1100 (Makita®) lb. of force for steady dispensing of the highest viscosity materials. Anti-drip mechanism instantly stops leaks. No. 14P345 kit includes a clear barrel for seeing remaining material and watching for bag wrap or blow-back. Makita models have an LED light.

Luer Lock Syringe

Luer Slip Syringe

GA GRAINGER APPROVED

Syringes

Syringes contain barrels, pistons, and rubber stoppers. Taper tip syringes can be cut shorter, widening the opening to increase flow. Air-operated syringes are designed for repetitive use. Tip caps are used to cover luer lock syringes.

Gorilla Glue®

- Full cure: 24 hr.

Dries White and All-Purpose Glue—Bonds wood, stone, metal, ceramic, and more. White dries faster. Waterproof.
- Temp. range: -40° to 212°F

Super Glue—Bonds to most common building materials. Anticlog cap with a metal pin inside ensures an airtight seal for maximum reusability.
- Temp. range: -65° to 220°F

Wood Glue—Bonds wood-to-wood without leaving an orange afterglow. FDA approved for indirect food contact.
- Temp. range: 0° to 150°F

DAP Weldwood® Titebond GREENchoice ADHESIVES

Wood Glues

DAP® WELDWOOD®

Carpenter's Glue—Sets fast, grips tight, and sands easily. Solvent resistant. Nontoxic.

Wood Glue—Powdered, urea formaldehyde activates by mixing with water and forms a high-strength bond. Low VOC. Meets Fed. Spec. A-A-3052.

TITEBOND® III ULTIMATE WOOD GLUE

Waterproof formula meets ANSI/HPVA Type I water-resistance specification. Has longer open assembly time and lower application temperature. Sands easily. Interior/exterior.

TITEBOND® II

Premium and Extend Wood Glue—Meet ANSI Type II water-resistance specification. Nos. 3KRU6 and 3KRU7 have a longer set time. Interior/exterior.

Wood Glue—Great for general woodworking with porous and semiporous materials. ANSI Type II.

TITEBOND® ORIGINAL WOOD GLUE

Aliphatic-resin glue sets quickly to reduce clamp time. Resists heat, solvents, and mildew. Nos. 3KRU4 and 4EML7 have a longer set time.

TITEBOND®

Quick & Thick, No Run/No Drip—Glue dries twice as fast and three times as thick as traditional PVAs. Bonds to multiple surfaces.

Polyurethane Wood Glue—Combines a long 20-min. working time with a short 45-min. clamping time. Waterproof formula is excellent for wood to wood, metals, ceramics, most plastics—porous and nonporous materials. ANSI Type I and Type II.

Gorilla Tape

Weatherproof, airtight tape is easy to tear by hand. For indoor and outdoor use. **Repair Tape—**Fix, patch, seal, hold, and protect almost any surface.

Double-Sided Tape—Bonds plastic, metal, wood, glass, brick, ceramic, and stone. No. 45DV48 holds up to 15 lb. on smooth and rough surfaces for easy hanging; No. 49UU23 is an industrial strength double-sided tape with a heavy duty bond. Holds up to 30 pounds. Ideal for indoor and outdoor projects and sticks to smooth and rough surfaces.

Duct Tape—Double-thick adhesive grips smooth, rough, and uneven surfaces. Withstands moisture, UV rays, and temperature extremes.

Hot Glue Guns and Sticks

CORDLESS GLUE GUNS

Master PortaPro® Glue Gun

Butane heat source has push-button piezo ignition, glue flow cutoff, fuel flow safety lock, and fuel-refill indicator. No. 1UBG6 includes 4 brass nozzles, eight ½" x 6" glue sticks, and plastic case.

ELECTRIC GLUE GUNS

12-Pc. Heavy-Duty Glue Gun Kit

Includes 3 special-use nozzles, nonstick work pad, 6 high-temperature glue sticks, wire stand, and carrying case.

DualMelt Pro™ Glue Gun Kit

Dual-temperature glue gun has On/Off light, protected nozzle, fold-out stand, cushion grip, slip-resistant trigger action, and auto shutoff.

Heavy-Duty Glue Guns

High temperature setting bonds cardboard, ceramics, leather, light metals, and wood. Low temperature setting bonds heat-sensitive parts such as fabrics, foam materials, and plastics.

SUREBONDER®

No. 36FL79 professional gun is a light-duty, high-temperature gun. Nos. 20YV40 and 20YV41 are medium-duty high-temperature guns. No. 20YV42 is designed with dual heaters and features a 2-min. quick heat-up time. No. 39AN01 is a high-temperature gun for fixed temperature applications. Heavy-duty gun No. 20YV44 features cartridge heaters with adjustable temperatures.

Bright

TiN

Chicago-Latrobe®

Production Grade Jobbers Length HSS Drill Bits, 118°

- Conventional point, except List# 150K, which is split point

Black oxide drills are for steel, stainless steel, and cast iron. Bright finish drills are for low carbon and softer metals such as aluminum. Left-hand helix drills are for machine spindles rotating counter-clockwise. Black oxide List#150K split point drills eliminate walking. TiN coated drills are for alloy steel, stainless steel, cast iron, brass, bronze, plastic and fiberglass.

TiN

CLE-LINE. WESTWARD

Maintenance Grade Parabolic Jobber Length HSS Drill Bits, 135°

- Notched point

Combination of parabolic flute form and point design produces tighter hole tolerances, increased chip-breaking action, and improved coolant flow for deep-hole drilling. Wide flute spacing results in tighter, more manageable chips and reduced chip packing.

Chicago-Latrobe®

Bright
List# 157

Production Grade Screw Machine Length HSS Drill Bits, 118°

- Conventional point

Shorter flute and overall length increase rigidity, resulting in less deflection, better hole accuracy, and longer tool life.

Left-hand drills are for drilling in conditions where the machine spindle rotates counterclockwise.

Chicago-Latrobe®

Production Grade Screw Machine Length Cobalt Drill Bits, 135°

- Split point
- Straw finish

Short length provides rigidity, minimizing deflection and improving hole quality. Ideal for for use on tool steel, stainless steel, alloy steel, and cast iron.

Uncoated
List# 759

Production Grade Screw Machine Length Slow Spiral Carbide Drill Bits

Chicago Latrobe—Manufactured from solid submicron grain carbide with exacting tolerances. Stub lengths allow rigid setups, which minimizes deflection. Slow spiral drills provide a curled chip with excellent chip flow and removal. 4-facet point helps eliminate walking and requires less force.

- 118° 4-facet point

OSG—Self-starting point design for improved hole accuracy. Chips are broken at the cutting edge, which helps eliminate chip packing, increases feed rate, and quickens cycle times. 4-facet point.

- 135° point

EXOCARB® AD

EXOCARB® ADO

Production Grade Screw Machine Length Solid Carbide Bits, 140°

- EgiAs™ finish
- For ferrous and nonferrous materials

EgiAs™ coating features high wear and heat resistance characteristics. Suppresses friction with the wear resistance layer and prevents breakage with the nano periodical layer.

EXOCARB® AD—R-thinning point type, or radial point thinning, creates a highly rigid cutting edge for heavy drilling. Wavy point form breaks chip into small, manageable pieces. Creates sharp cutting action for reduced thrust forces. Wide flute room facilitates stable chip evacuation.

EXOCARB® ADO—X-thinning point type for nonradial point thinning. Creates self-centering cutting edge, ideal for deep holes. These drills are coolant fed performance drills, designed to drill in a variety of steels up to 30XD diameter without pecking.

Production Grade Metric Jobbers Length Solid Carbide Drill Bits, 140 °

- X Thinning point
- EgiAs finish

High-performance drills are designed to be used on a variety of steels. Their special point geometry helps reduce thrust forces, while a proprietary coating helps enable higher drilling speeds and promotes longer tool life.

Production Grade Metric Taper Length Solid Carbide Drill Bits, 140 °

- X Thinning point
- EgiAs finish

High-performance drills have a sharp cutting action that reduces thrust forces and produces smaller chips. The proprietary coating and cutting-edge coolant delivery helps reduce heat and improve chip evacuation. Use on a variety of ferrous and non ferrous materials.

WALTER

Production Grade DC170 Carbide Drill Bits, 140°

- TiAlN/AlCrN finish
- Internal cooling

With 360° coolant coverage and polished flutes that help optimize chip removal, these right-handed solid carbide drills provide 50% longer tool life and 35% higher workpiece values in general drilling and mechanical engineering applications when compared to conventional solid carbide drills. Specifically designed for use in ISO material groups P and K.

AlCrN

Jobber Grade A1249XPL High-Speed Drill Bits

▪ **For additional sizes, go to Grainger.com®**

Professional machinists can rely on these drill bits for a wide variety of projects. Primary applications include materials with difficult cutting properties such as heat-resistant special alloys based on iron, nickel and cobalt, titanium and titanium alloys, plastics, glass and carbon fiber reinforced plastics, and graphite. Secondary applications include all types of steel and steel casting with the exception of steel with an austenitic structure, austenitic stainless steel, austenitic-ferritic steel and steel casting, grey cast iron, cast iron with spheroidal graphite, malleable cast iron, cast iron with vermicular graphite, aluminum and other nonferrous metals, and nonferrous materials.

Black & Gold

WESTWARD CLE-LINE.

Maintenance Grade Mechanics Length HSS Drill Bits, 135°

- Split point
- Black and gold finish

Shorter length provides strength and rigidity. 3 flats on drill bit shank for sizes above 11/64" ensure grip for standard and keyless chucks.

Straw

CLE-LINE.

Maintenance Grade Mechanics Length Left-Hand Cobalt Drill Bits, 135°

- Split point
- Straw finish

Left-hand helix for use where machine spindles rotate counterclockwise. Reverse action allows tools to be substituted for screw extractors. 8% cobalt HSS allows drill bit to run cooler and last longer. Shorter length provides superior rigidity for portable drilling.

Black Oxide

WESTWARD · Chicago-Latrobe® · CLE-LINE.

Maintenance-Grade Silver and Deming HSS Drill Bits, 118°

- 1/2" reduced shank
- Round bits are conventional point
- Round with flats are split point

Run drill sizes up to 1 1/2" on portable electric drills or drill presses. Minimal adjustment needed during tool changes. No need for tool presetting. Flatted shanks provide a more positive grip in the drill chuck.

Chicago-Latrobe®

Production Grade Taper Shank HSS Drill Bits, 118°

- Black oxide finish
- Conventional point
- Taper shank is made to American National Standard (Morse) dimensions

Designed for use in taper holders, these drill bits can be used for drilling many different materials in a wide range of applications.

Chicago-Latrobe®

Production Grade Taper Length HSS Drill Bits, 118°

- Conventional point
- Black oxide finish

Provide longer flute and overall length for deeper drilling and hard-to-reach applications.

CLEVELAND

12" Length

Production Grade Extra-Length HSS Aircraft Drill Bits, 135°

- Split point
- Straight shank
- Bright finish

Use to drill holes in deep or inaccessible places that cannot be reached with regular length drills. Jobbers length flute makes drills more rigid. Designed for the aerospace industry and meet National Aerospace Standards (NAS) 907, Type B.

CLE-LINE.

Maintenance Grade Double-End HSS Drill Bits, 135°

- Split point
- Black oxide finish

Two drills in one. Split point is self-centering for quick penetration. For drilling thin metals.

Threaded Shank Drill Bits

- 135° split point
- Black oxide finish
- Additional material and sizes are available on Grainger.com®

Split point penetrates on contact and helps prevent walking. High-speed steel bits are constructed for superior strength and run-out characteristics. Cobalt steel bits have a hard surface with high lubricity.

Drill Bit Blanks

MONSTER

- Ground finish
- Carbide material
- Dia. tolerance: +0.0000/-0.0005"
- Additional material and sizes are available on Grainger.com®

These solid carbide drill bit blanks come in standard sizes expressed in fractional inches, which are the most common trade size used for drill bits. They are harder than cobalt steel and high-speed steel drill bit blanks. They provide good wear resistance when drilling into the toughest materials. Machined to create custom drill bits with precise dimensions to suit specific applications. Typically used to check size of a drilled hole or to create gauges, drifts, punches, rollers, locating pins, spindles, or knockout pins.

MONSTER

Series 777 Tool Blanks

- Unfinished
- Carbide material
- Parallelism and flatness tolerances: ±0.020"
- Minimum grind stock: Thickness: +0.008"; Width: +0.012"; Length: +0.008"
- Additional material and sizes are available on Grainger.com®

Commonly used as wear parts, tools, grinder rests, and appliance parts, these solid C-2 grade medium-grain carbide strips contain 6% to 8% cobalt.

Drill Bit Sharpeners

Drill Doctor
The Drill Bit Sharpener

GENERAL

Sharpeners—Easy chuck alignment system for quick, precise sharpening. 110V, 1.75 amp motor produces 20,000 rpm. Long-lasting diamond wheel sharpens standard twist, HSS, TiN, cobalt, carbide, and masonry drills in under 60 sec. Nos. 6YB32 and 6YB33 can be used with split point bits. No. 6YB32 includes carrying case.

Sharpening Attachment—Locks into 5 standard angles (88°, 68°, 59°, 49°, and 41°) to quickly resharpen drill bits. Use with ANSI, OSHA, UL Listed standard electric bench or surface grinders.

Drill Sharpener V-390
No. 6MVH6

Drill Sharpener XT-3000
No. 6MVH7

Drill Bit Sharpeners

DAREX

For standard conic and split point styles. Drill Sharpener V-390 No. 6MVH6 is for light-duty, intermittent jobs. Drill Sharpener XT-3000 No. 6MVH7 is an advanced manual sharpener for use on a variety of drill sizes and styles. Drill Sharpener with Auto Sharpener XT-3000 No. 6MVK0 performs the same functions as No. 6MVH7, but automates the drill sharpening process for higher volume requirements.

Center Drills

Center drills consist of a pilot drill and a countersink and are used to create holes at the center of a piece of stock so it can be turned between centers on a lathe in metalworking tasks. Drills with a **plain tip** are the standard choice for creating center holes. Drills with a **radius tip** have a tapered flute that allows them to create more accurate holes than other styles of center drills. Drills with a **bell tip** have a 120° chamfer on their tip that bevels the outer edge of the center hole to strengthen it and protect it from damage in applications where the piece of stock will go through multiple machining passes. **Jig-bore** drills have a flat on the shank for securing them to a jig borer machine with a set screw.

High-Speed Steel—Provides good wear resistance in a wide range of machining applications.

Cobalt Steel—Provides good wear resistance when machining hard materials at high speeds and is harder than high-speed steel.

Powdered Metal—Stronger than high-speed steel and cobalt steel.

Solid Carbide—Provides excellent wear resistance when machining the toughest materials, such as stainless steel.

WESTWARD

High-Speed Steel Countersinks

- 82° countersink angle
- Bright finish

Countersinks expand the top of an existing hole in a workpiece to allow countersinking screws to install flush with the surface of the workpiece. This helps prevent the workpiece material from swelling when a screw is inserted in the hole and tightened down.

Fast-Cut 1-Flute—Leaves clean edges on holes and has a high, positive rake that reduces vibration.

3-Flute—Typically provides better chip clearance and performs better when machining stringy materials than countersinks with more flutes.

6-Flute—Provides fast material removal and leaves a smooth finish. Removes more material with each revolution and typically provides more wear resistance than countersinks with fewer flutes.

Countersink Material Information

High-Speed Steel—Provides good wear resistance in a wide range of countersinking applications.

Cobalt Steel—Provides good wear resistance when machining hard materials at high speeds and is harder than high-speed steel.

Bright (Uncoated)—Unaffected when the countersink's cutting edges are resharpened.

TiN—Protects against wear, increases chip flow in softer materials, and allows for higher speeds than bright (uncoated) finish.

TiAlN—Protects against wear in dry, high-speed machining tasks and can withstand high temperatures.

Anti-vibration Cobalt Steel Zero-Flute Countersinks

Zero-flute countersinks minimize vibration and chatter during use and prevent chips from sticking to the tool. They leave smooth, clean edges as they expand the top of a hole in countersinking tasks. Commonly used for installing aluminum frame storefronts, glass and window design, and architectural metalworking applications.

General Purpose 3-Flute Countersinks

Three-flute countersinks typically provide better chip clearance and perform better when machining stringy materials than countersinks with more flutes. These countersinks are compatible with a range of materials and are the most common choice for expanding the top of a hole in countersinking tasks.

Carbide Countersinks

Carbide countersinks provide excellent wear resistance when machining the toughest materials, such as stainless steel.

Fast-Cut 1-Flute—Leaves clean edges on holes and has a high, positive rake that reduces vibration.

3-Flute—Typically provides better chip clearance and performs better when machining stringy materials than countersinks with more flutes.

6-Flute—Provides fast material removal and leaves a smooth finish. Removes more material with each revolution and typically provides more wear resistance than countersinks with fewer flutes.

KEO

Cobalt Steel Counterbores with Built-In Pilots

Counterbores make a flat-bottomed cavity at the top of a hole so that a bolt, nut, or other part is hidden beneath or sits flush with the top of the hole when installed into it. Also called solid pilot counterbores, these counterbores have a built-in pilot that keeps them centered in the hole to ensure a level seat. The pilot cannot be removed. Cobalt steel counterbores provide good wear resistance when machining hard materials at high speeds. For additional sizes, see Grainger.com®.

Broaches

- High-speed steel

Broaches machine keyways and other shapes into a hole. **Davis-style keyway** broaches create precise keyways in the bore holes of pulleys, gears, washers, and other shaft-mounted parts to lock them to keyed shafts. **Hex** and **square** broaches punch hexagonal or square holes in fixtures, jigs, and sockets. Hex broaches turn a round pilot hole into a hexagonal hole in a single pass. Square broaches turn a round pilot hole into a square hole in a single pass.

Adjustable Hand Reamers

- High-speed steel
- Black-oxide finish
- Sets supplied in wooden box

Adjustable hand reamers have nuts and straight blades that can be adjusted to allow the tool to enlarge or finish holes of different sizes. The blades can be sharpened and replaced. The reamers push chips forward into the hole and are suitable for reaming through holes. They are held with a tap wrench, adjustable wrench, or vise and slowly rotated to feed them into a hole.

High-Speed Steel Straight Shank Expansion Reamers

These reamers have an adjustment screw that expands the size of their cutting head so it can be reground to its original size. This lets users compensate for wear on the reamers' cutting edge to extend the tools' life. The reamers enlarge or finish a hole to a precise tolerance or size.

Chucking Reamers

- Straight shank
- Non-coolant-through design

Chucking reamers mount to a compatible machine such as a drill press, lathe, or screw machine. They enlarge or finish a hole to an exact tolerance or size for a precise fit when installing fasteners or other parts, and they typically have a 45° chamfer on the cutting edge to maximize accuracy as they enter the hole. **Carbide** reamers are suitable for machining the toughest materials. **Carbide-tipped** reamers offer the strength and wear resistance of carbide on just the cutting edge. **Cobalt** reamers are suitable for machining hard materials at high speeds. **High-speed steel** reamers are suitable for general purpose applications. **Right-hand spiral-flute** reamers pull chips out of the hole. **Straight-flute** reamers push chips into the hole.

Taper Pin Reamers

- High-speed steel
- Bright (uncoated) finish

Taper pin reamers enlarge, finish, or shape holes for a precise fit when installing taper pins into the hole. They have a ¼" taper to the foot and are made from high-speed steel, which offers good wear resistance in general purpose metalworking applications.

Helical—Reduce the size of the chips created during reaming and prevent chips from packing in the flutes. Operated with a machine such as a drill press, lathe, or screw machine.

Straight—Push chips forward into the hole and are the most commonly used style of reamer. Operated with a tap wrench, adjustable wrench, or vise.

Spiral—Pull chips out of the hole during reaming, which helps prevent damage to the reamers and workpiece. Suitable for reaming applications with blind holes and interrupted cuts. Operated with a machine such as a drill press, lathe, or screw machine.

Hex Nut with Safety Magnet, Black Oxide
No. 12G352

Morse Taper, Black Oxide
No. 13H785

Straight with Safety Collar, Bright (Uncoated)
No. 13H830

Straight with Three Flats, Black Oxide
No. 13H816

GA GRAINGER APPROVED

High-Speed Steel Bridge Reamers

Bridge reamers install into compatible power tools to enlarge, debur, and finish holes in structural materials to a specific size. They have tapered flutes that ease their entry into rough-cut or misaligned holes. Designed for reaming difficult-to-machine materials such as iron and structural steel in applications where extreme precision is not required. Also commonly used to ream rivet holes in parts for automobile, bridges, rail cars, ships, and pressure vessels.

HEX NUT SHANK

Hex nut keeps the reamer securely in place in tools that have a square drive. Typically used to ensure the reamer won't come loose when it's used in a power tool that is being operated at a high location. **Hex nut shank with safety magnet** also have a magnet on the shank and provide a stronger hold than reamers that are secured with only a hex nut.

MORSE TAPER SHANK

Can be directly inserted into the spindle of a compatible tool or into an adapter such as a Morse taper sleeve or socket. This maximizes efficiency when installing and removing the reamers. These reamers provide accurate centering, and their self-locking taper shank is held in place by the friction between the shank and the toolholder.

STRAIGHT SHANK

Straight shank reamers with safety collars prevent the reamer from going too deep into the workpiece. **Straight shank reamers with three flats** are used in pneumatic or electric power tools.

Spiral Flute
No. 1U296

Straight Flute
No. 2LKP1

Drill/Screw Extractor Set
No. 4DZL8

Screw and Drill Extractor Sets

High-carbon steel construction, heat-treated and tempered for long life.

Multi-Spline—Use to remove broken studs, bolts, socket screws, and fittings for high torque applications. Left-hand spiral design provides extra gripping power.

Spiral Flute—Tapered left-hand spiral flutes grip screws firmly.

Straight Flute—Provide maximum bite without binding or chewing.

Drill/Screw Extractor Sets—Include both screw extractors and drill bits.

Screw Extractor and Hard Steel Drill Bits

For removing broken screws, bolts, and threaded parts. Extractor is inserted into predrilled hole and broken screw is backed out with a wrench.

Tap Information and Tap/Drill Size Reference Charts

TAP TYPES

Chip-Free Thread-Forming Taps
Press against the sides of a hole to form threads, and don't create chips. Produce cleaner, stronger, and more accurate threads than taps that cut threads.

Pipe and Conduit Thread Taps
Used for internal threading of pipes, pipe fittings, and holes.

Spiral-Flute Taps
Spiral flutes pull chips out and away from the hole to prevent chips from packing in the hole.

Spiral-Point Taps
An angular point pushes chips in front of the tap, which helps keep the tap's flutes from clogging.

Straight-Flute Taps
Chips move into the taps' straight flutes but are not evacuated during threading.

MATERIALS

Carbide
Provides maximum hardness and excellent resistance to heat and wear. Suitable for tapping hard materials at high speeds and requires a rigid setup such as a CNC machine.

Carbon Steel
Suitable for thread repair tasks that do not require high accuracy.

Cobalt
Harder and more wear-resistant than high-speed steel. Suitable for high-speed tapping in hard materials.

High-Speed Steel
Offers more resistance to abrasion and heat than carbon steel and provides good wear resistance in a range of materials.

Powdered Metal
Tougher and less likely to break than cobalt and high-speed steel. Finishes and Coatings

Black Oxide
Retains lubricants to improve wear resistance and chip flow.

Bright (uncoated)
Provides a smooth, polished surface.

CrC/C
Multilayer coating with an inner layer of TiN and an outer layer of CrC/C. Protects against wear when tapping ferrous and nonferrous metals.

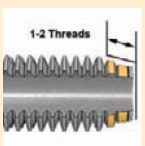
Diamond
Offers excellent hardness and protects against wear when threading abrasive materials.

Hardlube
Features an inner layer of TiAlN that withstands high temperatures and protects against wear and an outer layer of WC/C that helps prevent chips from sticking to the tool.

TiCN
Harder and more wear-resistant than TiN coating.

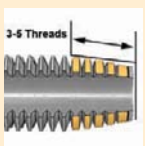
TiN
Resists wear and allows for faster speeds than bright finish.

CHAMFERS



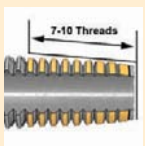
Bottoming
1 to 2 chamfered threads in front of the tap. Used for threading near the bottom of blind holes.

Modified Bottoming
2.5 to 3 chamfered threads in front of the tap. Used primarily in blind holes.



Semi-Bottoming
2 to 2.5 chamfered threads in front of the tap. Used primarily in blind holes.

Plug
3 to 5 chamfered threads at the front of the tap. Used in through holes and blind holes with adequate space for chips to accumulate in front of the tap.



Taper
7 to 10 chamfered threads at the front of the tap. Used in through holes.

Bottoming Thread Chamfer

Plug Chamfer Thread

Taper Chamfer Type

PITCH DIAMETER LIMITS
A letter followed by a number which shows the tolerance of pitch diameter over the basic pitch diameter.

PITCH DIAMETER LIMITS

Die Sets

- Right-hand thread direction

GREENFIELD THREADING CLE-LINE. WESTWARD CLEVELAND

Die sets contain multiple carbon steel hex dies for restoring damaged or rusted external threads on metal and plastic parts in general purpose threading tasks. The dies are turned with a die wrench or a standard wrench, and each die can repair one size of thread.

High-Speed Steel Drill, Carbon Steel Tap & Carbon Steel Die Set
No. 2ETL5

Drill Bit, Tap and Die Sets

IRWIN HANSON GREENFIELD THREADING

Drill bit, tap, and die sets include multiple drill bits, taps, and dies. The drill bits make holes, the taps create or repair internal threads in holes, and the dies create or repair external threads on parts that will be screwed into tapped holes.

Three-Piece Tap Kits

Each kit contains three straight-flute taps with the same thread size, thread length, and overall length but different chamfer types. One tap has a taper chamfer, one tap has a bottoming chamfer, and one tap has a plug chamfer.

IRWIN HANSON. BOSCH
GEARWRENCH® WESTWARD
CLE-LINE. CLEVELAND GREENFIELD THREADING

High-Speed Steel Taps & High-Speed Steel Dies No. 1PZ44

Tap & Die Sets

Sets contain multiple taps and dies for threading tasks. Taps create internal threads in holes, and dies create or repair external threads on parts that will be installed in the holes.

Combination Drill, Tap & Countersink Set No. 6EXL3

GREENLEE. WESTWARD GREENFIELD THREADING DEWALT

Combination Drill, Tap and Countersink Sets

- Right-hand thread direction
- High-speed steel material

These sets contain multiple combination drill-tap-and-countersink tools in a range of sizes. Combination drills, taps, and countersinks make a hole, create threads in the hole, and countersink the top of the hole in one pass.

No. of Pieces	Thread Sizes Included	Finish - Machining	Brand	Item No.

GREENLEE. DEWALT WESTWARD

Combination Drills, Taps and Countersinks

- Right-hand thread direction
- High-speed steel material
- Bright (uncoated) finish

These combination tools drill a hole and create threads in the hole in one pass. They also create a countersink at the top of the hole that allows a screw to sit flush with the top of the hole when it is screwed into the hole.

Additional tap sizes, materials, and coatings are available on Grainger.com®.

General Purpose Chip-Free Thread-Forming Taps

Black Oxide
Metric Coarse, Semi-Bottoming, Modified Bottoming
No. 427X71

- Right-hand thread direction

General purpose chip-free taps are made from high-speed steel and can create threads in a wide range of materials.

High-Performance Chip-Free Thread-Forming Taps

Multiple Material Tapping, UNF, TiCN, DIN/ANSI
UNF, Plug
No. 54MC84

- Right-hand flute direction

High-performance chip-free taps are harder and more wear-resistant than general purpose chip-free taps. They provide better precision and accuracy than general purpose taps when used in designated materials.

REGAL CUTTING TOOLS

Acme Taps

- High-speed steel material
- Bright (uncoated) finish
- 4 flutes
- 2G thread limit/class of fit

These taps create trapezoidal Acme threads, which have a 29° thread angle and are stronger than similarly sized square threads. Sometimes called tandem taps, Acme taps are used for threading through holes on parts that allow rotation or transversing (straight-line) movement on equipment that will bear heavy loads, such as jacks, valves, and presses. They are installed in tap holders in rigid setups such as drill presses and milling machines.

Pulley Taps

- Right-hand thread direction
- High-speed steel material
- 4 flutes
- H3 thread limit

Pulley taps make internal threads in set-screw holes on pulley assemblies, and they each have a long shank that acts as an alignment guide as the tap reaches through a pulley hub to access the holes. The taps can access hard-to-reach holes that a standard tap could not reach, and their shank diameter is roughly equal to their thread diameter.

Extension Taps

- Right-hand thread direction

Extension taps have long shanks that let them tap deep or hard-to-reach holes. They create internal threads in holes, and their reduced-diameter shank clears the hole when tapping a hole at a depth that is greater than the taps' thread length.

Pipe and Conduit Thread Taps

- Right-hand thread direction

Pipe and conduit thread taps create or repair internal threads in pipe, conduit, and fittings so they can mate with parts that have matching external threads.

Additional tap sizes, materials, and coatings are available on Grainger.com®.

Interrupted-Thread Pipe and Conduit Thread Taps

WIDIA GTD · GREENFIELD THREADING · CLEVELAND · CLE-LINE.

NPT, 3 Flute
No. 33ZL63

- Right-hand thread direction

These taps have an interrupted thread pattern in which every other tooth has been removed from the cutting edge. They offer more space for chip evacuation than taps with a standard thread pattern, which allows large chips to be cleared from the taps during threading tasks.

Short-Projection Pipe and Conduit Thread Taps

- Right-hand flute direction
- High-speed steel material

These taps have fewer tapered threads at their tip than standard pipe and conduit taps. They don't have to enter deep into the workpiece to produce full threads and are suitable for tapping shallow holes.

Screw Thread Insert (STI) Taps

Bright (Uncoated) High Speed Steel Spiral Flute, UNC, 2 Flutes
No. 33ZJ83

STI taps create an oversized thread inside a hole so that a helical-coil screw thread insert can be installed in the hole. The insert distributes the load across the length of the threads and improves the threads' strength when a fastener with a standard screw thread size is screwed into the hole.

General Purpose Spiral-Flute Taps

UNC, 2 Flutes
No. 2VZY9

- Right-hand thread direction

General purpose spiral-flute taps create internal threads in blind holes and are intended for threading a wide range of materials.

Additional tap sizes, materials, and coatings are available on Grainger.com®.

CLEVELAND WIDIA GTD

High-Performance Spiral-Flute Taps

- Right-hand thread direction

High-performance spiral-flute taps create internal threads in blind holes and are harder and more wear-resistant than general purpose spiral-flute taps. They provide better precision and accuracy than general purpose taps when used for threading holes in designated materials.

General Purpose Spiral-Point Taps

- Right-hand thread direction

General purpose spiral-point taps create internal threads in through holes and are intended for threading a wide range of materials. These taps are made from high-speed steel.

Thread Size	Thread Length	Overall Length	Thread Limit / Class of Fit	Brand	Item No.

Additional tap sizes, materials, and coatings are available on Grainger.com®.

WIDIA GTD · WALTER PROTOTYP

High-Performance Spiral-Point Taps

- Right-hand thread direction
- Plug chamfer

High-performance spiral-point taps create internal threads in through holes and are harder and more wear-resistant than general purpose spiral-point taps. They provide better precision and accuracy than general purpose spiral-point taps when used for threading holes in designated materials.

Carbide Straight-Flute Machine Taps

- Right-hand thread direction

Straight flute machine taps are installed in a toolholder on a machine and are used to create or repair internal threads in blind holes and through holes. These carbide taps provide excellent hardness and heat resistance and can be used for tapping hard materials at high speeds.

Tap Wrenches

Tap wrenches are used to manually turn taps when repairing or creating threads in holes.

Fixed T-handle wrenches are more compact than straight-handle wrenches.

Ratcheting wrenches can be turned and repositioned quickly when working in tight spaces.

Sliding T-handle wrenches have a T-handle that slides from side to side, allowing them to be turned in tight spaces. They are more compact than straight-handle wrenches.

Straight-handle wrenches have a long, straight handle that provides more leverage than a T-handle.

Die Wrench for Round Dies
No. 20X630

Die Wrenches

Die wrenches hold compatible dies so they can be turned in manual threading tasks. Also known as die stocks, the wrenches have straight handles on both sides that provide leverage when turning the dies.

Thread-Making Round Dies

- Right-hand thread direction

Round dies cut new threads or restore existing threads on the outer surfaces of parts so they can be mated with holes or other parts that have matching internal threads. A set screw adjusts the thread depth to over- or under-cut threads for a precise fit.

Carbon Steel Hex Die UNF
No. 20X666

CLEVELAND
WESTWARD
IRWIN HANSON

Thread-Repair Hex Dies

- Right-hand thread direction

Hex dies repair damaged, worn, or rusted threads on the outer surfaces of parts so they can be mated with holes or other parts that have matching internal threads. They can be turned with a standard wrench or a compatible die wrench. **Self-aligning** dies have a plate that aligns the die when it's placed on a part to help prevent cross threading.

End Mill Flute, Material, and Finish Information

End mills have cutting edges on their nose and/or sides that remove material from a workpiece. They are used on computer numerical control (CNC) or manual milling machines to create parts with complex shapes and features such as slots, pockets, and grooves. Flutes on the end mills' cutting head carry the removed material away from the workpiece to prevent damage to the end mills or workpiece.

Materials

Carbide end mills provide excellent wear resistance and heat resistance and are harder than powdered-metal and cobalt end mills. They require a rigid setup.

Cobalt end mills can tolerate more vibration than carbide end mills.

Powdered-metal end mills are tougher and less likely to break than cobalt end mills.

Finishes

AlTiN is more resistant to high heat than TiN, TiCN, and TiAlN.

AlTiCrN offers higher resistance to oxidation than an AlTiN coating.

Bright (uncoated) provides a smooth, polished surface.

Diamond is only used for milling nonferrous materials such as aluminum, graphite, copper, and carbon fiber.

DLC is a cost-effective alternative to diamond finish and is used for milling abrasive materials such as stainless steel, ceramics, plastics, and aluminum alloys.

EXO is a multilayered TiAlN coating with a very smooth finish. It resists wear better than a standard TiAlN coating and withstands high speeds and high temperatures.

GMS has a lower coefficient of friction than GMX-35, which helps prevent built-up edge. It is also harder and more resistant to high heat than TiAlN and ZrN.

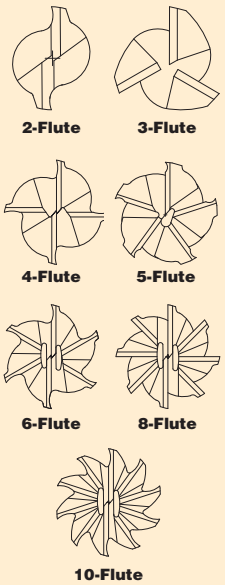
GMX-35 is harder and resists high heat better than TiAlN and ZrN, and it is suitable for high-speed milling and dry machining applications.

nACRo is harder and more resistant to high heat than TiAlN, TiCN, AlTiN, and AlCrN.

TiAlN withstands high temperatures, allows for faster speeds than a bright finish, and resists cracks and oxidation better than TiN or TiCN.

TiCN is harder and more wear-resistant than TiN.

TiN resists impact better than TiAlN and AlTiN.



SS provides a polished surface that's smoother than a bright finish.

Taz reduces the need for coolant and is recommended for dry machining applications.

WXL is used for milling nonferrous metals and steels with a Rockwell hardness of up to 50 HRC.

WXS is used for milling nickel-based alloys and hardened steels with a Rockwell hardness of more than 50 HRC.

ZrN has a higher oxidation temperature than TiN and is used for milling nonferrous metals.

Helical-Flute Thread Mills

MICRO 100 super carbide tools · SCT · OSG · Carmex Precision Tools, Ltd. · WIDIA GTD

- Carbide material

Helical-flute thread mills have spiral flutes and provide a smoother cut than straight-flute or single-profile thread mills. They are used to create threads on tough or thin-walled materials and can create internal threads of the same pitch in a range of hole diameters, eliminating the need to change tools when threading multiple holes of different sizes. For use in CNC machines that have helical interpolation capability.

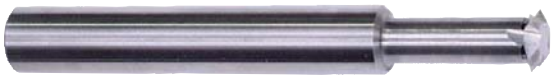
Single-Profile Thread Mills



MICRO 100 super carbide tools | SCT

For more information on end mills, see page 2277.

- Carbide material

Single-profile thread mills create very low side-cutting pressure and provide more control over pitch diameter and cut length during thread-milling tasks than helical-flute or straight-flute thread mills. They are suitable for threading applications with unfavorable length-to-diameter ratios and can create internal threads with a variety of pitch ranges, lengths, and diameters, eliminating the need to change tools when threading multiple holes of different sizes. For use in CNC machines that have helical interpolation capability.

Straight-Flute Thread Mills

SCT

- Carbide material

Straight-flute thread mills are suitable for general purpose thread-milling applications and create internal threads of the same pitch in a range of hole diameters, eliminating the need to change tools when threading multiple holes of different sizes. They provide good strength but require a rigid machine setup. For use in CNC machines that have helical interpolation capability.

MONSTER

Carbide End Mill Sets

- ⅛", 3⁄16", ¼", ⅜", ½" sizes included
- Center cutting

Sets contain five end mills in a range of sizes and are ideal for job sites that frequently use various sizes of end mills in machining tasks.

Square End Mills

List# I2S
No. 48GY99

Square end mills have a square nose and create a flat-bottomed groove with 90° inside corners in milling tasks. Also called square-nose end mills, they are used for counterboring, side and face milling, and milling square shoulders.

General purpose end mills are intended for milling a wide variety of common materials.

High-performance end mills are used in production milling.

Roughing end mills remove large amounts of material from a workpiece more quickly than roughing/finishing and finishing end mills.

Roughing/finishing end mills remove large amounts of material and create a smooth finish on the workpiece at the same time.

Finishing end mills create a finer finish on the workpiece than roughing and roughing/finishing end mills.

Ball End Mills

Ball end mills have a rounded nose and create a round-bottomed groove in milling tasks. Also known as ball-nose end mills, they are used to make round-bottomed slots and pockets or mill complex shapes without sharp corners.

General purpose end mills are intended for milling a wide variety of common materials.

High-performance end mills are used in production milling.

Roughing end mills remove large amounts of material from a workpiece more quickly than roughing/finishing and finishing end mills.

Roughing/finishing end mills remove large amounts of material and create a smooth finish on the workpiece at the same time.

Finishing end mills create a finer finish on the workpiece than roughing and roughing/finishing end mills.

Tool Reconditioning Solutions

Help extend the life of your tools. Just send in your worn drills, end mills, and other cutting tools, and we'll send them back to you cleaned, sharpened and ready to perform like new. Capabilities include:

- Reconditioning of most types of high-speed, cobalt and carbide rotary cutting tools
- CNC regrinding of end mills and high-performance tools

Brought to You by US Tool and Grainger.

Contact your **Grainger Representative** for more information, today!

Corner-Radius End Mills

Corner-radius end mills have a square nose with slightly rounded corners that help distribute cutting forces evenly to prevent damage to the end mill and extend its life. Sometimes called bull-nose end mills, they create a flat-bottomed groove with slightly rounded inside corners in milling applications that require a specific radius.

High-performance end mills are used in production milling.

Roughing/finishing end mills remove large amounts of material and create a smooth finish on the workpiece at the same time.

Finishing end mills create a finer finish on the workpiece than roughing and roughing/finishing end mills.

High-Performance Roughing/Finishing Carbide Corner-Chamfer End Mills

High-performance roughing/finishing carbide corner-chamfer end mills are used in production milling. They each have a square nose with slightly angled corners that help distribute cutting forces evenly to prevent damage to the end mill and extend its life. They create a flat-bottomed groove with slightly chamfered inside corners in milling applications that do not require a specific radius size. Roughing/finishing end mills remove large amounts of material and create a smooth finish on the workpiece at the same time.

General Purpose Finishing Carbide Corner-Chamfer End Mills

General purpose finishing carbide corner-chamfer end mills are intended for milling a wide variety of common materials. They each have a square nose with slightly angled corners that help distribute cutting forces evenly to prevent damage to the end mill and extend its life. They create a flat-bottomed groove with slightly chamfered inside corners in milling applications that do not require a specific radius size. Finishing end mills create a finer finish on the workpiece than roughing and roughing/finishing end mills.

Double-End Straight-Shank Corner-Rounding End Mills

Double-end corner-rounding end mills have a straight shank with concave cutting edges on both ends. They create rounded outside edges on a workpiece in milling tasks and can accomplish more milling tasks than single-end end mills before they need to be replaced.

Carbide Drill Mills

MONSTER | MICRO 100 | WIDIA HANITA

Drill mills have a nose with a pointed tip and can drill holes or create angled features in a piece of stock. They are used for slotting, side profiling, chamfering, spotting, countersinking, and cutting grooves in milling tasks.

Keyway End Mills

YG | CLEVELAND

Keyway end mills make slots in parts so that key stock can be inserted into the slots when mating other components with the parts. These end mills are typically undersized, which means they create an undersized slot to ensure a snug, secure fit when key stock is inserted into the slot.

Double-End Straight-Shank Chamfer Mills

Double-end chamfer mills have a straight shank with angled cutting edges on both ends and can accomplish more milling tasks than single-end chamfer mills before they need to be replaced. They are used to create chamfered or beveled edges, to debur edges, and to spot and countersink holes in one step prior to drilling.

Router Bit Sets

Router bit sets contain multiple bits for creating decorative edges and other features in workpieces. These bits are used in woodworking and light manufacturing applications in a variety of materials, including wood, some metals, plastics, and composites.

Solid Router Bits

Solid router bits make plunge and profile cuts in solid surfaces. The geometry of the router bit helps determine the material it's best suited for use with. These router bits are used in CNC routers, machining centers, and milling machines for manufacturing and production applications.

Details on page A1.

GA GRAINGER APPROVED MONSTER WIDIA

Carbide Burs

- For long shank burs, see Grainger.com®
- For information on overall length, see Grainger.com®

Single Cut—For general purpose use on steel, cast iron, ferrous, and nonferrous metals.

Double Cut—For use on steel, stainless steel, high-temperature alloys, and cast iron.

Diamond Cut—For fiberglass routing.

Cylinder - No End Cut (SA)

Cylinder - End Cut (SB)

Cylinder - Radius End (SC)

Ball (SD)

MONSTER

Aluma Cut Carbide Burs

These single-end burrs are designed with a high flute finish for easy chip flow in soft materials such as aluminum, plastics, and zinc. Made of micrograin C-2 grade premium carbide with 8% to 10% cobalt content. For use in die grinders, CNC machining centers, and high-speed dremel-type rotary tools.

Note: Additional trade sizes available, go to Grainger.com®.

Premium NG

HAIMER

Power Clamp Shrink Fit Machines

- Compatible with carbide and HSS tools
- 5-second shrink time
- Induction shrink fitting style
- Integrated contact cooling (except No. 52TV71)

Mini—This single chuck version features standard coil V2008 and interchangeable stop discs. Includes base holder, chuck support, and 3 stop discs.

Special Edition—This single chuck version features standard coil V2008 and interchangeable stop discs. This unit includes cooling manager, base holder, and chuck support.

Comfort NG—Includes intelligent NG coil, rotary table with 3 stations plus chuck support, and cooling manager.

Premium NG—Features intelligent NG coil and integrated drawer. Integrated contacted cooling has 5 cooling bodies fixed to linear guides. Includes cooling manager, 2 precision base holders, and 2 precision chuck supports.

No. 46LX87

HAIMER

Standard Shrink Fit Chucks

- Balanced to 25,000 rpm

Made of heat-resistant, hot-working steel with a fine-machined surface. Suitable for all kinds of high-speed steel and solid carbide shrink-fit units. Features include high runout accuracy, extreme clamping torque by high pressing in the clamping bore, short camfer, reinforced shank, slimness (marginal interference contour), and rigidity. CAT40 Form ADB means central-coolant supply and coolant channels through the flange can be sealed again. Threaded bores allow for simple and fast balancing with screws.

TECHNIKS BUILT FOR SPEED

CV40 Toolholders

These toolholders securely grip and center rotary cutting tools to enable them to make accurate cuts.

End mill holders attach end mills to a milling machine. They grip more securely than a collet to keep end mills from spinning or pulling out during heavy cuts.

Shell mill holders secure shell mills and face mills to a milling machine.

Shrink-fit toolholders use thermal contraction rather than mechanical tightening to get a strong, uniform grip on cutting tools. They provide more gripping force, better balance, and higher concentricity in high-speed machining applications than collets, milling chucks, or hydraulic chucks.

Collet Chuck

- Coolant-Through

Collet chucks connect collets to milling machines, lathes, and other manual and CNC machine tools so that the collets can hold small-diameter tools and workpieces securely on the machine.

LYNDEX NIKKEN

Shell Mill Holders

These holders are quick and easy to set up and accommodate face mills with bore diameters ranging from ½" to 2". Pilot diameter sized for precision fit with cutter. Include removable/replaceable drive keys and arbor screw.

ER Milling and Drilling Collets

042/ER-16 Series

045/ER-16 Series

- Heat-treated for improved flexibility and durability
- Made from high-carbon bearing steel

042 Series—Precision collets feature a collapse range of 0.039" and an average T.I.R. of 0.0002". Can be used with RD, DR, ESX, and BR collet chucks.

045 Series—Steel-sealed precision coolant collets are sealed to 2000 psi with no plugs to fail. They protect the toolholder from contaminants. Can be used with ER, RD, DR, ESX, and BR collet chucks.

LLAMBRICH USA Jacobs CHUCK

Ball and Plain Bearing Drill Chucks

Chuck jaws are center ground for absolute straightness and alignment. Through-hardened sleeve teeth and hardened chuck nose provide superior wear resistance.

Ball Bearing—Engineered for heavy-duty, close tolerance production drilling. Designed to work with a wide range of production drilling equipment, jig borers, milling machines, lathes, and radials. Ball thrust bearings reduce friction and increase grip torque and overall performance.

Plain Bearing—Llambrich USA chucks feature 1-pc. gearing and sleeve to reduce the possibility of broken teeth. Ideal for stationary drilling, turning, milling, and wood working machines. Designed for medium-duty industrial use. Use threaded mounts for hand-held drilling, and tapered mounts for stationary driling machines. Jacobs® chucks were designed for heavy- and medium-duty applications using portable, bench, or floor-mounted power tools.

Stainless Steel—Designed for applications requiring chemical corrosion resistance and/or where there is a potential for hazardous sparking. 1-pc. sleeve design eliminates cracks between drilling teeth. For use with portable or stationary machine tools.

LLAMBRICH USA Jacobs CHUCK

Keyless Chucks

Designed for high accuracy applications on conventional or CNC equipment.

Medium-Duty—Self-tightening feature automatically increases gripping force proportional to increased torque, preventing tool shank slippage in clockwise rotation. Automatic fitting eases quick tool changes.

High Torque—In addition to the features listed for Medium-Duty Chucks, these models have milled wrench flats and spanner, allowing for supplementary gripping torque. Light tightening increases gripping torque up to 3 times over hand tightening. Right-hand rotation and instant spindle stop make chucks resistant to tool loosening on high-speed machines.

High Torque With Shank—Integrated design keeps arbor and drill chuck together. Compact design minimizes accumulated run-out. Precision tested and certified to 0.0016" (0.04 mm) T.I.R. maximum at maximum capacity. For right-hand rotation applications only.

High Precision—Self-tightening feature automatically increases gripping force proportional to increased torque, preventing tool shank slippage. Automatic fitting eases fast tool changes. Precision tested and certified to 0.0016" (0.04 mm) T.I.R. maximum at maximum capacity.

Jacobs CHUCK

Arbors

Arbors adapt Morse taper to Jacobs® taper; Morse taper to threaded shank; and Bridgeport taper. Precision CNC-machined and ground for high-accuracy performance and close-tolerance fit. Wedge sets are used to remove taper mount chucks from arbors. Also remove Jacobs® tapers Nos. 4 and 5; stack Nos. 3 and 6 wedge sets together.

TAPMATIC

Tapping Heads, Torque Bars, and Arbors

NSM Series—Tension/compression tap holders are for NC machining and turning centers.

Rx Series—For increased production in manual tapping applications.

Torque Bars—Mount securely to prevent tapping attachment's stop arm from rotating. Table-mounted bars mount to T-slots of table. Quill-mounted bars clamp around the quill of the machine.

Serrated End

Tapped End

Nuzzler Edge

Clamp Support

TE-CO

Clamps

- Black oxide finish

PLAIN
Tapered nose allows clamping in tight spaces.

SERRATED END
Serrated teeth engage into teeth of step blocks for clamping in machining operations.

TAPPED END
For single-point clamping. Tapped hole in end for supporting stud.

NUZZLER EDGE
Adjustable, double-action nose exerts clamping pressure downward and inward, and has serrations for better gripping of non- or semi-finished workpieces. Low grip style provides greater machining clearance.

CLAMP SUPPORT
Includes washer, spring, and shaft collar. Helps prevent clamp from falling when attached to clamp stud.

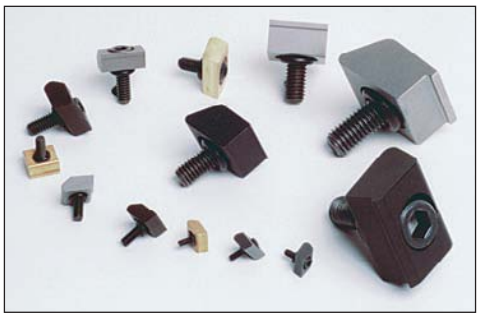
Clamping Kits

- For replacement parts, see Grainger.com®



51-PC. SETS
Include 6 step blocks, 6 serrated end clamps, 4 coupling nuts, 4 flange nuts, 4 T-slot nuts, 1 T-slot cleaner, 24 studs, wooden base, and metal tray.

54-PC. SETS
Include 6 step blocks, 6 serrated end clamps, 4 coupling nuts, 6 flange nuts, 6 T-slot nuts, 1 T-slot cleaner, 24 studs, and machine-mounted holder. No. 2YGP8 comes in plastic case and does not include cleaner.

66-PC. SET
Includes 6 step blocks, 6 serrated end clamps, 4 coupling nuts, 6 flange nuts, four 9⁄16" T-slot nuts, four 5⁄8" T-slot nuts, 24 studs (4 each: 3", 4", 5", 6", 7" and 8" length), 1 T-slot cleaner, two 1¾" wide U-clamp sets (consisting of 2 each 5" studs, flange nuts, ball joint U-clamps, and 9⁄16" T-slot nuts), and storage rack.

MI-TEE-BITE PRODUCTS LLC

Pitbull® Low-Profile Clamps

Workholding clamps have a low gripping profile that generates high clamping forces compared to other compact clamps. Use Blunt Edge models for general purpose applications. Brass Blunt Edge models provide a firm hold without marring. Knife Edge models are your best choice for aggressive stock removal.

Hand Knob

Knurled Knob

Dog Point Screws

Dog point prevents damage to end threads.

Hand Knob—Use when hand tightening is necessary for holding or clamping. 4-point aluminum knob. Steel stem with black oxide finish.

Knurled Head—Use for light clamping and holding. Knurled head allows better grip. Head and stem are steel with black oxide finish.

Fixture Clamps

Cam-action workholding clamps provide fast, strong clamping, and have a low profile design. Simple, 2-component design helps keep maintenance costs low, and the small size allows more parts per load.

Note: Clockwise rotation is recommended. Workpiece stop should be on the right of clamp.

Dovetail Fixtures and Cutters

RAPTOR WORKHOLDING PRODUCTS

▪ For accessories, see Grainger.com®

Made to hold part on 4- and 5-axis CNC machines. Fixtures provide rigid clamping while exposing 5 faces of the workpiece. Spring-loaded clamps require a small amount of material to hold the workpiece. Prepare all parts with a single dovetail and utilize the same fixture for every part.

Kipp®

Vertical and Horizontal Toggle Clamps

These clamps feature maintenance-free, high-quality swivel bushings. They allow for a consistent use of force when opening and closing. Optimum stability is achieved through the conical clamping arm with U-profile. Can be used on a variety of fixtures for applications where hold-down action can replace fasteners. Models with safety interlock include an internal bar lock with automatic safety catch.

Verical Handle—Feature 2 to 3 times the holding force with fewer pinch points for safety and durability.

Horizontal Handle—Provide a low profile for applications where minimum vertical height is required.

DESTACO

Vertical, Horizontal and Compact Toggle Clamps

Feature corrosion-resistant stainless steel rivets and molded grips for safety. Can be used on a variety of fixtures for applications where hold-down action can replace fasteners. Models with Toggle Lock Plus release lever prevent accidental opening due to vibration.

Vertical Handle—Some models feature 2 to 3 times the holding force with fewer pinch points for safety and durability. Flat cushion neoprene spindle.

Horizontal Handle—Provide a low profile for applications where minimum vertical height is required.

Compact Horizontal Handle—Low-silhouette hold-down clamp features a handle that can be operated from either side or from behind.

For **Cam Levers** in additional sizes, finishes, and materials, go to **Grainger.com®.**

Cam Levers

Single-Action Cam Levers—For clamping that requires quick adjustment, and where space is limited. For external thread levers, handle rotation is required for fixed stud insertion/removal for mating application. Available in lightweight cast aluminum with powder-coat finish or stainless steel with polished finish.

- Black matte finish
- External threads are fixed into the handle

Adjustable Cam Levers—Used when the position of the tensioning lever relative to the axis of tension only permits one specific position. Cam levers allow this position to be adjusted using a screwdriver. Screwdriver slot in stud allows for fine insertion/removal from mating application; handle rotation not required. Available with black powder-coated cast-aluminum handles or stainless steel handles.

- Adjustable with slotted head

DAVIES DESIGNERS & MANUFACTURERS OF KNOBS, HANDLES, CAGES & CUSTOM PLASTIC COMPONENTS

INNOVATIVE COMPONENTS, INC. for Innovative Solutions

Knobs and Levers

T-KNOBS

For moderate- to heavy-torque applications. Black polypropylene knobs have steel zinc insert and satin finish. Heat-resistant phenolic knobs have brass insert or steel, zinc-plated screw.

3-PRONG

Designed for clamping and quick adjustment. Rounded edges make knobs easy to grasp and turn. Knobs up to 1¾" dia. are 3P style; 2" dia. and up are RT style.

4-PRONG AND 4-LOBE

For high-torque or heavy-duty clamping applications. Soft touch 4-lobe knobs have over-molded rubber layer for comfortable, nonslip grip.

SNAP-LOCK

Molded with a hex hole to accept standard locknuts, hex nuts, hex bolts, and hex cap screws. Fasteners can be easily pushed into position and snapped into the hex hole for a secure fit.

FLUTED

Large flutes and wide hub design for heavy torque applications, clamping, and quick adjustment. Easy to grasp and turn. Knobs up to 1¾" dia. are F2/F4 style; 2" dia. and up are F6 style. Soft touch knobs have over-molded rubber layer for a sure, comfortable grip.

STAR

For high torque applications, with rounded edges for comfortable grip. Impact- and scratch-resistant black polypropylene knobs have steel zinc insert. Knobs with locking thru taps have molded lock nut for vibration resistance. Soft touch knobs have over-molded rubber layer for nonslip grip.

BALL

Multipurpose black knobs with satin finish hide scratches and dirt. Soft touch knobs have over-molded rubber layer for comfortable, nonslip grip.

UNIVERSAL

Self-tapping/threading black polypropylene knobs are vibration resistant. Fit multiple thread sizes. No metal insert.

PULL

Designed for pushing, pulling, and lifting. Black color, impact and scratch resistant.

LONG TAPERED

Designed for heavy-duty applications. Impact and scratch-resistant black polypropylene knobs have steel zinc insert.

KNURLED

Deep, coarse knurls and rounded edges provide sure grip. Impact and scratch resistant, and designed for quick adjustment. For applications where clearance is an issue. ABS thermoplastic knobs are heat resistant to 250°F; nylon to 275°F.

Starrett® GENERAL® WESTWARD brown & sharpe Mitutoyo

Dial Calipers

- Stainless steel construction (except No. 3YWH2 which is reinforced fiberglass)

Measure I.D., O.D., depth, and steps. All except No. 2ZUF1 include fitted case. No. 5RCH9 has a natural finish and includes a declaration of conformity. Nos. 2ZUF2, 2ZUE3, and 2ZUE7 have a polished finish; No. 2ZUE7 has a covered rack depth rod. No. 5RCJ1 features a thumbwheel. No. 4CGJ6 has satin chrome finish. No. 4LA87 features carbide O.D./I.D. jaws. No. 4CGK1 has satin chrome finish. No. 5RCG4 has TiN-coated wear surfaces. No. 2ZUF1 has long nib jaws.

Mitutoyo Starrett® WESTWARD brown & sharpe

Outside Micrometers

Electronic—IP65 units are resistant to jet-directed and hose-directed fluids. IP67 units provide protection against immersion.
- Zero set
- LCD
- In/mm selectable

Mechanical Digital—All units over 1" include a standard to verify instrument setting.
- Spindle lock

Vernier—Ratchet stop or friction thimble for exact, repetitive readings. Include a standard bar except for 0" to 1" and 0 to 25mm models.

Mitutoyo

SPC Wireless System, Connecting Cables and Interface Adapter

For interfacing wireless digital measuring tools to a PC. No. 4CGX4 Mini Processor can print measurement data from digimatic gages or perform statistical analysis, has RS-232C output and GO/NG judgment output. U-Wave wireless system requires no transmission cables. SPC Cable No. 1ARA4 is 6-pin.

Starrett® Mitutoyo WESTWARD®

Depth Micrometers and Gages

DEPTH MICROMETERS

Vernier—Ratchet thimble. Westward units have locking clamps. Starrett units include spanner. All include case.

Dial—Analog dial features rotating bezel and easy-to-read graduations. Has spring-loaded thimble.

Digital—Automatic shutoff and ratchet thimble. No. 4GPY7 has push-button controls with zero set and data hold functions. No. 4KY22 is fluid resistant.

DEPTH GAGES

Dial—Analog dial features rotating bezel and easy-to-read graduations.

Digital—No. 2YNK3 features English/Metric/Fractions.

Electronic—Include fitted case and battery.

WESTWARD brown & sharpe Mitutoyo Starrett®

Dial Indicators

- Include lug-on-center back
- Conform to American Gage Design (AGD) standards

If tolerances are bilateral, a balanced dial is preferred. If tolerance is unilateral, a continuous dial is preferred.

Mitutoyo—Stainless steel stem. Glare-free crystal has scratch resistant coating. Nos. 4CGP7, 5C706, 4CGP5, 1ARD3, and 4CGR1 include jeweled bearing. No. 1ARD1 features flat back.

Starrett—Feature jeweled bearings. Hardened steel neck with knurled bezel. All have white dial except Nos. 2ZUJ1 and 2ZUJ2 which have yellow dial.

Brown & Sharpe—These indicators feature revolution counter, tolerance pointers, and ball contact points.

Westward—Feature revolution counter hand and adjustable tolerance limit marker. Knurled bezel and hardened stainless steel rack. No. 6XU93 comes with 25-lb. pull magnetic back.

**** Non-jeweled bearing. † Metric with 3-8" stem.***

WESTWARD Mitutoyo

Electronic Indicators

- ⅜" stems
- Include battery

Features include LCD display, in./mm conversion, hold function, zero set, and power On/Off.

WESTWARD

Feature lug-on-center back.

MITUTOYO

Digimatic indicators have absolute linear encoders. SPC output. Feature change counting direction. Flat back except Nos. 4GPX9, 4GPY2, 1ARJ6, and 1ARJ7.

ID-C Series—Feature GO/±NG judgment. 330° rotating bezel.

ID-S Series—Unlimited response speed. No. 1ARJ6 includes a lug on back. No. 1ARJ7 features absolute encoder scale, change counting direction feature, and output port dust cap.

ID-U Series—Slim package design for easy mounting.

Westward No. 2YNK1

ID-C Series No. 6NRA1

ID-S Series No. 5C711

ID-U Series No. 1ARU1

Dial Test Indicators and Sets

Comparative instruments check against known standards. Also use to zero-out set-ups.

BROWN & SHARPE

All models include 0.25" dia. extension with dovetail, point wrench, and certificate of accuracy. Nos. 5RCH0 and 5RCH1 also include universal dovetail mounting attachment.

MITUTOYO

Antimagnetic. No. 4CGR9 has ruby point. No. 4CGR4 has long point. No. 4CGR5 has 20° tilted face.

STARRETT

708 Series includes dovetail mounts and tool post holder. 709 Series has angled head. 711 Series includes universal shank with long and short arm, and body clamp. 196 Series has universal back plunger. All include 3 contact points. Nos. 2ZUJ5, 5UAL6, and 5UAL5 include adapters. Nos. 5UAL5 and 5UAV0 include 4 attachments. No. 5UAV0 is antimagnetic.

WESTWARD

Includes 2 dovetails and case. Conforms to American Gage Design (AGD) standards.

Starrett® WESTWARD brown & sharpe

Combination Square Sets, Heads, and Blades

SETS

Used for layout, setup, checking heights and depths, and setting angles. Also used as squares, center gages, bevel protractors, rules, and straight edges. 2-pc. sets include square head and blade. No. 5UAP7 has double square head. 3-pc. sets include blade (scale), center, and square heads. 4-pc. sets include blade (scale), center, square heads, and protractor.

HEADS

- Work with 12" to 24" blades

Square—Have precision ground 90° square face and 45° miter face and come with hardened scriber and spirit level.

Center—Allow center to be scribed on end of round stock.

Protractor—Feature spirit level and revolving turrets. Capable of direct reading, double graduation, and full 0° to 180° in opposite directions.

BLADES

Satin chrome finished for sharp, glare-free graduations.

WESTWARD Starrett® Mitutoyo

Protractors

Magnetic Digital—Same features as electronic digital, but includes a magnet embedded on both sides with a 35-lb. pull. Ideal for circular saw angles.

Electronic Digital—These units calibrate easily and feature reading hold and alternate reference (zero) functions. Frames are made of machined aluminum.

Digimatic Scale Units and Mill/Lathe Readout Kits

Digimatic Scale Units—Provide precise horizontal or vertical (depending on model) linear measurement and positioning for workpieces and machine tables. Feature origin-set, zero-set, zero/ABS, and power on/off. Measurements are shown on the LCD and can be captured to computer via the SPC port. 3.5mm-thick beam can be installed on almost any surface, fixture, or machine with included mounting brackets. SPC cables sold separately, see page 2328.

- Resolution: 0.0005"/0.01mm

Digital Mill Kits—Offers mill function along with standard functions: preset, zero set, zero and pitch approach machining, and bolt hole circle calculation. 7-digit LED display. Connectable with AT715 electromagnetic scales and AT100 series glass scales.

- Resolution: 0.0001"/0.001mm

Digital Lathe Kits—KA counter with 7-digit LED offers lathe and standard functions.

Gage Sets

SMALL HOLE

Quickly gage deep or shallow holes, slots, and grooves. Hole size is obtained by measuring over contact points with a micrometer. Gaging surface is full round and fully hardened with a flat bottom.

TELESCOPING

Plunger expands in hole to be measured and locks in place; final hole size is obtained by measuring over contacts with a micrometer.

BORE

Feature carbide anvils, insulated grips, chrome-plated handle, and extension holder. Self-centering. Include case.

Dial—Have 0.0005" graduations. Individual bore gages have 0.0001" graduations.

Electronic—Preset master size with recall ensures absolute reading. Includes bar graph and numeric display, as well as demonstration disc. Has 0.00005"/0.001mm graduations.

Plug and Thread Gages

Vermont Gage

GF GAGE

Provide accurate measurement standards that are perfect for the shop floor. Compare hole and slot dimensions or locations to specific tolerances. Use as masters to calibrate measuring equipment or to gage parts directly.

Class X—These gages are for use where greater precision is needed.

Class ZZ—Practical gages for use where precision and speed are important.

Thread Gages—Mercury-threaded gages are ground, precision lapped, and inspected to every thread element. Made to X-tolerance. Class 2B are for general applications such as bolt, nut, screw, and similar threaded fasteners. 6H tolerance gages are metric.

11-Hole
No. 45TY04

23 Hole
No. 45TY06

Tri-Blocks

These steel blocks from Suburban Tool, Inc. are carburized and hardened to Rockwell "C" and ground on all 6 sides. No. 45TY05 has ½" though hole in 2" x 3" face. To allow screw mounting and conversion into angle plates and other precision set-ups, No 45TY04 has drilled, counter-bored, and 5/16-18 tapped holes and Nos. 45TY06, 45TY08, and 45TY09 have 3/8-16 tapped holes and matching clearance.

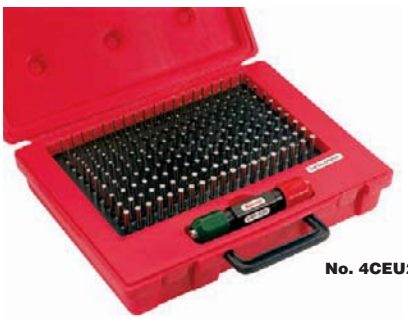
Vermont Gage Starrett®

Pin Gage Sets



- 0.0002" tolerance; 0.005mm tolerance for Metric sizes
- 0.001" increments; 0.02mm increments for Metric sizes
- 2" length

Use for determining small hole sizes, for gaging slots, and for finding hole distances. Vermont Gage and Westward sets are Class ZZ. Starrett sets are Tool Room Grade. Individual Pin Gages and Handles are available online at Grainger.com®.

Magnifiers

BAUSCH+LOMB ESCHENBACH OPTIK Better vision. Better life.

Pocket Folding Magnifiers— No. 3G977 is a single-lens magnifier. No. 3G983 is a 3-lens magnifier which can be combined to produce 7 different powers. No. 3G981 is a 2-lens magnifier which can be combined to produce 3 different powers.

easyPOCKET Illuminated LED Magnifier—Ideal for use in dimly lit locations with distortion-free aspheric/diffractive hybrid lens. SMD LED technology never needs to be changed. Automatic contact mechanism allows the light to conveniently go on and off without a switch. Pull tab on right side and easyPOCKET slides out of the left side.

Handheld LED—Bausch & Lomb magnifiers have acrylic lens and include case. Eschenbach magnifiers combine German optics and LED lighting for inspection anywhere. Aspheric lens with hard coating and detachable cover. 2 batteries included.

Hastings Triplet—Adjustable for individual focus. Leather case included. No. 3G995 allows illumination to fall on the magnified area. Nos. 3H431, 2RPA4, and 3H433 have 3 separate glass lenses bonded together to form a compound lens.

Double Lens—2 plano-convex glass lenses provide a corrected wide, flat field.

Coddington—Single thick lens with a central groove diaphragm. No. 3G993 uses 2 AA batteries (not included).

Packette—Optical quality aspheric lens.

Articulated Arm Lamp Magnifier—Clamp to surfaces ¾" to 1" thick.

Illuminated Magnifier Heads and Handles—Order illuminated handles and prefocused lenses separately. Aspheric lenses with hard coating.

Stereo No. 54GF79

Toolmaker's No. 54GF77

Microscopes

Mitutoyo

- 120VAC; 50/60 Hz

Stereo Microscopes—Nos. 54GF79 and 54GF80 feature crystal sharp, high-color contrast image with excellent depth of field. Always in sharp focus at all magnifications. The Parfocal Optical System allows relaxed, strain-free viewing. No. 54GF79 is a high-accuracy, 4-step magnification stereo microscope. No. 54GF80 features a magnification charger which is ideal for small part assembly. No. 54GF78 has stereo tube which can be rotated a full 360° for viewing at any angle. Bilateral zoom control knob adds convenience and increases operator efficiency. Diopter adjustment for both eyepieces.

Toolmaker's Microscope—Well-suited for measuring dimensions and angles of machined metals. Compact body for use on shop floors with limited space. Angle measurement is performed easily by turning the angle scale disc to align the cross-hair reticle with the workpiece image. Illumination intensity can be adjusted.

Surface Testers and Gages

Mobile Surface Testers—M 300 Mobile Nos. 446F43 (with 2 micron stylus) and 446F44 (with 5 micron stylus) include the option of wireless connection between the evaluation unit and drive unit. Feature integrated memory for results of up to 40,000 measurements and 30 profiles, 16 language capability, and integrated thermal graphics printer. For use with PHT probe range. PS 10 Mobile Nos. 446F42 (with 2 micron stylus) and 446F41 (with 5 micron stylus) feature large, illuminated 4.3" TFT touch display. Back up data as TXT, X3P, or PDF files. Power supply independent operation allows over 1200 measurements without having to recharge. Horizontal, vertical, and upside down measuring positions. 31 surface parameters offer the same range of functions as a laboratory instrument.

Surface Tester—Detachable detector/drive unit evaluates 39 surface parameters. Backlit color LCD reads vertically or horizontally and displays evaluation curve. Micro-SD card. USB, RS-232, and SPC output. Includes precision roughness specimen.

Pocket Surf® IV—Displays Ra, Rz, or Rmax. Simple one-button operation. Single-button calibration process does not require additional tools. Features 4 switchable probe positions: axial (folded) or at 90°, 180°, or 270°. Readout of the measured roughness value, in microfiches or micrometers, within half a second after the surface is traversed. Shows out-of-range (high and low) and battery signals. Operates horizontally, vertically, and upside down. Includes 9V battery. No. 40TF45 has 10um radius tip. No. 40TF46 has 5 um radius tip.

Surface Gages—No. 6NAZ1 has 12" and 18" spindle lengths and 4 gage pins. No. 6NAY2 features 9" spindle length and 2 gage pins. Both gages include scriber.

Durometers and Calibration Sets

- Blunt-taper indenter models have 35° tip angle
- Sharp-point indenter models have 30° tip angle

Provide quick and accurate results when testing elasticity of natural rubber, neoprene, polyesters, PVC, leather, nitrile, wax, vinyl, cellulose acetates, polystyrol (polystyrene), and other materials. Shore A scale is for flexible materials, and Shore D scale is for hard materials. Include case.

Analog—Peak retaining hand for error-free readings.

Digital—Feature zero-set and power On/Off, as well as a Data-hold feature that retains readings on the LCD display. Mitutoyo models have an SPC output for downloading readings to computer.

Granite Surface Plates and Accessories

Note: More sizes are available, go to Grainger.com®.

CRYSTAL PINK GRANITE SURFACE PLATES

Calibration is NIST certified. Meet U.S. MIL-I-45208A and Federal Spec. ASME B89.3.7 for flatness.

Grade B Toolroom plates are for production checking work throughout a shop.

Grade A Inspection plates are for general quality control work.

Grade AA Laboratory plates are for precision operations in constant temperature gaging rooms and metrology departments.

STONE CLEANERS

Prevent abrasion of tools by dirt and other foreign particles. Waterless cleaner is also a degreaser and rust inhibitor and should be used without water.

Milling and Mill/ Drill Machines

MILLING

Step Pulley—Use belts to manually change speeds. For more information, see Grainger.com®.

Variable Speed—JET models have hand-wheel adjustment to set speed and internally cooled spindle head. For more information, see Grainger.com®.

CNC Vertical—Feature 3-stage power downfeed with automatic stop, internally cooled spindle head and heavy-duty spindle brake. ACU-RITE MILLPWR® CNC 2- or 3-axis control.

MILL/DRILL MACHINES

Provide accurate milling, drilling, and boring capabilities. Sharp models have a 10" to 20" lathe capacity.

Dayton JET POWERMATIC

Drill Presses

GENERAL PURPOSE

Feature cast-iron base and adjustable worktable height. For use in woodworking shops, maintenance shops, and light industrial applications. Radial arm drill presses are for use on large, heavy work or where many holes need to be drilled. Designed to allow the head to move horizontally.

HEAVY DUTY

Belt-drive presses feature cast-iron head and adjustable depth stop. For maintenance shops and industrial applications. No. 2LKU8 Precision Micro Drill is for instrument, electronic, jewelry, and research applications. JET® models feature 45° table tilt and a wide range of spindle speeds. Dayton® presses offer digital readout of depth and speed.

PRODUCTION

Designed with heavy-duty motors and precision machined surfaces for heavy workloads.

Step Pulley—Spindle speeds are limited by pulley size. Speeds can be changed to match the material being drilled.

Variable Speed—JET models Nos. 52XJ02 and 52XJ03 feature power down feed system that allows a manual switch from tapping to hands-free drilling in 3 speeds. Nos. 3WRN7 and 3WRP9 have a safety collar, 6" stroke for deep hole application, and 2¼" quill. Speeds are adjusted using a hand wheel.

Machining Vises

Drill Press—Rectangular shape for drilling, tapping, reaming, and grinding. Can be used lying on base, sides, or end.

Angle—For angle set ups from 0° to 90°. Available with angle, trunnion, or swivel bases.

Cross Slide—For precise X and Y axis positioning.

Milling Machine—For milling and grinding. Hold workpiece between a stationary jaw and a moveable jaw.

Toolmaker's—For tool manufacturing, milling, and grinding. Fixed base and one moveable jaw.

Self-Centering—For use when accurate work centering is required. Have two moveable jaws.

Lathes

Wood Lathes—Headstock slides the full length of bed and pivots 360° with 7 positive locking positions. Includes 4" cast iron riser to choose work height.

Bench Lathes—Belt-drive lathes allow quick changing between standard and metric gears.

Engine Lathes—Feature micro-carriage stops, integrated coolant system, and foot brake.

Large Spindle Bore Lathes—Universal gearbox allows inch, metric, diametral, and module pitch threads. Feature 5-position automatic carriage stop, integrated coolant system, and removable gap for large dia. workpieces.

Metal Turning Lathes—3-phase hollow spindle lathes are excellent for heavy-duty jobs, such as large oil pipe work, large aerospace parts, and heavy shaft turning.

How to Select a Live Center

1. Determine machine's taper.
2. Determine the weight of the workpiece, while taking cutting forces into consideration. Weight of workpiece noted next to each item is the maximum weight the live center can safely carry.
3. Determine required operating speed.
4. Determine point style that best suits application. Standard points are best when rigidity and weight requirements are most important. Tracer points and Long points offer maximum tool clearance for typical lathe applications.

ROYAL PRODUCTS

Live & Dead Centers

Bull Head Point centers are shorter than pipe heads, reducing interference in blind center hole applications and ensuring that the load is positioned over the bearings. Tri-Bearing design enables both high rpms and good load ratings. Quad-Bearing centers (and No. 41LJ90) feature Royal Roto-Shield™ technology with a live center point machined from a solid bar incorporating a specially-shaped steel coolant slinger.

Horizontal and Miter Band Saws

HORIZONTAL

Dry Cut—Dayton® saw features swivel-vise jaw, adjustable blade guides, and auto shut-off at end of cut. On JET® No. 42W915, head swivels for a max. cut at 45° and 60°. Features hydraulic down feed control and enclosed stand with handle and wheels. No. 42W917 can be used in horizontal or vertical position.

Wet Cut—JET® No. 42W919 has hydraulic feed system and auto shut-off. JET Elite model No. 20UT92 features swing-away panel. Increased saw bed height. Dake® models feature hydraulic control. Dayton® No. 21C004 has rapid-acting vise and coolant tank. Marvel® models feature automatic indexing. Nos. 53RU25, 419J50, and 410J48 are post-style saws. SHARP wet cut saws are designed with programmable touch screen control of input quantity, material length, feed vise position, and auto kerf loss compensation. They also feature display blade speed, feed pressure, and auto shut down.

MITER

Dry Cut—Dual-mitering (swivel) No. 31XU48 cuts metals and more. Semiautomatic saw features hydraulic vise, feed, and return. Has automatic shut-off/broken blade feature. 1-phase No. 15V791 has a dual miter head up to 60°. Features hydraulic and manual descent.

Wet Cut—Dayton® saw features counterbalanced hydraulic feed system and coolant system with chip-flushing hose. JET® No. 42W918 features swivel head, quick-lock vise, coolant system, adjustable material stop, and hydraulic down-feed. JET Elite No. 20UT91 features swing-away panel that relocates saw controls to a single location, offering finger-tip operation of most major saw functions. Tungsten carbide blade guides with precision bearings stabilize the blade for increased accuracy and extended blade life. High-speed Marvel® mitering saws have swivel heads to help cut through metal. No. 53RU30 has hydraulic vise.

Vertical Band Saws

WOOD-CUTTING

Dayton—Saws include cast-iron table, adjustable blade guides, and an adjustable fence.

JET®—14" bandsaws have cast-iron frames. No. 42W931 features 6"D resaw capacity. No. 42W932 features 12" resaw capacity and poly-V belt drive.

Powermatic®—Quick tension lever allows blade changes. Features an extra large table.

WOOD- AND METAL-CUTTING

Dayton—Rack-and-pinion blade guide adjustment. Include built-in chip chute, rip fence, miter gauge, and blade cleaning brush.

JET®—Designed with a cast-iron frame, solid 1-pc. steel base, and exclusive gear box design that cuts a wide variety of materials including nonferrous metal and plastic.

VERTICAL CONTOUR SAW

Heavy-gauge steel blade provides a rigid foundation to help reduce vibration during cutting, while the manual blade tension device helps assure proper tension with just about any blade width. 2 balanced cast-iron blade wheels are preloaded with ball bearing hubs to assure long life even when running at high speed. Upper guide arm is adjustable for varying material sizes. Saw is constructed of cast iron to reduce vibration while cutting and has one slot to the right of the blade to accommodate accessories.

METAL-CUTTING

Dayton®—Feature upper blade guide rack-and-pinion adjustment. Include rip fence, chip blower, speed reducer, safety Off button, upper and lower carbide blade guides, cast-iron pulleys, and built-in chip chute. No. 4TK02 has an LED readout and blade welder.

Marvel—These saws are designed with front-mounted speed control, variable feed pressure, T-slotted work table, blade break/stall detection, quick-action vise with jaws that shift right and left, and adjustable automatic stops. Cast-iron wheels are 19" dia.

Carbon Steel Food Service Band Saw Blades

Band Knife—Manufactured from high carbon steel, heat treated, and suitable for cutting fresh and boneless meat, fish, bacon, cold cuts, and vegetables. Features double-bevel edges.

Meat Cutter—State-of-the art tooth geometry handles fresh, frozen, boneless, and bone-in applications. Polished high carbon blades are laser etched for easy identification and provide fast, smooth, and clean cuts for fish and poultry.

Roller Head Stands

Chrome-plated steel rollers with double-sealed ball bearings. Mounting holes in base. Horizontal and "V" heads are interchangeable on common base.

"V" Roller Head—Used to support bar stock, pipe, tube, conduit, or other round material. Two 2" x 5" rollers accommodate material from 1" to 18" in diameter.

Horizontal Roller Head—Used to support bar stock, sheet metal, beams, or other flat material. Single 2" x 14" roller protrudes above the head casting, allowing use with material wider than the roller.

QXP™

Tri-Master®

LENOX

Band Saw Blades — Production

Note: Blades 15 ft. and above can be found on Grainger.com®.

QXP™
- M-42 bimetal
- Extreme positive rake tooth form for production cutting of solid metal materials
- Optimized for sawing mild/alloy steels, tool steels, and stainless steels

RX+®
- M-42 bimetal
- Patented reinforced tooth design resists tooth strippage
- For sawing structural steel and tubing

Tri-Master®
- Carbide-tipped
- Triple-chip tooth design
- Ideal for sawing nonferrous metal, abrasive materials, and wood

Carbon Band Saw Blades

MORSE THE M.K. MORSE COMPANY — SUPPLIER DIVERSITY

Use on carbon steels, composition board, cork, graphite, low-alloy steels, nonferrous, brass, bronze, aluminum, plastic, and wood.

Note: Blades 15 ft. and above can be found on Grainger.com®.

Flex-Back—High-carbon steel with individually hardened tooth tips for speeds up to 15,000 SFM.

Hard-Back—Stiffer for straighter cuts and heavier feed pressure.

No. 4YB36

No. G2063

Bi-Metal Band Saw Blades

Note: Blades 15 ft. and above can be found on Grainger.com®.

Matrix II—General purpose blades for cutting materials such as aluminum castings, carbon steel, and structural steels.

M42—Production blades with hardened M42 high speed steel teeth for cutting alloy steels, mold steels, carbon steels, and structural steels.

Challenger—Short production and maintenance blades for cutting low-alloy, stainless, and carbon steel in addition to brass, bronze, and aluminum.

Maverick—All-purpose blades for cutting metals, nickel based alloys, mild steel, stainless steel, alloy and tool steel.

BAILEIGH

Hydraulic Press Brake

- Bends a maximum capacity of 0.25" mild steel
- Includes a hardened multi-Vee bottom die
- Ships fully assembled

With a 2 HP motor, this brake is the perfect choice for smaller projects that require quick bends; produces 42 tons of pressure and runs on 220V single phase power, so it will work in just about any shop, even when power is limited. Easy-to-use unit is controlled by a simple foot pedal, so your hands are free to guide the material. The 19.5"L manual back gauge makes it simple to create repeat parts.

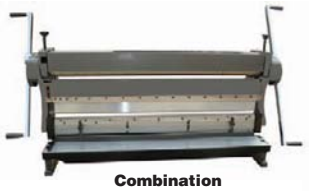
Dayton BAILEIGH JET

Box and Pan Brakes



Use for box, pan, and reverse bending of sheet metal.

Dayton—Include extension handles, counterweights and apron stop.

Baileigh—Manual Brake offers a 22-finger assortment. Magnetic Brake has a bend-angle indicator and stop rod for repeatability, an adjustable beam for varying sheet thickness, and a 17-finger assortment.

JET—Installed fingers can be used as a full-length nose bar, turning machines into straight-bending brakes. Stop rod provides repeatable bending. No. 48RJ44 has section fingers that can be easily removed. No. 48RJ42 has welded steel plates with heavy truss rods and braces. Bed and apron are bored in line. Counter weights have adjustable leverage. Floor Brake No. 18F202 has black ceramic-coated fingers. Hydraulic spring assists in raising handle.

Dayton JET BAILEIGH

Shear, Brake, and Roll Machines

Ideal for sheet metal applications. Rolls have wire grooves.

Dayton—Feature dual-edge blade which is adjustable and reversible. Hold-down is positioned to allow visual location of the shear line. Bend mild steel with high carbon, heat-treated steel male dies. Continuous female V-shaped forming die. Rolls to an unlimited maximum height stop-block. 2 extension bars with 90° angle. Iron adjustable length stop.

JET—Shear on No. 42W893 features right- or left-hand operation for use on mild steel, aluminum, brass, copper, lead, plastic, and zinc. Removable fingers permit angle, channel, and box bending operations. Include set of male dies, set of female dies, dual-edge shear blade, spring-loaded work hold-down, and back gauge. Electric Plate Roller No. 53ZC94 uses 3 rolls with 2 drive rolls, made of precision turned, ground, and polished carbon steel. Heavy-duty frame and base for precise sheet metal rolling. Foot-control assembly with emergency stop.

Baileigh—Bench-mounted, manually operated unit No. 15VZ85 has a manual sheet metal shear with a spring-loaded clamp. Includes removable and movable segmented top fingers on brake. No. 31XV42 is hydraulically driven mild steel roll former. Features digital readout for tracking the position of the back roll and dual emergency stop cables.

Hydraulic Shear
No. 15V783

Pneumatic Shear
No. 18F220

Foot, Pneumatic, and Hydraulic Shears

Foot Shears—Use to shear mild steel, plastic, lead, zinc, aluminum, brass, and copper. Dayton® models include pedal stops, handwell, double-locking back gauge with microadjustment, and front work stop. No. 13W878 also features transparent finger guards, embossed scales, and front arm extensions.

Pneumatic—Precise bed and beam alignment help ensure accuracy. Working bed adjusts for correct set up according to the blade clearance. Low cutting angle cuts narrow strips without twisting. High-quality cast-iron frame eliminates deflection across the blade span and framework.

Hydraulic—Baileigh® models are 220V, 3-phase and include back or side gauges. No. 15V784 has a centralized control panel to select jog, single, or continuous cutting modes. Dial adjusts the rake to eliminate curl and twist. Upper blade is 2-sided; lower blade is 4-sided. No. 31XV78 features a 60" wide cutting capacity and multiple shearing edges. Produce one cut with one foot pedal push, or remain in an auto mode by holding the foot pedal down. Hold-downs clamp the material to the feed table so it doesn't lift when being sheared. No. 15V783 has top and bottom shearing blades with multiple cutting edges and hold-down carriage with 9 fingers. Switch allows the fabricator to jog the blade, do one cycle or cut, or go into an automatic mode.

Alligator Shears—Hydraulic shear has ample 3 HP motors for effortless shearing, saving time and increasing productivity.

Notchers

Metal Notcher
No. 13W870

Metal Notchers—Use Dayton for notching box, chassis, and panel blanks. Lower blade can be reversed and sharpened. Triangular ram controls cutting head alignment. No. 12G601 has foot control pedal. JET No. 42W825 has a fixed cutting angle of 90° and can notch up to 6" x 6" in one manual stroke.

Tube Notchers—No. 18F312 is a 6-jaw radial vise with clamping jaws. Features 1¼" hardened Thompson shaft with replaceable tips and slotted carriage for offset notches (no shims).

Hole Saw Notcher—Features 360° rotation and offset notching with up to ¾" of vertical movement. Vertical motor orientation reduces vibration. Includes integrated drawer, multiple scales, alignment guides, and chip guard.

Arbor Presses

Note: Pneumatic and Compound Arbor Presses are available on Grainger.com®.

Standard—Dayton® models provide heavy pressure, and feature a machined table with a slotted, removable, 4-position revolving anvil. JET model has precision-machined base, ram housing, framework, and 4-position bottom plate. Dake® single-leverage press has a shimmed ram cap and adjustable handle.

Ratcheting—Use for consistent application of force when needed for broaching or pressing large items. Ratchet device lets the lever be used in the most convenient position. Has counterweight for rapid handle return and quick ram advance via the side-mounted handwheel. Rotating table has 4 slots.

H Frame Hydraulic Presses

For pressing, bending, and straightening operations.

Manual—Dake models feature a single-speed hand pump, and a large dia. single-acting polished piston with a top-mounted gauge. Cylinder can be relocated to the right or left. Table is adjustable. JET® hand-operated presses have pressure gauge for direct pressure readings. Hand crank raises and lowers table, and ram moves laterally.

Electric—Dake® models feature lever control ram advance and a double-acting cylinder. 1-hand ram positioning with 4-way valve hydraulic control. Edwards® presses have rolling cylinder for maximum adaptability, while open-sided design allows longer material to pass through the frame. Electric foot pedal has integrated jog control. Includes hydraulic-assist adjustable worktable height, pressure gauge, and 20-ft. quick-connect hoses. Nos. 454R58 and 454R60 offer adjustable up/down stroke control. Adjustable PSI allows the user to set the desired pressure accurately.

Air—Feature industrial-grade hydraulic components, fully-welded solid steel frames, and V-block set. No. 31XV11 has adjustable table and includes pressure regulator and gauge. Made of rigid, electro-welded steel. No. 31XV13 has foot pedal and manual hand pump to lift and lower the working table.

METALpro marvel BAILEIGH

Ironworkers

Use for punching, shearing, forming, bending, pressing, and notching.

Metalpro—Punching station is punch-ready with 2" die holder, stripper, and punch retaining nut. 3-in-1 shear included.

Marvel—Heavy-duty dual cylinder ironworkers feature 5 workstations and simultaneous dual operation. Power cavity features single and multi-vee press brakes, pipe notcher, and louvre punch. Punching station has double-acting punch cylinder, see-through stripper, and 2-hole die holder.

Edwards—All feature electric stroke control, punch assembly with pedestal die table, flat bar shear, and angle shear. Can be used as open tooling stations. 4 available workstations except Nos. 53DK38 and 53DK39 which have 5.

Baileigh—Hydraulic ironworkers feature 5 integrated stations for punching; flat bar, angle, or bar shearing; and rectangle notching. Pure vertical hydraulic movement at each station produces clean cuts, notches, and holes. Large, 2-piece worktables accommodate oversized materials. Tooling can be changed in seconds. No. 31XW04 has a dual-operator design that lets 2 people work simultaneously at opposite ends of the machine without losing power at either station.

BAILEIGH

Water Jet CNC

- 3-phase
- 480VAC

Cuts glass, granite, ceramic, plastic, foam, mild steel, stainless steel, titanium, aluminum, and copper. Cantilever design allows for much easier material loading and unloading. Exclusion of moving parts allows for smooth operation. Slide ways are covered and protected from water for long life. Frame is laser cut, interlocked, and welded for rigidity and accuracy. Includes proprietary abrasive auto feed system.

DEWALT Dayton JET metabo

Bench Grinders and Buffers

GENERAL PURPOSE GRINDERS

DeWalt®—Designed with precision-machined aluminum tool rests. 12½" distance between wheels.

Dayton®—Include tool rests and drill bit sharpening plate. Slow speed model No. 49H004 is designed for sharpening, and has a magnifying lens and locking rocker switch. Includes abrasive wheels (60 and 120 grit). Variable speed No. 49H008 includes open wire wheel, 60 grit abrasive wheel, and flexible worklight (bulb not included).

HEAVY-DUTY GRINDERS

Dayton®—All models include eyeshields, adjustable tool rest, and 2 grinding wheels, except No. 2LKR5 which includes one 36-grit wheel and one wire brush. No. 1FYX2 includes stand and quench pot. Grinder packages include grinder, wheel dresser, and stand with quench pot.

JET®—Feature large eye shields with quick adjustment, cast-iron guards and dust chutes, and adjustable cast-iron tool rests. Include 1-pc. quick-adjusting spark guards, fine and coarse vitrified grinding wheels. Nos. 18F216 and 18F217 have heavy-duty guarded toggle switch.

Metabo®—Feature dust-protected emergency stop switch, adjustable workpiece support without tools, large spark protection guards, and vibration-dampening rubber feet. No-volt release switch prevents unintentional startup after power cut. No. 38D139 is built for detailed sharpening, grinding, and deburring tasks. Nos. 38D140 and 38D141 are powerful enough for big jobs with die-cast aluminum protective covers.

Belt Grinders

- For replacement belts see Grainger.com®

Baileigh—Ideal for smoothing over burrs on metal, chamfering edges for welding, and cleaning up castings. Nos. 31XU09 and 31XU10 can accommodate large and uncommon-shaped parts. No. 31XU08 includes 3 quickly interchangeable grinding tables. No. 31XU11 has a triangular base to let you pivot the unit to the desired angle. No. 31XU12 opens to provide a flat grinding position. Vacuum motor extracts and collects metal dust.

Dake®—Advanced belt tracking includes a fixed, vented front wheel for grinding on the wheel radius. Pivots up and down for work height adjustments. Hinged top cover lets you grind large pieces using the entire length of the belt.

Fein—Modular expandable grinders provide rapid material removal and feature an adjustable base and belt tracking system; ideal for metal machining. Detachable chip collection allows easy clean up. Include stand, belt grinder, and 36 grit grinding belt.

JET®—Nos. 53ZC60 to 53ZC63 feature cast metal frame, integrated dust chute, and quick belt change. No. 3WRN4 features flat platen; ideal for grinding and refinishing cylindrical shapes. The serrated contact wheel can be used for removing heavy stock, cleaning a weld, or snagging a casting. Nos. 3WRR3 and 42W965 tilt 45° out and 20° in. They feature variable-position locks and head adjustment, plain and compound miters, adjustable cast-iron removable platen, and removable upper guard. Include miter gauge and stand. Nos. 42W958 and 42W959 pivot up and down; a hinged top cover lets you grind large pieces. Advanced belt tracking has fixed, vented front wheel.

Belt/Disc Grinders and Sanders

Dayton®—Grinders have adjustable belt for vertical and horizontal positioning. Include front-mounted On/Off switch and built-in dust collection ports. No. 6Y945 bench model is direct drive from motor to disc and belt. Includes miter gauge and dust collection port. Floor Models include a quick-release tension mechanism for fast, easy belt changes. Come with tilting table and miter gauge. No. 49G990 includes an open floor stand. Nos. 49G992 includes a fully enclosed stand.

JET®—No. 42W960 has a deluxe miter gauge that turns and locks for common angles, 45° both left and right. Abrasive belt unit works like a jigsaw, coping saw, and hand file while removing material and finishing. No. 42W970 has preset stops at 90° and 45° for vertical or horizontal use. Dual thumb-screw belt tracking locks. Floor model No. 3WRP6 has 2 tilting tables for mitering applications and quick release belt tension mechanism. Nos. 3WRR2, 42W962 and 42W963 have a belt that operates at any angle and conforms to curves, angles, or circular finishing and grinding operations. Plain and compound miters are obtained using standard aluminum miter gauge.

Powermatic®—Belt head has an indexing pin with stops at 0°, 45°, and 90°, and a head lock that allows use at any angle in between. Cast-iron table has miter gauge slots and positive stops. Integral dual dust port.

Surface Grinders

- Noncoolant fed
- 220V, 60 Hz
- 3-phase

All units include grinding wheel, auto lube system, wheel adapter/flange, wheel balancing arbor, work light, and diamond dresser.

Manual No. 446P01—One V and one flat way for longitudinal travel for high precision grinding. Provides accurate slot grinding by using saddle locking system. Wire rope movement with double-nut backlash eliminator. Spindle runout accuracy of 0.0001". Working surface is 6" x 18.3".

Automatic Nos. 446P09 to 446P14—Ensure accurate alignment of longitudinal and cross movement with one-piece T-base casting. Provides automatic crossfeed with intermittent and continuous mode.

Automatic Nos. 446P06 to 446P08—Constructed with two V longitudinal ways and two cross V ways, ensuring accurate alignment between working surfaces. Mechanical valve controls the motion of table, minimizing vibration when table reaches on end and reverses back.

Automatic Nos. 446P02, 446P03, and 446P04—Have double V ways for cross travel (one V and one flat for longitudinal travel), providing automatic table and cross feed. Saddle locking system provides accurate slot grinding. Hydraulic system with oil tank prevents table from vibrating. Working surface from 6" x 18.3" to 8" x 20". No. 446P04 has a touch screen NC downfeed control.

OD Grinders

- Distance between center: 27 -1/2"
- Infeed range: 0 to 10"
- Max. Grinding dia.: 10"
- Max. Load between centers: 180 lb.
- Spindle rpm: 10,000
- 3-phase, 220V, 60 Hz

Can grind up to 12" outside dia. And 24", 40", 60", and 80" length work. Equipped with manual operated wheelhead infeed, and hydraulic table feed. Electronic control workhead can be swivel by 90° for CCW and CW grinding operations. Table travels on cushion of oil with no metal-to-metal contact. Automatic lubrication system with dual oil cover, prevents coolant from entering into workhead.

Nos. 446P15 and 446P6 feature variable speed drive.

No. 446P17 wheelhead feed is manually-operated.

No. 466P18 has auto head infeed.

Sanders

Disc—Use for deburring, chamfering, grinding, and finishing large workpieces.

Oscillating Spindle—Features 1" oscillating action to reduce friction heat, built-in 2" dust port, and 4 nonskid rubber feet. Tilts to 45°.

Oscillating Belt—For edge, face, bevel, and contour applications. Oscillating feature reduces heat build-up. Quick-release lever and control dial help track and replace belts. Cast-iron table moves up or down.

Drum—Patented conveyor belt TRACKERS™ reduce the need for manual belt adjustments.

CNC Router Tables

No. 445L77 comes with software, tooling, and a dust shroud. Built to last with a cast-iron base, the metal router is fully assembled. Ideal for sign makers and molding companies. Upload designs using a USB drive, and move the spindle with the handheld controller. Features ball screw X and Y axis movement for accurate positioning, square slideways for clamping, 4 collets, 15 starter router profiles, air-cooled spindle, and 4 T-slotted clamps to hold material for clean cuts. Nos. 445L78 and 445L79 allow you to automatically change tooling in 8 seconds. Program profile switches right into your design to save time and maintain precision during production runs. Prebuilt tables come with software, air-cooled spindle, and servo motors. High-gantry allows you to see what it's doing. Utilize USB drive with computer-controlled precision. Preload up to 4 collets. Include dust shroud and fully welded steel frame.

Dust Collectors

Not suitable for aluminum or other reactive dust, or for hot metal dust.

Single-Stage Portable—Dayton 115/230V units include PVC inlet hose and clamps. No. 3AA30 has a pick-up nozzle. Nos. 1RWB3 and 3AA28 have bag support assembly and built-in wheels. JET units include quick-connect collection bags and 4 casters. No. 42W940 features Vortex Cone™ to improve chip separation and prevent filter from clogging. Powermatic unit has efficient canister filter and triple 4" dust ports. TurboCone™ feature improves chip separation and prevents filter clogging.

2-Stage Portable—Include 5-ft. wire-reinforced PVC inlet hose and clamps, and 5-micron dust collection bag. Drum not included.

2-Stage Central—Conical blower housing induces a cyclone to effectively separate heavy and light particles; heavier particles drop into the drum and lighter particles are captured in the dust filter bag. Include fiberglass drum lid with hose and clamps, 5 micron dust collection bag, 230V motor starter, and all hardware required for assembly.

5-HP models support 1 drum and 1 dust bag; larger models support 2 drums and 2 dust bags. Drum not included.

Dust Collector for Metal—Uses Replacement Filters No. 42W951, sold below.

Ferndale safety WESTWARD

Safety Shields and Enclosures

Westward® Safety Shields—Feature quick cam action and 360° swivel locking shield.

Ferndale—No. 45HE37 is for milling machines and has 3 interlocking safety switches. Fitted to an articulated arm, balanced, and kept in position by a gas spring`with steel pipe and polycarbonate hood. No. 45HE42 is for grinders and includes clutch and easy-to-fit swiveling mounting bracket. Designed with aluminum frame and 130 x 130mm poly-carbonate screen. No. 45HE60 is a polycarbonate safety screen with lathe safety guard that can be tensioned to stay mid-way up. For use with chuck size up to 11" dia.

Sanding Belt Selection Guide

	Size Range	Application
File Belts	⅛ to 1" W, 12 to 30" L	Light weld removal and blending, shape and contour sanding, surface preparation prior to coating and plating, removing cutting tool marks from molds and dies, general clean-up and finishing
Portable Belts	3 to 4" W, 15½ to 24" L	Grinding and finishing all metals, blending welds, sanding and finishing wood, glass seaming, and polishing
	1 to 10" W, 36 to 132" L	Benchstand and backstand belts, grinding and deburring of all metals, heavy stock removal, blending, dimensioning and shaping, polishing

GRIT SELECTION GUIDE

Grit Size	Application
36 to 50	Stock Removal
60 to 100	Intermediate
120 to 320	Finishing

GRAIN SELECTION GUIDE

Abrasive Grain	Application
Ceramic - High Performance	High cut rate and long life on stainless, aluminum and other hard-to-grind metals
Zirconia Alumina - Heavy-Duty	High rate of stock removal and long life in demanding applications
Aluminum Oxide - General Purpose	General purpose metalworking applications

TROUBLESHOOTING GUIDE

Problem	Correction
Loading	Decrease infeed pressure or belt spread
Shedding	Reduce applied pressure Use less aggressive contact wheel Dress contact wheel if worn or damaged Use entire surface of belt
Belt Breakage	Reduce belt tension Use less aggressive contact wheel Check tracking mechanism for belts tracking erratically

More sizes and styles available online; for our complete selection go to grainger.com/sandingbelts

Choose the Right Abrasive for Your Application

General Purpose—The most affordable option uses Aluminum Oxide grit.

Heavy Duty—Zirconia grit provides a faster cut rate and longer life compared to Aluminum Oxide. An excellent combination of quality and price.

High Performance—Ceramic grit provides the best combination of service life and cut rate, for consistent performance over the entire product life. Your best choice for production applications.

Abrasive Cloth Roll Kit

Kit comes with 24-ft. L premium aluminum oxide abrasive sheets in 5 different grits; cut or tear off to the length that you need to help eliminate waste. The strong bonding system allows the sheets to be torn and rolled without shelling. An excellent choice for all your utility sanding and general maintenance work, including blending, finishing, and cleaning applications.

NORTON SAINT-GOBAIN

Open-Mesh Abrasive Rolls and Sheets

In applications where life and load resistance are the most-important factors, the open mesh screen on these silicon carbide sheets resists loading for fast, easy, and efficient sanding. Use for sanding plastic piping prior to gluing; preparing copper pipe and fittings prior to soldering; and sanding softer materials where loading is a problem, such as plaster, wood, drywall, brass, etc.

Diamond Hand Pads

NORTON SAINT-GOBAIN

Color-coded hand pads combine the durability and aggressiveness of diamond on a high-strength, flexible backing. Single-sided; conform to shapes and contours. Well-suited for quick finishing of ceramic tile to get a smooth edge before grouting. Can be used on many other surfaces to smooth edge chips, reface edges, or polish dies and molds. No. 1RDJ5 is an assortment that contains 1 of each type of pad.

Abrasive Sponges

NORTON SAINT-GOBAIN 3M

Durable coated foam lasts up to 5 times longer than sandpaper and resists tearing. Can be used wet or dry, and can be washed and reused multiple times.

General Purpose—Small, flexible sponges are coated on 2 sides and can be used on most materials. Silicon carbide abrasive.

Sealer Sanding—Designed for hand sanding primers and sealers between coats on furniture and cabinets. Premium silicon carbide abrasive. Coated on 2 sides.

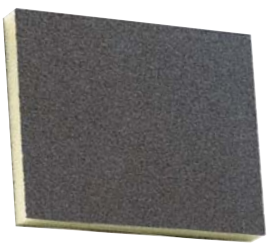
Profile—Designed for flat surfaces and corners on metal, wood, plastic, or paint. Aluminum oxide abrasive. Coated on 3 sides.

Small Area—The ultra sharp aluminum oxide grain offers faster cut and longer life for small area paint and drywall repair. Coated on 2 sides.

Dual-Angle and Angled—Extra-firm sponges are coated with aluminum oxide abrasive on 4 sides for sanding inside corners and crevices of drywall compound.

Contour—Thin, flexible sponges are designed for small diameter objects with contours such as ceramics, spindles, turnings, and railings. Aluminum oxide abrasive. Coated on 1 side.

Soft Touch—Superior flexibility for hand sanding or finishing flat, curved, contoured, and hard-to-reach areas. Aluminum oxide abrasive. Coated on 1 side.



Corner Drywall—2 sides have aluminum oxide abrasive, providing dual sanding action for near-perfect inside corners on drywall. Extra-firm sponges are designed for sanding drywall corners, but can also be used on a variety of other materials.

Softback—Coated on one side with an aluminum oxide grit that is excellent for automotive applications, this flexible sponge is effective for hard-to-reach areas like headlight openings and door jambs. The soft foam backing allows comfortable hand sanding.

Foam Sanding Pads

NORTON SAINT-GOBAIN

- A275 aluminum oxide grain with No-Fil® coating
- 4½"W x 82'L roll
- 178 (5½"L) sheets per roll

Water-resistant sheets are excellent for fine sanding water-based primers, topcoats, wood, metal and composite, especially on rounded edges, contours, and curves. Can be used moist to provide a uniform finish that minimizes scratching.

Norton H875	For soft material applications, fiberglass, and composites.	E-weight, paper	Zirconia Alumina
Norton Multi-Air® Cyclonic™	Provide maximum dust extraction for virtually dust-free sanding. Flat, laser-cut holes maximize cut rate and disc life.	Fiber-reinforced latex/paper	Ceramic Alumina
ARC Abrasives Inc® PREDATOR®	Premium blend of proprietary grains and grinding aid for high performance with a fast cut and long life. Ideal for mild steel and carbon steel.	Y-weight, cloth	Ceramic
CUBITRON™ II	Precision shaped ceramic grain for faster cuts and long life. Ideal for stock removal on a wide variety of substrates.	C-weight, paper	Ceramic

PSA Paper Disc Rolls

NORTON SAINT-GOBAIN

Pressure Sensitive Adhesive (PSA) backing enables quick disc changes. Stearate coating reduces disc loading. For use on random orbital and rotary sanders. Use for all-purpose dry sanding and finishing applications. Use with PSA back-up pads, sold separately; search for "PSA Back Up Pads" on Grainger.com®.

Hook-and-Loop Sanding Discs

Hook-and-loop backing makes discs reusable and enables quick disc changes. Stearate coating reduces disc loading. Designed for use on random orbital and rotary sanders. Use for preparing primed and painted surfaces for finishing; stripping primer and paint; sanding plastic, fiberglass, and bare wood; light weld blending and deburring; and finishing all types of metal. Use with hook-and-loop back-up pads, sold separately; search for "Hook-and-Loop Back Up Pads" on Grainger.com®.

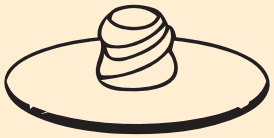
PSA Cloth Discs



For maintenance and repair applications, from medium grinding to light deburring and finishing. Pressure-sensitive adhesive (PSA) offers fast, convenient disc mounting. Discs are made without center holes for full-face usage.

8" discs and smaller are designed for use on orbital sanders or vertical shaft grinders and must be used with PSA back-up pads, sold separately; search for "PSA Back-Up Pads" on Grainger.com®. Discs 9" and larger are designed for use on stationary disc sanders.

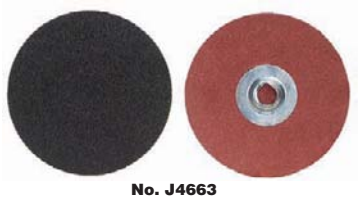
General Purpose Quick-Change Cloth Discs

- **Aluminum oxide abrasive**

Quick-change attachment system helps minimize downtime and improve productivity.

Note: More sizes and styles are available; to see Grainger's full assortment of quick-change discs, go to grainger.com/quickchangediscs

Norton Neon R766—Discs feature Y-weight polyester cloth backing and are excellent for stock removal, leveling, and blending applications on both contoured and flat metal surfaces.



Norton Metalite® R228—X-weight cloth backing. Use for general purpose applications.

Merit—For general use, including blending light welds, breaking edges, and removing parting lines and machine marks. Abrasive surface is laminated to a tough backing for exceptional durability.

3M™ 361F—For deburring, blending, leveling, and finishing all types of materials. Lock securely and unlock easily with just a half twist. Resin bonded for heat resistance. Heavy-duty cloth backing.

ARC Abrasives, Inc® A0 Series—Y-weight backing. Use for general purpose grinding.

High Performance Quick-Change Discs

- Ceramic abrasive

Note: More sizes and styles are available; to see Grainger's full assortment of quick change discs, go to grainger.com/quickchangediscs.

3M™ 987C—Precision-shaped ceramic grain for fast cuts with less pressure. Grinding aid minimizes temperature for heat-sensitive alloys. Use on virtually all metals; ideal for stainless steel and nickel alloys. Fiber backing.

3M™ Cubitron™ II 947A—The precision-shaped coated ceramic grain is self-sharpening, for consistent, long-lasting performance that resists loading. Excellent for deburring, blending, cleaning, and finishing applications. X-weight poly-cotton backing.

3M™ Cubitron™ II 984F—A durable edge backing provides extended edge retention. Precision-shaped ceramic grain is self-sharpening and has a grinding aid for cooler running, wet or dry. YF-weight polyester cloth backing.

ARC Abrasives, Inc.® Predator®—Premium blend of proprietary grains, plus a grinding aid, with heavy poly-ester backing. Ideal for grinding mild steel and carbon steel. Fast cut rate and long life. Y-weight cloth backing.

Norton R983—Ceramic grain with "supersize" grinding aid lubricant resists dulling, providing outstanding wear resistance and long-lasting cutting performance. Cloth backing.

Norton SG Blaze® R980P—Improved ceramic aluminum oxide grain provides cool cut with fast cut rate. Durable polyester Y-weight backing. Treated with grinding aid for better part finish and integrity. Y-weight cloth backing.

Surface Blending Discs

Use on right angle or vertical shaft grinders to remove surface defects, flashing, rust and corrosion, paint, or scale. Also good for cleaning molds, blending mill and tool marks, and imparting finishes.

Merit and Scotch-Brite™—Aluminum oxide grit is excellent for finishing, cleaning, and light deburring; great for general purpose surface conditioning.

Norton Rapid Prep—Provide a smear-free finish, even on high nickel-content alloys; excellent for finishing and blending. Proprietary coating helps extend disc life.

Norton Vortex Rapid Prep—Proprietary aluminum oxide grain and coating help cut process times in half, and wear up to 4x longer. Provide a smear-free finish and will not load on aluminum and soft metals.

Scotch-Brite™ AL—Non-woven discs have open web construction for outstanding blending and finishing capabilities, and excellent loading resistance; last up to twice as long as standard discs.

Quick-Change Disc Back-Up Pads

Designed for use on vertical shaft grinders to provide the required support and locking mechanism. Use TS pads with Norton Speed-Lok® TS and Merit® Type 2, Standard Quick-Change™ discs. Use TR pads with Norton Speed-Lok TR, 3M® Roloc™, and Merit Type 3 discs. Medium density can be used for a variety of grinding and finishing applications. Use hard density for high-pressure applications and jobs that require heavy metal removal.

Roloc™ Fiber Discs

- Ceramic abrasive
- Pkg. qty. 10

Precision-shaped ceramic grain produces a faster cut and runs cooler for longer service life, increased production, and lower cost-per grind.

782C—An outstanding choice for grinding and cutting carbon steel.

787C—Engineered for use on stainless steel and non-ferrous metals, such as aluminum and titanium.

Norton F980 Blaze—Contain a grinding aid to help provide a better finish and longer life on stainless steel and alloyed metals. Heavy fiber backing. For material removal, weld grinding and blending, light deburring, and finishing.

Norton F981 Red Heat—The coated grain provides faster cutitng, longer life, and a better finish on mild carbon steel, stainless steel, and hard-to-grind alloys.

3M™ 987C—Stand up to robotic weld grinding, and other heavy-duty applications; integrated grinding aid helps extended disc life. Excellent on cobalt and nickel alloys, high-nickel alloy, stainless steel, titanium, and titanium/zirconium substrates.**ARC® PREDATOR®—**Ideal for grinding mild steel and carbon steel. Performance-coated discs are designed for aluminum, soft metals, and alloys. Coating resists loading for high cut rate and performance.

Flap Disc Specifications

Type 27 Flat

Type 29 Conical

WHY CHOOSE A FLAP DISC?	
Flap Discs can replace both grinding wheels and fiber discs. The same flap disc can be used for applications ranging from stock removal to blending.	
Flap Discs vs. Grinding Wheels	**Flap Discs vs. Fiber Discs**
Faster stock removal	Longer life, reduced abrasive cost
Smoother finish with no gouging	Fewer disc changes for reduced cost
Cooler cutting, less glazing	More consistent finish
Lightweight and easier to control	No back-up pad required
Less vibration for reduced operator fatigue	Easier storage with no curling
Reduced noise	Reduced loading
	Grit is coarser size

FLAP DISC SHAPES	
Type 27 Flat	**Type 29 Conical**
Grind at flatter angles 0° to 15°	Grind at steeper angles 15° to 25°
Used primarily on flat surfaces	Have angled flaps and may be used on both contoured and edge work
Best choice for blending and smooth finishing	Angle provides greater surface contact for stock removal on flat surfaces
	Best choice when speed and stock removal are primary considerations

GRAIN SELECTION	
Abrasive Grain Type	**Application**
Ceramic - High Performance	High cut rate and long life on stainless, aluminum and other hard-to-grind materials
Zirconia Alumina - Heavy Duty	High rate of stock removal and long life in demanding applications
Aluminum Oxide - General Purpose	General purpose metalworking applications

GRIT GUIDE							
Coarser for Grinding						**Finer for Finishing**	
24	**36**	**40**	**50**	**60**	**80**	**100**	**120**
Stock Removal							
	Edge Chamfering/Beveling						
		Weld Blending					
			Deburring/Deflashing				
				Rust Removal/Blending			
					Cleaning and Finishing		

BACKING PLATE MATERIALS	
Flap discs are a combination of abrasive flaps adhered to a rigid backing plate. The backing plate provides stability during operation.	
Backing Material	**Advantages**
Fiberglass	High strength and lightweight; helps to absorb vibration
Plastic	Offers some conformability and is trimmable
Aluminum	Rigid support for maximum aggression; recyclable
Composite	Trimmable, non-marking; allows access at hard-to-reach angles
Phenolic	Prevents backing from scratching the workpiece

No. 493Z12

DEWALT

GA GRAINGER APPROVED

NORTON SAINT-GOBAIN

General Purpose Flap Discs

DEWALT® SG 40

Coated ceramic abrasive provides long life and fast material removal on ferrous metals. Plastic backing.

NEON™ HIGH DENSITY

Larger flaps improve conformity on uneven or contoured surfaces. Fiberglass backing.

NEON™

Alternating aluminum oxide and zirconia alumina flaps. Good for aluminum, brass, bronze, stainless steel, carbon steel, and titanium. Quick-trim flexible plastic backing plate wears away as the disc grinds.

Blaze® Type 3

Bluefire™ Type 2

NORTON SAINT-GOBAIN

Type 2 (TS) and Type 3 (TR) Flap Discs

Mini flap discs offer simultaneous grinding and finishing, to help save you time, labor, and money. High-strength lightweight plastic backing absorbs vibration, while the durable, Y-weight polyester flaps wear away evenly for aggressive cutting and good blending capabilities. For back up pads, see page 2374.

BLAZE®

The Blaze disc can be used on tough materials, such as stainless steel, titanium, and super alloys, and provide up to 200% longer service life. An excellent choice for aerospace, surgical/medical/distilling equipment, food processing/equipment machinery, pressure vessels, and ship containers. A "supersize" grinding aid provides cooler cutting, and a noticeably faster cutting rate.

BLUEFIRE™

The Bluefire discs feature a zirconia alumina abrasive that provides aggressive cutting and up to 30% longer life on mild carbon steel and welds. The semi-open coat also retards loading on aluminum. An excellent choice for farm equipment, propane tanks, civil/construction/military equipment, and plate steel/structural steel.

WEILER NORTON SAINT-GOBAIN GA GRAINGER APPROVED

Heavy-Duty Flap Discs

WEILER BIG CAT HIGH DENSITY

Zirconia alumina abrasive with phenolic backing. Enhanced conformability for curved and irregular surfaces. Contain 40% more flaps.

NORTON BLUEFIRE™

Zirconia alumina abrasive. Trimmable flexible blue plastic backing plate wears away with grinding to allow full use of the disc and conforms to uneven surfaces.

WEILER BOBCAT MINI

Zirconium grain with plastic backing. Ideal for tight spaces.

GA

Zirconia alumina grain with cloth-backing. Discs provide aggressive cutting and offer up to 40% longer life than standard flap discs.

WEILER TIGER PAW™

100% zirconia alumina discs are ideal for demanding applications such as edge grinding. Phenolic backing. High density discs contain 40% more flaps.

WEILER TIGER®

Wheels feature a high-performance, high-density zirconia alumina abrasive for outstanding grinding, and have 35% to 40% more flaps for longer wear. Available with aluminum, phenolic, or trimmable backing.

Cubitron II
No. H7327

Redheat®
No. H5957

3M NORTON SAINT-GOBAIN WEILER ARC ABRASIVES INC

High Performance Flap Discs

3M™ Cubitron™ II 967A—Precision ceramic grain for use on carbon and stainless steel. Cloth backing. Type 27 Giant flap discs are thicker and contain more abrasive material, to provide longer wear and longer service life.

Redheat®—Ceramic/zirconia alumina abrasive. Trimmable, flexible plastic backing plate wears away as flap disc grinds and is highly conformable.

Saber Tooth™—Ceramic/alumina discs with self-sharpening grain. Phenolic backing. For use with heat-sensitive materials, aluminum, stainless steel, inconel, and titanium. High Density disc contains 40% more flaps. Trimmable Back disc has nonmarking composite backing that will not damage work piece.

SG Blaze®—Ceramic alumina grain lasts longer when grinding stainless steel, cobalt, chrome, Inconel®, titanium, and other hard-to-grind metals. Trimmable, flexible plastic back plate wears away as flap disc grinds.

Tiger® X—Features 3X industry exclusive technology that combines an advanced grain anchoring system, dual flap design, and ceramic/zirconium cloth backing for fast grinding and long life.

ARC® PREDATOR®—Discs use a proprietary blend ceramic abrasive grain that is ideal for grinding mild and carbon steel. AP flap discs provide increased flap exposure for faster stock removal. Hard Edge flap discs are engineered with a compressed outer diameter for heavier and more aggressive use, similar to Type 29. Performance Coating improves cut and life by reducing loading and heat on soft metal applications.

Flap Wheels with Arbor Hole

For applications with metal, plastic, wood, fiberglass, and rubber. Use with portable drills, bench grinders, and air tools.

Merit—Aluminum oxide abrasive with standard cloth backing.

Merit Grind-O-Flex—High-performance aluminum oxide abrasive with upgraded cloth backing for longer life and higher productivity.

Norton NEON™—Premium aluminum oxide abrasive and heavy cotton backing is an economical choice for light and moderately demanding applications.

NORTON SAINT-GOBAIN | DEWALT | MERIT we know abrasives | GA GRAINGER APPROVED

Mounted Flap Wheels

- Available with ¼" x 1¼" steel shank or ¼-20 threaded shank

Designed for use with die grinders, portable drills, and air tools. The flaps wear away, continually exposing fresh abrasive and providing uniform finish and consistent cutting action. Flap wheels can conform to most shapes. Use for metal fabricating, blending welds, deburring, cleaning, and finishing.

Norton NEON™—An economical choice for cutting hard-to-grind materials such as aluminum, brass, stainless steel, carbon steel, and titanium. Coated aluminum oxide abrasive and heavy cotton backing. Shank is integrally mounted into the wheel.

DeWalt®—An excellent choice for surface finishing and preparation, and edge blending and chamfering applications on ferrous metals and stainless steel. High-performance aluminum oxide grit and premium cloth backing.

Merit—Shape to fit any desired contour, even a compound radius. Hardened steel mandrel permanently mounted in epoxy core.

GA—Premium aluminum oxide grain is specially treated for high performance. Resin over resin for optimum cutting action and wear out pattern. Specially designed cloth backing with synthetic processing for a good combination of flexibility and sturdiness.

Alo Resin Bond Bore Polishers

- As flaps wear, fresh abrasive is constantly exposed
- Finish a range of interior diameter sizes without changing polisher

Self-centering polishers apply equal pressure to full wall of interior diameter. Spring-action design provides fast cleaning, deburring, and polishing of interior diameter of cylinders, deep tubes, and hydraulic fittings. Flaps adjust automatically to interior diameter, polishing the entire surface area with each pass. Equal spacing between packs of abrasive flaps eliminates heat buildup.

Spiral Bands

Rubber Drum

MERIT
we know abrasives

Spiral Bands and Expanding Rubber Drums

Fast-cutting spiral bands remove tough material. Achieve close tolerances when finishing curved, contoured, or hard-to-reach areas. Maximum rpm is determined by rpm rating of expanding rubber drum. Use rubber drums to provide backing support for spiral bands. Steel shank enables use of straight shaft and right-angle grinders.

Drum Sanding Kit includes 6 sizes of drums: ½" x ½", ¾" x 1", 1" x 1", 1½" x 1½", 2" x 2½", and 3" x 3", with 1 medium 80 grit and 1 fine 120 grit aluminum oxide abrasive sleeve to fit each drum size.

3" Dia. Flap Brushes and Wheels

Scotch-Brite™ brushes remove handling marks and surface imperfections and are ideal for decorative finishes and light deburring. Combi-S Wheels provide an aggressive cut and fine finish. Made of alternating flaps of aluminum oxide-coated abrasives and Scotch-Brite web.

3M

Radial Bristle Brushes with Adapters

- Ceramic aluminum oxide abrasive
- Max. RPM: 6,000

Scotch-Brite™ brushes yield faster cut rates; flexible, abrasive-filled bristles provide fresh abrasive to the work surface for uniform finishes and conform to workpiece surface without damaging base material. Excellent replacements for wire brushes. Use on bench motors for general purpose cleaning applications. Include ⅜", ½", ⅝", and ¾" adapters.

Brush Type	Dia.	Mounting Type	Mounting Size	Grit	Color	Item No.

Coating Removal Discs

4½" Disc

- Silicon carbide abrasive
- Extra-coarse grade

Heavy-duty Scotch-Brite™ discs are made for right-angle tools. The semiopen web construction and nonloading design are ideal for removing rust and coatings from metal surfaces. Hook-and-loop backing easily attaches to 3M™ disc pad holders, see page 2374.

NORTON SAINT-GOBAIN

Sanding Discs and Depressed Center Wheels

An open web of synthetic fibers and abrasive bond with smear-resistant resin help these wheels provide quick cleaning and conditioning without loading; easily clean uneven surfaces and difficult part profiles. Use to remove surface rust and residue, corrosion, light weld splatter, dirt, mill scale, paint, and epoxy. Prepare surfaces prior to welding or coating application. Clean and condition after welding.

Rapid Prep disc can be used in place of, or in sequence with fiber and flap discs to clean, polish, and finish. Rapid Blend discs and wheels have fine grain particles for cleaning, polishing, and final finishing. Rapid Strip discs and wheels have a coarse abrasive for quick cleaning. Blaze Rapid Strip wheels can strip coatings and finish with the same disc.

Grinding and Cut-Off Wheels Reference Guide

TYPE 1	TYPE 27
Straight wheels designed for cut-off applications	Essentially straight wheels that have a "depressed center/raised hub". Different types of fiberglass reinforcement mesh give the product stability for use on the periphery, on the face, or a combination of the two.

WHEEL TYPE	THICKNESS	APPLICATION	90° Angle	15° to 30° Angle	15° Angle
TYPE 1	0.035", 0.040", 0.045", 1/16"	Where fast cutting and low kerf loss are desired	X		
	0.125"	For tough cutting and notching applications where stability is important	X		
TYPE 27	0.40", 0.45" 1/16"	Cutting only, where fast cutting and low kerf loss are desired	X		
	0.90", 0.125", 3/32"	For tough cutting and notching applications where stability is important; cutting and cleaning burr-free narrow root pass welds	X		
	1/8"	For multiple applications ranging from cutting-off and notching to light-duty side grinding	X	X	
	1/4"	For heavy-duty to light grinding on the bottom/face of the wheel		X	

GENERAL PURPOSE - SILICON CARBIDE

DEWALT
C24R - Silicon carbide grain for long wheel life. For concrete, cast iron, ductile iron, and other masonry materials.
C60T - Premium silicon carbide for aggressive cutting action. Heavy duty for concrete and other masonry materials. Fast burr-free cutting.

NORTON
Norton Masonry/Masonry RightCut - Silicon carbide for masonry applications.

HEAVY-DUTY - ZIRCONIA

DEWALT
Extended Performance Z24R - Premium tough zirconia grain for extended life and material removal. Heavy duty for ferrous metals and stainless steel.
Extended Performance Z60T - Specially treated grain combination for aggressive cutting action. Extended performance, fast, burr-free cutting in all types of ferrous metals and stainless steel.

NORTON
BlueFire - Mix of zirconia and premium aluminum oxide grain. For use with stainless steel, carbon steel, alloys, and gray iron.
BlueFire Fast Cut/INOX - Contains <.1% iron, sulfur, or chlorine for contaminant free grinding.
BlueFire Foundry/Foundry HD - Zirconia alumina/silicon carbide abrasive blend and an exceptionally strong reinforcement structure. Ideal choice for aggressive, foundry applications.
BlueFire Right Cut - Longer life and faster cut rate. Less pressure required for first cut. For cutting only.

UNITED ABRASIVES – SAIT
The Ultimate Combo™ Z-tech™ - High performance, tough zirconium grain, Cutting, notching, deburring, and light grinding for the toughest applications. For use with stainless steel and ferrous metals.
Z-Tech™ - Special zirconium grain formula. Fast, non-binding cutting. For use with ferrous metals, stainless steel, and high tensile alloys.

HIGH PERFORMANCE - CERAMIC AND CERAMIC BLEND

3M
Cubitron™II - 3M precision shaped grain for ultra fast cut and long life. Cuts with less pressure. Specially formulated for stainless and mild steel.
High Performance - A blend of 3M precision shaped ceramic grain and conventional abrasive provides fast cut and long life. Specially formulated for stainless and mild steel.
Silver - 3M precision shaped grain cuts extremely quickly through stainless steel and carbon steel pipes, tube, flat sheets, and more.

NORTON
NorZon Plus - Combination of Norton SG ceramic alumina and Norzon zirconia alumina with advanced bond system. Lowest total grinding cost; highest productivity. Offer the best option when the best combination of life, cut rate, and lowest heat generation is a primary concern.
NorZon Plus Foundry - Designed to withstand the most aggressive foundry applications.
NorZon Plus Long Life - Best option when longest possible life is primary concern, rough grinding conditions require wheel durability, using high cycle, high horsepower grinders and low labor cost are key.
NorZon Plus RightCut - Noticeably longer life and faster cut rate. Less pressure required. For cutting only.

UNITED ABRASIVES – SAIT
Saitech Ultimate Performance™ - High performance, ceramic aluminum oxide grain, Very uniform, high density grain structure is extremely durable and self sharpening for long life and cooler cut, Combines fast cutting with extremely long life for tough cutting applications. For ferrous metals and stainless steel. Ideal for foundry applications (gates, risers).
Saitech™ - High performance, ceramic aluminum oxide grain. Extremely fast stock removal on hard metals with minimal pressure.

GENERAL PURPOSE - ALUMINUM OXIDE

DEWALT
A24R - Aluminum oxide grain for long life and high material removal. Heavy duty for ferrous metals.
A30N- Aluminum oxide grain combination for long wheel life. Fast material removal without loading. For use with aluminum and other non-ferrous materials.
A30S - Aluminum oxide grain for long life and high material removal. Free of iron, sulfur, and chlorine for contaminant free grinding and cutting. Ideal for use in nuclear and food applications.
A36T - Heavy duty cutting in all types of ferrous metal and stainless steel. Fast aggressive cutting in tough applications.
A60S - Proprietary aluminum oxide grain combination for aggressive cutting action. Free of iron, sulfur, and chlorine for contaminant free cutting. Used for cutting stainless steel and other high strength alloys. Ideal in nuclear and food applications.
A60T - Heavy duty cutting in all types of ferrous metal and stainless steel. Clean smooth cutting and long wheel life.
Metal AO - Softer formulation for fast cutting. Quickly cuts rebar, pipe, sheet metal, structural steel and stainless steel.
Mini Hub HP™ - Allows for more cuts per wheel vs. starndard hub design. Fast tool-free wheel changes. Use for a wide range of metal cutting applications.

NORTON
Gemini - Good choice for steel and ferrous metals as well as specialty applications in aluminum and foundries. Quality aluminum oxide provides consistent performance.
Gemini 1-2-3 - For cutting, notching, and grinding.
Gemini Aluminum - Grind aluminum and softer metals without loading. Contains no wax or rubber fillers.
Gemini Fast Cut - Fastest cutting option when speed of completion is the primary concern.
Gemini Flexible - Unique formulation for better blending, finishing and polishing of stainless steel, structural steel, cast iron welds and burrs. Meets nuclear industry standards.
Gemini Free Cut - Use a more flexible binder than the Long Life wheel, for faster cutting on low-horsepower machines.
Gemini Long Life - Longest lasting when the longest possible wheel life is the primary concern.
Gemini RightCut - Precise cutting; more stability and a narrower pass. Requires less pressure, providing increased operator comfort.
Gemini RightCut Aluminum - Specially formulated for aluminum applications.
Gemini Stainless Steel - For contaminant free grinding.
Gemini XXL/XXL Pipefitter - Best on hard grade carbon steel applications, weld repairs, flashing, and any job that requires quick turn around.
Norton Metal/Metal RightCut - Aluminum for steel/ferrous metal applications.

UNITED ABRASIVES – SAIT
A24N - Fast grinding, aluminum oxide grain, soft bond for fast stock removal. For ferrous metals and low grade stainless steel.
A24R - Long life, aluminum oxide grain, general purpose. For ferrous metals.
A24T - Aluminum oxide grain, hard bond designed for edge and bevel grinding and other applications where a harder wheel is preferred. Longer life for fewer wheel changes. For ferrous metals.
A36T - Fast cutting, aluminum oxide grain. Hard bond for aggressive cutting on rough applications. For ferrous metals and stainless steel.
A46N - Aluminum oxide grain, soft bond for aggressive cutting without loading. For use with nonferrous metals and aluminum.
A60S - Special aluminum oxide grain, hard bond for extremely long life. Fast, burr-free cutting for ferrous metals.
A60T - Aluminum oxide grain, hard bond for smooth cutting. Burr-free cutting for ferrous metals and stainless steel. For use in nuclear, aerospace, automotive, foundry industries, and plant maintenance.
Challenger 3™ - Semi-Flexible, grind and blend welds in one step. Open pattern on wheel for cool grinding and blending. For metals, stainless steel, and aluminum. Contaminant Free - Safe for use in the nuclear industry.
SAIT.M.X.™ - Special bond for cutting sheet metal and other thin gauge metals. Fast, burr-free cutting for stainless steel.
The Ultimate Combo™ A60S - General purpose, aluminum oxide grain. Provides consistent performance with long life for cutting, notching, deburring, and light grinding. For use with ferrous metals.
The Ultimate Cut™ - Cutting a wide range of stainless thin and thick gauge, flat stock, bar stock, square tubing, etc. Exceptional cutting performance on metal and aluminum.
XA24Q - Contaminant free. Specially formulated for nuclear and food processing plants. Free of iron, chlorine and sulfur compounds (Fe + Cl + S <0.1%). For use with stainless steel and other high tensile alloys and ferrous metals.
XA46R - Contaminant free. Specially formulated for nuclear and food processing plants. Free of iron, chlorine and sulfur compounds (Fe + Cl + S < 0.1%). For use with stainless steel and other high tensile alloys.

NORTON
SAINT-GOBAIN

Type 1 Toolroom Cut-Off Wheels

Designed for use on fixed machinery and preengineered for maximum versatility in toolroom cutting applications. Excellent for cutting off drill bits, steel bars, and tubing; salvaging tools; and slotting workpieces.

NOTE: Refer to Reference Guide for more detailed information on wheel types.

Cut-Off Wheel Adapters

GA GRAINGER APPROVED

Use with cut-off wheels listed on this page and page 737, 2384 and wire brushes on pages 2394 and 2395.

Note: Operate according to ANSI and OSHA guidelines and do not exceed maximum rpm noted on wheel being used.

Screw-Type Wheel Mandrel Adapters— Machined from stressproof steel. Screw head is slotted for fast, easy change. Plated finish. No. 1F540 comes with screws to mount either ¼" or ⅜" holes.

Nut-Type Wheel Arbor Adapters—Use to mount all types of wheels (cut-offs, cloth buffs, wire wheels, etc.). Include arbor, hex nut, and a pair of machined steel washers. Plated finish.

Fits Hole (in.)	Max. Wheel Width (in.)	Shank Dia. (in.)	Washer O.D. (in.)	L (in.)	Item No.

XL-WL Deburring Wheel

Multi-Finishing Wheel

Cut-and-Polish Wheel

3M

MERIT abrasives

Deburring/Finishing Wheels

XL-WL Deburring Wheels—Long-lasting Scotch-Brite™ wheels clean and deburr metal surfaces and threads while eliminating the danger of loose, flying wires. Wheels polish and finish metals or composites. Fit standard motor shaft sizes (½" to 1").

Multi-Finishing Wheels—Produce uniform grain finishes on stainless steel and other metals.

Cut-and-Polish Wheel—Heavy-duty wheel for aggressive blending and finishing. Accessories (available separately) allow fit to standard motor shaft sizes (½" to 1").

Deburring and Finishing Wheels—Non-woven spindle-mounted disc wheels are excellent for deburring, blending, and finishing. Conformable construction leaves a smooth, polished finish, even on oddly shaped pieces and surfaces. ¼" steel mandrel.

Unitized Wheels

- ¼" arbor hole mounting
- Medium grade
- Precision-shaped ceramic grain abrasive

Ceramic grain wheels can be used for deburring and finishing in both OEM and maintenance applications. The long-wearing grain extends wheel life and produces minimal dust and debris, to reduce wear and wheel loading, and help improve efficiency.

Wheel Dressing—Dressing Sticks and Truing and Dressing Tools are designed to clean, shape, and open the face of tool room grinding tools, to help them run true.

To see our full selection, go to **grainger.com/wheeldressing**.

Grainger.com Category	Application
Dressing Sticks	Designed for offhand dressing (cleaning, shaping, or opening) the face of toolroom grinding wheels.
Diamond Truing and Dressing Tools	Designed to true (make a wheel round and run true) and dress (clean, shape, or open the wheel face) of toolroom grinding wheels.

Dressing Sticks

Truing Tool

Dressing Tool

Diamond and CBN Toolroom Grinding Wheels—Engineered to tackle your most-challenging applications, from grinding hardened steels and superalloys, to finishing materials such as glass, ceramics, and tough composites. They meet the stringent requirements of CNC cutting tool manufacturing and resharpening applications, including fluting, end fluting, gashing, and OD relief. Choose from a wide variety of forms, sizes, grades, and materials to fit your machines and meet your specific job requirements.

To see our full selection, go to **grainger.com/diamondcbngrinding**.

NORTON
SAINT-GOBAIN

Rough Portable Wheels, Cones, and Plugs

Designed for consistent, quality grinding performance in foundries, welding shops, fabrication facilities, steel mills, and shipyards. Typical uses include smoothing weld seams, cleaning castings, and preparing surfaces for plating or painting. Straight wheels, cones, and plugs are designed for use on horizontal/straight shaft grinders. Flaring cup wheels are designed for use on right angle portable cup grinders.

WHEEL SPECIFICATION	
ABRASIVE	**APPLICATION**
57A - Aluminum oxide	Good performance on steel, steel alloys, and iron
57AC - Aluminum oxide/Silicon carbide blend	Good performance on dirty, scale-covered steel parts
AZ - Zirconia alumina/Aluminum oxide blend	Better performance on steel, steel alloys, and iron
NZ - Zirconia alumina	Best performance on steel, steel alloys, and iron
37C - Silicon carbide	For masonry and nonsteel
BLUEFIRE - Ceramic/Zirconia	For steel, iron, and graphite foundry snagging jobs

- Use on die or in-line/straight shaft grinders
- Max. RPM based on ½" overhang

Quantum® Vitrified—Best for high-volume operation. Ceramic alumina abrasive.

Gemini® Vitrified—Aluminum oxide abrasive 38A in a vitrified bond.

Cotton Fiber—Ideal for blending and finishing parts without changing part geometry. Aluminum oxide abrasive.

Charger® Resin—Made of self-sharpening zirconia alumina abrasive.

NORTON SAINT-GOBAIN

Abrasive Sharpening Files and Stones

Crystolon—Fast-cutting silicon carbide abrasive.

Diamond—Diamond abrasive is nickel-bonded to solid steel.

Hard Arkansas—Natural novaculite abrasive produces a fine edge and polished finish.

India—Smooth-cutting aluminum oxide abrasive.

The Operational Advantages of Power Brushes

THEY DON'T REMOVE BASE MATERIAL

The impact action of the wire tips of a rotating brush behave in the same manner as the media in a blasting operation and they have the same ability to separate surface contaminants without damaging the substrate.

Its compliant nature makes it an excellent choice for removing burrs and blending sharp edges without changing overall part dimensions after sawing, cutting, grinding, and machining operations.

NON-LOADING

Unlike bonded, coated, and non-woven abrasive products, power brushes will not load when used on softer materials or when removing paint or similar coatings from a harder surface. Because a power brush consists of a collection of individual wire filaments, there is no place for debris to accumulate and prevent the sharp wire tips from striking the work.

SELF-SHARPENING

As a power brush is used, the wire tips will naturally tend to wear to a point due to contact with the working surface. It is possible to take advantage of this self-sharpening action by periodically switching the mounting position of wheel brushes to maintain their speed and effectiveness.

WEILER GA GRAINGER APPROVED

Arbor-Mount Grinder Wire Brushes

All brushes are made with high-tensile, heat-treated carbon steel wire, except where otherwise specified.

Crimped Wire Cup—Greater brushing flexibility for larger, flat surfaces and relatively fine finish.

Knot Wire Cup—For tight operations, corners and angle welds, curved surfaces, and pipe bevel cleaning. Double-row brush is for aggressive action in severe applications.

Twist Wire Wheel—For broader cleaning coverage, deburring, edge blending, and finishing. 3" wheels are used on straight grinders; 4" wheels are used on small angle grinders; and 6" wheels are used on bench and right angle grinders. Stainless steel brushes are recommended for aluminum, nonferrous alloyed metals, and stainless steel.

Knot Wire Wheel—Saucer-shaped radial wheels provide heavy-duty brushing and material removal, and still maintain some flexibility for cleaning filet welds and reaching into corners. Use with right angle grinders.

Stringer Bead Twist Wheel—Narrow brush face for stringer weld, piping, pipe grooves, and other hard-to-reach areas. Stainless steel brushes are recommended for aluminum, nonferrous alloyed metals, and stainless steel.

WEILER

Arbor-Mount Crimped Wire Wheels

For cleaning rust, scale, dirt, and paint; deburring; edge blending; roughening for adhesion; flash removal of rubber and plastic; finishing for appearance; and finish preparation prior to painting or plating.

Narrow Brush Face—Produces flexible brushing action; conforms to uneven surfaces or irregular shapes. 4" wheels are used on straight grinders.

Medium Brush Face—Greater fill density creates more aggressive brushing action.

Wide Brush Face—Heavy fill density creates minimal flexibility. Fast aggressive cutting covers more surface area in a single pass.

Polyflex® Encapsulated
No. 3A190

WEILER

Small-Diameter Wire Wheel Brushes

Use for burr removal in slots and narrow confined areas, rust removal, surface refinement and juncture blending, weld scale removal, and flash removal of rubber or plastic.

5-Pc. Utility

WEILER

Brush Assortment Kits

Utility—Starter kit for use on die grinders, air tools, and electric and pneumatic drills. Components fit on all ¼" and higher arbor size chucks. Ideal for deburring and smoothing metal surfaces.

Mini Grinder—Starter kit for 4½" and 5" mini right angle grinders. Fits all 5/8-11 threaded arbors. Use for deburring, deflashing, and removing rust, paint, and corrosion. Abrasive flap disc is used for grinding and finishing in one step.

Description	Includes	Mfr. Model	Item No.
3-Pc. Mini Grinder	Mfr. No.13131 4" Knotted Wheel with ⅝-11 Arbor, Mfr. No. 50519 4½" 60 Grit Flap Disc and Mfr. No. 13286 2¾" Knotted Cup with ⅝-11 Arbor	97417	**4KY54**
5-Pc. Utility	Mfr. No. 17615 3" Stem-Mounted Wire Wheel Brush, Mfr. No. 16973 3" Stainless Steel Brush, Mfr. No. 07724 ½" Dia. ¼" Shaft Arbor, Mfr. No. 14301 1¾" Stem-Mounted Cup, and Mfr. No. 10008 ¾" Crimped Wire End Brush	97418	**4KY53**

NORTON SAINT-GOBAIN

Wire Brushes

Crimped Wire Brushes offer high brushing flexibility for light- to medium-duty brushing on flat or irregular surfaces. Knotted Wire Brushes have a more-rigid construction for use on more-demanding cutting and cleaning applications.

Carbon Steel can be used on carbon steel, iron, and wood surfaces.

Stainless Steel can be used on aluminum, brass, copper, stainless steel and wood surfaces.

Abrasive Nylon can be used on most surfaces.

Cup Brushes—Use with a right-angle grinder to remove rust, paint, scale, and concrete. Especially good on large surfaces, corners, recesses, and in other hard-to-reach areas.

End Brushes—Use with CNC machines, robotic, die grinders, and drill presses to clean and deburr recessed areas or inside diameters of tubes and pipes. Can also be used for rubber and plastic flash removal, paint and rust removal, and mold and tool polishing.

Wire Wheel Brushes—Use with a variety of machines for tough, aggressive surface cleaning applications. Leave a rougher finish.

No. 416L88

No. 416M32

Crimped Wire Wheel

Cup Brushes

Knot Wire Wheel

WEILER ★ GA GRAINGER APPROVED

¼" Stem-Mounted Wheel and Cup Brushes

Crimped wire wheel brushes have great flexibility on uneven surfaces. Knot wire wheel brushes have a strong twist for longer life and aggressive rough finishing. Brushes contain high-carbon, heat-tempered steel wire for aggressive cutting action and maximum life. Special 3-D crimping means less wire breakage.

Stainless Steel—Recommended for stainless steel, aluminum, and nonferrous alloyed metals.

WEILER GA GRAINGER APPROVED

¼" Stem-Mounted End Brushes

For use in portable tools. Compact brushes are shaped for hard-to-reach areas. Use for carbon cleaning; I.D. pipe cleaning; die, mold, and tool cleaning and polishing; and rust and paint removal.

Circular Flared—Flare design accommodates the natural working angle for consistent finishing. Allows easy access to a broad range of surface angles and contours.

Crimped Wire—For light-duty brushing applications. Stainless steel brushes are recommended for stainless steel, aluminum, and nonferrous alloyed metals.

Knot Wire—High-tensile carbon or 302 stainless steel yields maximum cutting action. High RPM ratings meet or exceed industry standards.

WEILER

⅛" Stem-Mounted Miniature Brushes

Provide excellent accuracy where precision brushing is critical. Ideal for general cleaning, deburring, and blending surface junctures in electronics, instrumentation, and tool-and-die work.

Burrite Brush
No. 1PBD7

Double Spiral
No. 4F734

WEILER NORTON SAINT-GOBAIN

Power Tube Brushes

Brushes can be used with power tools for deburring, honing, thread chasing, and cleaning applications on blind and threaded holes. Burrite-type brushes use flat-side action. Use Double Spiral Brushes for heavier-duty applications.

Deburring Blade Material and Application Chart

BLADE MATERIALS

Ceramic—Use for deflashing plastic materials.

High Speed Steel—Excellent general purpose blade for use on most materials.

Cobalt (S)—The best choice for Stainless Steel.

Carbide (C)—Best for Hardened Steel and Cast Iron.

TiN Coated (P)—Significantly increases HSS blade Life.

APPLICATIONS

Series B—Use on straight and front hole edges to remove burrs and other surface defects.

Series C—Use on flat surfaces and front and back hole edges.

Series D—Use for precision work on thin-gage sheet metal.

Series E—Use on sheet edges in hard-to-reach applications.

Series BURR-BI—Use on hard and soft materials, including sheet metal up to 16mm (0.63") thick.

Series F—Use on Hole Edges (ID) and Outer Edges (OD).

Series K—Use for finishing and deburring sheet edges.

Series L—Use on inner and outer straight and hole edges on sheet metal.

Series M—Use for deburring and finishing tube edges.

Series U—Miniature tools for deburring and scraping applications in dies and molds industry.

Deburring Tool Sets

SHAVIV USA by Vargus Leading Deburring Solutions

Refer to the Deburring Blade Material and Application Chart, above for descriptions and applications.

Description	Series	Includes	Item No.
Plumber Set	B, E	Ergo-Burr II Handle, F Holder, F26X OD Countersink, Glo-Burr E Handle with E100 Blade, (3) E100 Blades in Carrying Case	**52JH86**
Electrician Set	B, E	Mango II Handle, F Holder, F12 Countersink, MB2000 Handle with E100 Blade, E111 Blade, E400 Scraper Blade in Carrying Case	**52JH85**
Deburring Tool Sets	B	Handle, B Holder,B10 and B20 Blades	**45JD68**
	B	Handle, B Holder,B10 and B20 Blades	**45JD69**
	B	Mango II Handle, B Blade Holder, (2) B Blades	**45NX63**
	B, C	Mango II Handle, B, C Holders, B10, B20, B30, B60, B11, B70 Blades, C40 Scraper Blade	**45NX98**
	B, E	Aluminum A Handle, TiN Coated Blades	**45NX52**
	B, E	Mango II Handle, M Blade Holder, B10, B20, B30, E100, E111, E200 Blades	**45NX90**
	B, E	Mango II Handle, M Blade Holder for B, E Blades, E100 Blade, E111 Blade, E250 Blade, E400 Scraper Blade, Glo-Burr Handle, B30 Blade, B20 Blade in Carrying Case	**52JH83**
	B, E	Mango II Handle with B, E Holders, B10, B11, B25, E111, E250, E400, E707 Blades, Cera-Burr Ceramic Blade Tool	**45NX51**
	BURR-BI	Mango II Handle, BR Holder, Handguard, (2) R10 Blades	**45NX91**
	E	(4) Handles, E100, E200, E300 and E111 Blades	**45JE01**
	E	Aluminum A Handle, E Blade Holder, E100, E200, E300 Blades	**45NX89**
	E	Handle, E Holder, E100, E200 and E300 Blades	**45JD72**
	E	Mango II Handle, E Blade Holder, (3) E Blades	**45NX70**
	E, C	Mango II Handle, E, C Holders, E100P, E111, E200, E300, E600, E700 Blades, C42 Scraper Blade	**45NX99**
	U	Aluminum A Handle, U Holder, Scrape-Burr 400, Fine-Finishing Blades BUS1, BUS2, BUS31, BUS4	**45NX53**
Auto-Burr Set	B, E	Aluminum A Handle, FR Ratcheting Holder, F26X OD Countersink, F20 Countersink, UB2000 Handle with B11 Blade, B20 Blade, B25 Blade, B10S Cobalt Blade, B30 Blade in Carrying Case	**52JH84**
Aluminum Works Set	B, E	Aluminum A Handle, F Holder, F12 Countersink, MB2000 Handle with E200 Blade, E300 Blade in Carrying Case	**52JH87**

No. 45JD68

No. 45NX53

Siphon-Feed Polymer Cabinet No. 15E778

Siphon-Feed Steel Cabinet No. 53RJ26

Siphon-Feed Steel Cabinet No. 48ME53

Pressure-Feed Steel Cabinet No. 6YY21

Abrasive Blast Cabinets

Use for surface preparation, or to remove rust, scale, and paint from small parts and/or larger pieces with irregular surfaces. **Siphon-Feed** (suction) cabinets, use suction created by a venturi to suck the abrasive media into the airflow and out the nozzle; they let you refill media while in operation, for continuous blasting. Although production is slower than pressure-feed cabinets, they provide equivalent results at a lower initial cost. **Pressure-Feed** cabinets use a Pressure Pot to pressurize the abrasive media before it mixes with the air in a mixing chamber, producing a high-quality finish at a faster rate.

Note: Additional accessories and parts are available on Grainger.com®.

ALC Polymer Blast Cabinets—Cabinets feature large viewing window, protective underlay, and leak-resistant 1-pc. construction, and come complete with gun and hose. Ready to hook up to air and add abrasive. Can be used with a small shop vac (not included) as a dust collector.

Econoline Steel Blast Cabinets—Cabinets handle glass, aluminum oxide, corn cob, and silicon carbide abrasive media. Require 5-HP compressor and 12 cfm compressed air at 80 psi. They're constructed with 14-ga. steel bodies, 11-ga. steel legs, and have a spring-loaded trap door attached to the hopper bottom. Include carbide nozzle and air jet, regulator and gage, foot pedal actuator, and replaceable cloth-lined rubber gloves. Dust collector required (sold separately); except No. 6YY21 comes with 400 cfm unit.

ALC Steel Blast Cabinets—A large viewing window and oversized top door opening help accommodate a wide range of items. The fully welded construction keeps blasting media from leaking out of the cabinet. Include a dust collector.

Allsource Steel Blast Cabinets—A foot pedal-controlled siphon blast gun reduces operator hand fatigue and a rear-mounted 90 CFM dust collector minimizes the machine's footprint to free up floor space. The oversized front door opening lets you easily load a variety of items into the cabinet. No. 53CV99 has a 150 lb. grate capacity. No. 48ME53 has a 400 lb. grate capacity and No. 48ME54 has a 500 lb. grate capacity to let you work on heavier items, such as engine blocks and cylinder heads.

Dust Collectors

Dust collection systems remove dust and dirt particles from the air, and return filtered air to the room.

Bag-Style Filter—Bag filters can be laundered and reused. Chip capacity is 90% @ 2.5 microns.

Cartridge-Style Filter—99.98% efficient cartridge-style filters remove particles from the air as small as 0.5 microns.

ALC WESTWARD ALLSOURCE BLASTERS & EQUIPMENT

Portable Abrasive Blasters

For removing rust, scale, paint, and dirt from metals, wood, brick, and stone.

Note: Additional ALC accessories and parts are available on Grainger.com®.

Siphon-Feed—Westward® model includes blast gun and 3/16" ceramic nozzle. No. 10Z912 has a steel hopper with pull handle and 6" wheels for easy maneuvering around the jobsite. Nos. 15E765 and 15E766 have steel construction and can be used with most dry abrasives. No. 15E766 includes sturdy steel cart with two 6" wheels.

Pressure-Feed—All Westward units include an air line filter and pressure gage to control airflow. Nos. 10Z914 and 10Z915 have a recessed top for filling of blast media. Nos. 15E742 and 15E745 have powder-coated steel construction with a manual pull-up tank closure and deadman handle design; can be used with most dry abrasives. Include hood.

Siphon Gun Blaster Kit—Simple blaster is ideal for small projects.

ECONOLINE

Portable Soda Blasters

Environmentally friendly units use soda media to remove coatings including carbon, paint, dirt, mold, oil, soot, and graffiti from almost any surface; no advance cleaning or surface masking is necessary. Water filter, pressure regulator, and control valve system included. ASME coded. No. 6YY25 is lightweight with a carrying handle. 10 lb. of soda provides up to 30 min. of blast time. Includes 5-ft. hose and 1/8" ceramic nozzle. No. 6YY24 is wheel-mounted and ready for instant hook-up to air supply. Includes 25-ft. hose, 1/8" ceramic nozzle, air safety lockout, and blast hood with cap.

LINCOLN ELECTRIC Miller

Welding Gloves

- Kevlar® stitching

Gauntlet cuff provides additional wrist protection.

MIG, Stick—Thick, heavy-duty gloves offer superior burn and spark protection, and high-heat resistance.

TIG—Thinner leather provides superior feel and dexterity with light burn, spark, and heat resistance.

Welding Helmets with Auto-Darkening Filters

Miller

- Auto On/Off power control
- Sensitivity and delay controls

All include: magnifying lens holder, (5) outside and (2) inside cover lenses. Digital Performance, Digital Elite, Digital Infinity, and T94™ Series also include lithium batteries and a helmet bag. All meet ANSI and CSA standards; except T94 Series does not meet CSA.

Classic Series—Feature 2 arc sensors, Auto On/Off, and Sensitivity control button. Nos. 38VU60 and 34C363 have integrated grind shield. Battery operated with solar assist, except No. 38VU59 is solar only.

Digital Performance and Digital Elite Series—All feature easy-to-use digital controls. Battery powered with solar assist. Digital Performance series have 3 arc sensors and 3 modes: Cut, Weld, and Grind. Digital Elite Series performs with 4 arc sensors and 4 digital modes: Weld, Cut, Grind, and X-mode.

Digital Infinity™ Series—Features a large viewing area and 4 modes: Weld, Cut, Grind, and X-mode. X-mode uses electromagnetic sensors to help you see see your arc, even in bright sunlight or if sensors are blocked. InfoTrack™ tracks arc time, and gives you the ability to set an alarm or timer.

T94™ Series—Feature 4 arc sensors. ClearLight™ high-definition optics and X-Mode™ feature help you see the arc in even difficult conditions, such as in bright sunlight, or if sensors are blocked. The cover lens is simple and easy to change out, to help reduce downtime.

Weld-Mask™—Goggles provide auto-darkening in compact configuration. Includes 2 outside cover lenses, 2 sensors, antifog film, head-covering, and carrying case.

Welding Helmets with Auto-Darkening Filters

3M

- Switching speed: 1/10,000 sec.

Speedglas™ SL—Motion sensor automatically turns ON welding filter when helmet is picked up. Appropriate for most arc welding process such as stick, MIG/MAG TIG, and plasma welding.

Speedglas™ 100 Series—Locks in light state grinding mode 3 when grinding. Delay function allows user to set opening time. With built-in magnifying lens holders. For most Stick, MIG and higher amp TIG and arc welding processes.

Speedglas™ 9000 Series—The slim design features precision optics and a comfortable suspension. Use in most MIG/MAG, Plasma, Stick, and TIG welding processes.

Speedglas™ 9100 Series—Feature a locking up-and-down pivot, side exhaust vents, and side windows. Sensitivity adjustment allows use with all Stick, MIG and TIG, welding processes with grinding torch modes. Nos. 6DNC6, 9NUA2, 9A842, 4CWG9, and 4CWH1 have ratchet headgear. No. 6DNC7 has a hard hat adapter.

Auto-Darkening Welding Helmets

WESTWARD

Ratchet headgear with removable sweatband. Include extra lens covers.

Solar—Provide UV/IR protection up to shade DIN 16.

Professional—Feature external shade control with grind function.

Professional Digital—Feature digital control display. No. 33N557 has 4 control buttons. Headgear can hold and lock. Internal slots hold magnify lens.

LINCOLN ELECTRIC

725S Series—Cheater lens-capable lightweight thermoplastic helmet features a Grind mode and has 2 independent arc sensors to help avoid blind spots. With continuously variable external shade control. Solar operated with battery assist. Meets ANSI Z87.1, CSA.

3350 Series—4C technology provides a large viewing area, and 1/1/1/1 Optical Clarity to help improve visibility and reduce eye strain. Solar powered.

2450 Series—With a 28% larger field of view compared to similar helmets in their class, and 4C Lens Technology, the 2450 Series helmets help improve visibility, reduce eye strain, and provide real color view. With 1/1/1/1 Optical Clarity. Solar operated. No. 54EE97 has 3 modes (welding, cutting, and grinding).

OPTREL

weldcap®—Comfortable lightweight cap has manual shade level adjustment and offers more than twice the field of view of most standard industry welding helmets. Battery operated. Meets ANSI Z87.1, AS/NZS 1337/1338.

vegaview 2.5—Improves your vision with more than 4-times lighter view in Light state and in Grind mode. Manual shade level adjustment. Solar powered with battery assist. Meets ANSI Z87.1.

e650 Series—Includes Grind Mode, continuously variable sensitivity control, and opening delay function, as well as PAPR respiratory protection. All functions can be accessed from outside the helmet. Solar operated with battery assist.

e684 Series—Special cooling design with an HD viewing lens and adaptive auto-adjusting shade level. Includes PAPR respiratory protection. Battery operated. Meets CSA Z94.3 standards.

panoramaxx—Comfortable helmet helps you improve awareness of your surroundings, with a panoramic faceshield that offers a 6-times larger field of vision than standard welding helmets. A special UV/IR filter provides truer color rendering. Solar operated, with battery assist.

JACKSON SAFETY

NexGen HSL100—Features 3 modes: Weld, Torch, and Grind. With sensitivity and delay adjustments that can be made with easy-to-use digital controls. Includes a built-in mag lens holder. Solar operated with battery assist.

HSL 100—Ultra light weight helmet is made to give you an unobstructed view without lifting the hood. Features a variable Auto-Darkening Filter, with 4 independent sensors and easy-to-use digital controls that allow you to make sensitivity and delay adjustments for different tasks and durations.

WELDING HELMETS

Flip Up Front

Helmets have an impact-resistant straight top that extends well over the head for added protection. Adjustable ratchet suspension.

Confined Space Pro

Super Kool™ helmet coating resists weld spatter and keeps helmet cooler than uncoated helmets. Proprietary lens retention system allows easy filter, cover, and protective plate loading. Ratchet suspension.

Super Slim™

Super Tuff™ nylon helmets are lighter than fiberglass. Drop-down ratchet headgear. Super Kool™ helmet has coating that makes helmet cooler, and sheds spatter without burning.

Tigerhood

Seamless-shell thermoplastic helmet has an extended throat to help block fumes, smoke, and sparks; reducing the risk of burn. With lift-front lens and 3C headgear. Installed shade 10 filter lens. Nos. 10C434 and 10C432 have telescoping lid. No. 2XKX9 includes loop for attaching hard hat.

Pipeliner®

Fiberglass with neoprene strap headband.

W10 Series

Passive welding helmets offer a clear, unobstructed view of the weld puddle. Include polycarbonate filter. No. 2KUV9 has a flip front. ANSI Z87.1 and CSA Compliant.

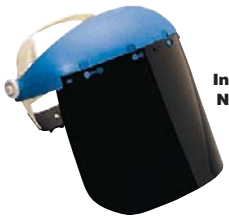
WELDING HOOD

Leather hood with ratchet headgear is designed for tight or confined spaces. Cover and filter plates (included) are easy to load.

INFRA-GUARD® FACESHIELDS

Protect user from infrared and ultraviolet rays during oxygen/acetylene welding and cutting operations. Ratchet headgear.

Super Slim™ Super Kool No. 4T542



Tigerhood Classic No. 10C433

WH10 HSL 100 No. 2KUV7

Welding Hood No. 6FKT2

Infra-Guard No. 1N785

Powered Air Purifying Respirator (PAPR) Systems and Respirators

POWERED AIR PURIFYING RESPIRATORS (PAPR)

NIOSH Certified, except Nos. 49WM68 and 32NC32. APF of 25.

Miller®—Feature a lightweight, low-profile blower design with integrated load-bearing shoulder straps to help reduce fatigue, and a 9.22 sq. in. auto-darkening lens. Dual airflow speeds allow for user adjustment in varied work conditions. Audible and vibrating alarms indicate low battery and/or constricted airflow.

3M™—Feature side shields that provide improved peripheral vision, and an auto-darkening visor plate.

LPR-100 HALF MASK RESPIRATORS

Low-profile design fits comfortably under a welding helmet without obstructing the user's view. Large exhaust valve eases breathing. Filter media maximizes efficiency in humid conditions, extending filter life. NIOSH Certified, APF of 10.

PAPR System No. 408M95

PAPR System No. 32NC50

Half-Mask Respirator No. 34C395

VENTBOSS BY ROBOVENT

Fume Collectors

▪ Rated at MERV 13

Collectors are suitable for low-production manual welding applications. Feature spark arrestance and easy-to-maintain filters.

Series 100—Roll-around units move quickly into position, to provide powerful source capture extraction. Fume arms have external support for increased air draw. Manual compressed air filter cleaning.

Series 200—Stand-alone weld booths feature simple plug-n-play setup: just connect the power and compressed air. Feature a large work surface, pulse filter cleaning, and side panels.

Series 300—Compact, space-saving units have a fork pocket base for easy relocation. The large air draw accommodates multiple applications, depending upon the configuration. Pulse filter cleaning.

LINCOLN ELECTRIC Miller

Fume Extractors

LINCOLN

Automatic start/stop current sensor extracts only when needed, extending motor life. Choose low or high extraction settings.

Miniflex®—Made for light-duty welding applications, its small size and easy portability help make the Miniflex particularly well-suited for use in confined and hard-to-reach spaces. Quiet operation.

X-Tractor®—The high-efficiency polyester filter can be cleaned using compressed air with the rotary air jet system. Includes 16-ft. flexible hose, 2 spare sets of motor carbon brushes, and 12-ft. power cord.

Mobiflex®—Mobile low-vacuum fume extractor is ideal for light- to medium-duty use in small manufacturing facilities, schools and training environments, and more. An internal spark arrestor prevents sparks from reaching the filter. Do not use with cutting or arc gouging operations.

MILLER

Nanofiber filter technology captures submicron welding particles.

FILTAIR® 130—Compact, portable extractor has easy-rolling casters. The high-efficiency cartridge filter is manually cleanable to help extend service life and minimize maintenance. Adjustable airflow. Includes 20-ft. power cord and 8-ft. collection hose.

FILTAIR® MWX—Delivers MERV 15 filters that capture submicron weld fumes and provide a longer holding capacity.

FILTAIR® SWX-S—Designed specifically for welding applications with higher arc times, this telescoping-arm unit can be mounted on a wall or column. Includes a self-cleaning filter and all mounting brackets. MERV 15 rated.

FILTAIR® SWX-D—Similar to the SWX-S, but with a disposable filter, this unit is designed to be used in lighter manufacturing applications with lower arc times. Includes all mounting brackets.

FILTAIR® Capture 5—This system features Zoneflow™ technology that will collect up to 5-ft. radius of weld fumes and help produce cleaner air, increase efficiency and extend filter life.

Welding Blankets, Rolls and Pads

Welding Blankets—Use to protect workers and equipment from intense heat, flame, welding sparks, and molten metal splash.

Welding Blanket Rolls—When you need extended lengths or other custom size blankets, this economical solution can be cut to length.

Welding Pads—Welding pads are made with 1" of high-heat insulation, encased by a solvent-, abrasion, and puncture-resistant material. Can be used as kneeling pads, heat shield when working on hot vessels, and for insulating.

Welding Curtains and Rolls

Curtains—Use to enclose robotic welding cells and other welding work areas to create a customized, enclosed space and help protect personnel and equipment from welding sparks, spatter, and slag. Silicone Coated Fiberglass Curtains have one grommet on each corner.

Curtain Rolls—When you need extended or other custom sized curtains, this economical solution can be cut to size. Curtain Rolls With Grommet have grommets on 12" centers on one side.

STEINER WESTWARD

Screens, Curtain Walls and Booths

Screens, walls, and booths help safely confine hazardous sparks, arcs, or open flame in open areas, where there is no place to hang a curtain.

Screens—Easy-to-assemble kits include flame- and heat-resistant sides and a sturdy, freestanding steel frame.

Curtain Walls and Booths—Track and roller Curtain Walls provide good protection, while maintaining easy access. Kit includes curtain, 18-ga. steel track, rollers, and suspension mounting hardware. 4-sided Welding Booth Kit enclosures have one side with a sliding curtain wall and 3 fixed sides.

MIG Welders

HOBART

Handler® Series feature self-resetting thermal overload and motor protection.

Handler® 140—Has all the features of the Handler 130 and is MIG ready, with no additional kit required. 5 voltage settings help you fine tune your arc.

Handler® 190—Spool gun ready welder has all the features of the Handler 140, plus a 7-position voltage switch and infinite wire feed speed control.

Handler® 210—Comes with all the features of the Handler 190, plus 7 voltage settings at 230V, and 4 voltage settings at 115V. Most portable at 210A.

LINCOLN

Spool gun ready. All welders, except Easy-Core™ 125 and Handy MIG® feature Diamond Core Technology™ to help ensure an excellent low-spatter arc and a wide voltage range.

Easy-Core™ 125—Includes MIG gun, 10 ft. cable with brass connection, 4-Pin MS-Type connection, contact tips, gasless nozzle, spindle adapter, drive roll, flux core wire, and 10-ft. cable with clamp.

EasyMIG® 180—Includes Magnum® 100L gun and 10-ft. cable assembly with brass gun connection and 4-pin MS-Type connection for trigger control; 0.025 and 0.035 contact tips; gas nozzle; gasless nozzle; and a spindle adapter for 8" dia. spools. Also includes drive roll, gas regulator and hose, and sample spools of MIG and flux core wire.

Handy MIG®—User friendly welder comes with just about everything you need to get started welding. Includes gun and cable assembly, work cable with work clamp, gasless nozzle, gas nozzle, gas regulator, gas hose, flux-core and MIG wire, contact tips, handshield, and chipping hammer/brush.

Power MIG® 180C—Includes 10-ft. Magnum® PRO 100L gun, gas and gasless nozzles, cable liner, contact tips, work cable and clamp, gas regulator and hose, adapters, MIG and flux-cored wire, drive rolls, and wire guides.

Power MIG® 256—Includes 15-ft. Magnum PRO® MIG gun, top-mounted expendables tray, work clamp with 10-ft. cable, 10-ft. power cable with plug, drive roll and wire guide, and gas regulator and hose kit.

MILLER

Millermatic® 141 and 211—Feature Auto Spool Gun Detect™ that automatically detects when spool gun is hooked to the machine. Auto-Set™ feature allows quick and easy setup with spatter-free start.

Millermatic® 252—Digital front panel with built-in timer menu to preset voltage and wire feed speed. Includes 15-ft. MIG gun, 10-ft. cable with work clamp, regulator and hose, dual-groove drive rolls, and contact tips. Auto Gun Detect automatically adjusts voltage and wire feed speed.

Millermatic® 350P—Weld with standard MIG gun, spool or push-pull guns. Includes 10-ft. power cord, 15-ft. MIG gun, 10-ft. cable and clamp, flow gauge and hose, contact tips, drive rolls, and Cd. Auto Gun Detect. Aluminum models are optimized for aluminum welding, and are only compatible with spool or push-pull guns.

MIG Spool Guns

Lincoln® Electric—Easy-to-set-up Magnum® Series Spool Guns can be used with all aluminum alloys and recommended wire diameters. No. 49JR60 includes Magnum® PRO Expendables: Copper Plus™ contact tips and long-life diffusers with Anti-Seize™ threads. No. 6JDU0 has on-board contact tip storage, and a fixed spool brake to help prevent tangles. Easily replaceable barrel.

Miller® Spoolmate™ 100—Suitable for welding aluminum and soft alloy wires. Includes extra contact tips, nozzle, and carrying case.

Miller® Spoolmate™ 150—Air-cooled spool gun can be used with both 4000 and 5000 Series aluminum wire. Includes 20-ft. cable and extra contact tips and nozzle.

Miller® Spoolmate™ 200—Features 20-ft. direct connect cable, wire feed speed adjustment, easy-to-access drive assembly and drive rolls, 2-stage trigger with built-In gas valve, toolless barrel removal, and 3 gun barrels.

Miller® Spoolmatic—For aluminum welding. Feature 2-stage trigger and spool canister that rotates 180°. No. 5GWK8 includes 15-ft. cable. No. 5GWK9 includes 30-ft. cable.

Tweco®—Use in MIG welding operations, with steel, stainless steel and aluminum. Uses small 4" spools.

MIG Welding Guns

WELDING GUNS

BTB Air-Cooled MIG Guns

Lightweight, with easy-to-change trigger options. Interchangeable power pins are compatible with feeders from most major manufacturers.

Clean Air™ Fume Extraction MIG Guns

Nozzle shroud adjusts to 1 of 4 positions, to improve fume capture, gas flow, and weld access. Features rubber-molded handle and 360° swivel vacuum hose. Compatible with vacuum systems from most manufacturers. Use with solid and flux-core wire.

Dura-Flux™ Self-Shielded Flux-Cored Guns

Each features an ultra-heavy steel monocoil power cable. Compatible with feeders from most major manufacturers.

S-Gun™ 250 Amp Air-Cooled MIG Guns

Feature a locked rotatable neck, steel monocoil power cable, and molded handle.

Magnum®

Small, lightweight guns include connector. PRO Series guns have high-quality copper and aluminum parts to help ensure superior electrical contact and heat dissipation.

Hobart-Compatible

Air-cooled. Nos. 5XRX8 and 5XRX9 are semiautomatic.

M-Series

Rotatable gooseneck, 3-pc. nozzle construction and interchangeable contact tips. Brass contact tip adapter. 100% duty cycle with CO_2 gas, 60% with mixed gas.

Tweco

Air cooled. No. 3DUK6 is rated at 60% duty cycle using CO_2 gas. No. 1UMJ4 is constructed with diamond grip handles, and has insulated conductor tubes with metal jacketing.

GOOSENECK WELDING GUNS

XR™ Pistol Grip

Feature adjustable gun barrel, trigger hold, and replaceable feed cable liner.

XR Aluma Pro

Aluminum, series-specific tension setting ensures smooth push/pull wire feeding performance. Feed wire at 900 ipm. 3¾ turn potentiometer. Easy-to-rotate, self-seating head tube. Trigger has wiping action to keep contact points clean for reliable connection. Feature trigger hold, isolated common knurled drive roll, and replaceable feed cable liner. For use with XR™ control or Millermatic® 350P.

WESTWARD · HOBART FILLER METALS · LINCOLN ELECTRIC

MIG Welding Wire

Aluminum—Designed for aluminum surfaces. Best when used on clean or prepared surfaces. Use with argon shielding gas. DC reverse polarity.

Carbon Steel—Premium wire for general-purpose welding is designed for use on mild steel. Deposits require minimal slag removal. Use with CO_2 or argon-CO_2 shielding gas on clean or prepared surfaces. DC reverse polarity.

Stainless Steel—Use to weld stainless steel. Stainless steel wire requires shielding gas.

SuperGlaze 4043—Designed for welding 6XXX alloys and most heat-treatable casting alloys. All-position.

SuperGlaze 5356—General-purpose filler alloy for all-position welding of 5XXX series alloys.

Innershield NR-211-MP—Versatile all-position wire. Fast freezing characteristics accommodate poor fit-up.

Super Arc L-50—Copper-coated for long contact tip life. Supports short-circuiting, globular, axial spray, and pulsed spray transfer in all positions.

Super Arc L-56—Excellent toe-wetting for optimal bead appearance. Supports short-circuiting, globular, axial spray, and pulsed spray transfer in all positions. Copper coated for long contact tip life.

Stick Welders

For general maintenance, repair, and light industrial applications.

es 95i—Lightweight, compact multiprocess Stick Welders are ideal for home, utility/farm, and maintenance work. Include electrode cable with holder, work cable with clamp, stick electrodes, power cord, and carrying case. No. 447K22 also includes TIG torch kit and argon flow gauge regulator.

Stickmate®—Portable Stick Welders are easy to carry and store, and they start up quickly and easily and provide a reliable arc thanks to Hot Start™ technology. Include electrode cable with heavy duty holder, work cable with clamp, and power cord. No. 404J62 has MVP™ adapters for 120V and 240V.

AC/DC 225/125—Features a front-mounted polarity switch and full-range amperage selector switch.

AC-225—A full range 40A to 225A selector switch helps ensure a uniform arc.

Idealarc® 250—Fan-cooled welder is great for production welding, with welding ranges up to 300A AC and 250A DC; features a full-range continuous current control dial with indicator. Can be used with just about every type of electrode, including low hydrogen, stainless steel, hard facing, aluminum, and bronze. Includes power factor capacitors.

Invertec® V155-S—Lightweight (15 lb.) portable stick welder operates in two separate modes—SOFT and CRISP—to provide the right arc characteristic for different types of electrodes. Can even be operated as a TIG welder in Touch Start TIG® mode. Includes stick electrode holder, work cable and clamp, shoulder strap, 120/230V input cord with 120V plug, and extra 120V plug.

CST 280—2-position manual switch for easy voltage changeover. Feature Lift-Arc™ start and Fan-On-Demand™ cooling system. For use with stick electrodes up to 3/16" and TIG welding of pipe and plate.

Maxstar®—Both models include 13-ft. stick electrode holder, 10-ft. work clamp with 25mm Dinse-style connector, and 120V and 240V power cords. No. 53AY42 also comes with a protective Miller X-Case™ and an adjustable handle/shoulder strap for safe, easy transport.

Thunderbolt—At only 15 lb., the lightweight Thunderbolt weighs nearly 100 lb. less than previous versions, for outstanding portability. Hot Start™ technology provides quick, reliable starting. Include electrode cable with holder, work cable with clamp, and power cord.

Electrode Ovens

Portable—Heating elements provide uniform, continuous heat for electrode protection. Feature adjustable thermostat (except No. 3KB70), indicator light and removable power cord with locking inlet. Durable powder-coated finish. No. 6YE39 has carrying handles on each side. No. 3KB73 comes with pull handles and wheels for easy portability.

Bench/Floor—Circular shape promotes even heat distribution. Feature adjustable thermostatic control and indicator light.

TIG/Stick Welders

These complete packages include just about everything you need to get started with TIG welding.

Light Industrial welders offer low weld penetration for applications such as pipe fabrication, aerospace, and shipbuilding.

Medium Industrial welders have medium penetration for automotive maintenance, aluminum ship repair, and precision fabrication.

Heavy Industrial welders produce deep weld penetration for optimal strength in applications such as onsite pipe welding, infrastructure, or heavy equipment manufacturing.

Note: Complete list of individual kit contents is available at Grainger.com®.

ESAB® ET Series—Inverter-based units deliver higher output and duty cycle. Include TIG torch and accessories, electrode holder and leads, and electrodes.

EZ-TIG 165i—Inverter-based with HF start and simple interface controls. Includes ceramic gas cup, work cable with clamp, remote foot control, regulator with hose, and power cord.

Maxstar® Series—Has thermal overload protection with indicator light, built-in gas solenoid, and full-function remote control. Include cords and connectors.

Invertec® V155-S—Features two stick modes to provide the right arc characteristics for different types of electrodes. Includes TIG torch with Ultra Flex™ cable and Twist Mate™ adapter, stick electrode holder and 10-ft. cable, work clamp and 10-ft. cable, input cord and plug, and gas regulator.

Syncrowave® Series—This complete package offers outstanding power and performance for light and industrial applications. Include power source, cords and plugs, electrode holder, regulator, flow gauge, and hose.

Diversion™ 180—Inverter-based AC/DC power source with easy-to-use operator interface. Includes 12.5' torch with backcap, ceramic gas cup, 3/32" collet and collet body, remote foot control, 12' work lead with clamp, and regulator/flow gauge with hose.

Precision TIG® Series—Micro-Start II Technology provides high-quality welds with stable low amperage starting, welding, and cratering for AC and DC welding. Include work cable and clamp.

Renegade™—Take this small, lightweight system with you to just about any jobsite. Not only is it highly portable, but also rugged enough to handle extreme conditions, and has the power to tackle tough jobs in aerospace, civil construction, and other demanding industries. Includes power supply, 10-ft. input cable, and two OKC 50 connectors.

Dynasty® Series—Offers Lift-Arc™, Blue Lighting™, Auto-Line Power Management Technology, Fan-On-Demand™, and superior stick performance. AC/DC output. Include cords and connectors.

DGP DIAMOND GROUND PRODUCTS

Tungsten Electrode Grinders

User-friendly portable grinder provides a quick, safe, economical solution for diamond grinding, flatting, and notch-cutting your tungsten electrodes, with an enclosed grinding area that captures nearly all the excess tungsten electrode dust for safe and easy disposal. Handles tungsten diameters from 0.040" to 3/16" (1.0mm to 4.8mm).

TIG/Stick Welding Accessories

Water Cooled Torch Kits—Use No. 5GWJ4 for general purpose applications; use No. 5GWJ6 for high amperage and continuous-duty applications. Both include 25-ft. torch and accessories, nozzle, cable cover, tungsten, smith regulator, gas hose, dinse adapters, and 15-ft. lead with work clamp.

Coolant Systems—Provide continuous coolant flow at a constant pressure; thermally protected motors guard against overheating. No. 1Z542 rotary vane pump has an On/Off switch and paddle wheel coolant flow indicator. With fin and tube heat exchanger. 3-gal cap. 115VAC, 50/60 Hz. No. 4UV46 coolant contains ethylene glycol and deionized water that helps protect against freezing or boiling.

Engine-Driven Welder/Generators

Electric start with continuous power for generator, plasma cutter, or inverter welder applications.

Blue Star—Compact, portable unit features electric start, auto-idle, and engine hour meter. Includes 120V GFCI and 240V receptacles.

Bobcat™—Bobcat 250 welders are engine-driven welder/generators with a larger stabilizer for less spatter, smoother arc, and more-precise amperage settings. The wider range is excellent for Stick/Flux-Core welding and carbon arc gouging. No. 16A178 delivers back-up power for pivot irrigation systems.

Trailblazer®—All-in-one multiprocess welder/generator delivers a smooth, stable arc and superior performance. Features an integrated rotary screw air compressor, and battery charge/jump start.

Big Blue—Clean, quiet, multiprocess machines are built to handle the most-demanding jobs. All-in-one units Nos. 408N08 and 408N12 eliminate the need for an air compressor.

Miller ESAB

Multiprocess Welders

High-performance integrated welders for MIG, stick, and TIG applications.

Multimatic™ 200—Lightweight (29 lb.), all-in-one unit has Auto-Set™ Elite that simplifies fine-tuning settings for multiple materials and processes. Includes: 10-ft. Bernard® gun, 13-ft. stick stinger, 10-ft. work cable with clamp, flow gauge regulator with 12-ft. gas hose, and material thickness gauge. No. 40GT18 also includes the Miller TIG Contractor Kit, which comes with a Weldcraft A-150 TIG torch, 25mm Dinse-style connector, an RFCS-6M foot control, and an AK2C torch accessory kit.
- **Output range: 200A**

XMT® 350—Internal airflow helps protect electrical components and PC boards from debris. Lift Arc™ increases output amperage at the start of weld, to eliminate electrode sticking and inclusion; line voltage compensation assures constant output. Include process selector switch, dual digital meters, arc control. Automatic thermal protection.
- **Rated output: 350A**

Fabricator®—3-in-1 units are lightweight and portable, providing a strong power source. Include: MIG gun, argon regulator/gauge and hose, electrode holder and ground clamp, drive rolls and contact tips, sample electrodes, and shoulder strap.

Rebel™—Powerful, highly portable unit can go anywhere you go, and comes with everything you need to get started welding. Includes: Tweco Spray Master 250 MIG Gun, Victor Argon flowgauge regulator, 12½ ft. gas hose, return clamp with leads, drive rolls and contact tips, 0.9 mm wire, and power adapter.

Spectrum 375 X-TREME No. 13Z845

Air Plasma Cutting Systems

HOBART WELDERS · Miller · THERMAL DYNAMICS · JACKSON

AirForce™ 12ci—Inverter-based cutter can cut through mild steel to ¼". Powered by standard 120V household current, with a built-in air compressor.

AirForce™ 27i—Inverter-based cutter can cut through all conductive metals, up to ⅝" thick. Operates from standard 120 or 240VAC power with MVP power cord.

Spectrum® 375 X-TREME—Automatically connects to 115V or 240V. Cut mild steel to ⅜" at 15" per min. Includes 12-ft. torch and work clamp cables, MVP power cord, plugs, storage case, and extra consumables.

Spectrum® 625 X-TREME—Cut mild steel to ⅝". Ultra-Quick Connect™ torch cable allows portability and easy interchangeability of handheld or machine torches, for manual or automated cutting. Flexible quick-connect ground cable is easy to position. Each includes torch with cable, work clamp with 20-ft. cable, 12-ft. power cord, MVP adapters with 5-15P (120V, 15A) and 6-50P (240V, 50A) plugs, and extra consumables. No. 49X315 includes a 12-ft. torch; No. 49X316 has a 20-ft. torch.

AirForce 12ci No. 44YW19

Spectrum® 875 and 875 Auto-Line™—Cut mild steel to ⅞". Portable Ultra-Quick Connect™ torch cable allows interchangeability of handheld or machine torches. Each includes heavy-duty work clamp, 10-ft. power cord, and extra consumables. Nos. 49X319 and No. 49X323 include 20-ft. torches. Nos. 49X320, 49X324, and 49X327 include 50-ft. torches. No. 49X325 includes a 25-ft. torch. Both Nos. 49X325 and 49X327 feature long-body torches.

AirCut™—Lightweight cutting system has a built-in air compressor, to eliminate the need for an external compressor. Provides outstanding cutting power right out of the box; plug in and start cutting steel from ⅛" to 3/16". Easy-to-use hand torch switch controls.

CUTMASTER®—Powerful, lightweight units have hand torch or hand pendant control. Auto Pilot restart reignites the pilot while cutting expanded metals, for more-efficient operation. Include 75° angle torch with 20-ft. lead, 10-ft. input power cable, work cable and clamp, spare parts kit. No. 54TA04 cuts through ⅝" steel. No. 11G216 cuts steel to ¾". No. 20UJ67 can cut through steel to 1¾". No. 20UJ68 can cut through 2" steel.

Arc Gouging Torch No. 5UR92

Arc Gouging and Cutting

ARCAIR

Arc Gouging Torch—Speeds backgouging, edge preparation, defect repair, and other metal removal jobs. Low heat input minimizes deformation. Rated to 1000A for heavy-duty metal removal. Accepts round electrodes from 5/32" through ½", and ⅜" and ⅝" flat electrodes.

Welding Accessories

Two Hose Manifolds—Connect at the regulator outlet, enabling use of 2 torches at the same time.

Welding Pliers—Use these spring-loaded pliers to cut and draw welding wire, clean parts, grip nozzles, and install or remove insulator bushings. PVC handgrips.

Butt/Fillet Weld Gauge—Use to check and measure the size of butt welds, root openings, and convex and concave fillets. A finger knob allows easy locking. Laser etched stainless steel with threaded pin.

Cylinder Adapter Set—F31 tank to regulator adapter converts B tank CGA 520 to MC CGA 200 regulator. F41 converts MC tank CGA 200 to B CGA 520 regulator.

Hose Repair Kit—Includes heavy-duty crimper, both A and B sizes of 24 nuts, 24 nipples, 4 couplers, 32 ferrules, and 6 splicers. For hoses 3⁄16" to 1⁄4" I.D.

Chipping Hammers and Brush—Forged head has chisel on 1 end and point on the other to remove weld splatter. Steel shaft and wire handle.

Magnetic Welding Squares
No. 2MJJ7

Magnetic Welding Link
No. 3G919

Welding Grounds and Squares

Magnetic Welding Grounds—Powerful, permanent magnetic clamps attach securely to work surfaces. Spring-loaded models have breakaway release handle. On/Off models can be used on flat or pipe surfaces.

Magnetic Holder—Offers fast and accurate positioning, holding, and fit-up of round, and/or square tubing and steel plates.

Magnetic Welding Link—Holds steel plates in position for welding, brazing, and soldering.

Magnetic Welding Squares—Have 2 holes for fixture mounting, and allow thread-rod positioning for larger sheets. Corrosion-resistant zinc-plated poles. Can be used on flat or pipe surfaces.

Welding Magnet Protractor—Magnetic clamp holds ferrous metals at fixed angles for clamping or welding.

Jack Stands and Roller Stands

SUMNER® A Southwire Company

Offered with a variety of heads to keep workpieces in position. Jacks feature 1½" Acme fine adjustment thread, large adjustment handle, quick-action and lock washer. Set screw can lock the jack head to the stand with no loose pieces. Jacks are independently load tested.

Lo-Jack—Fall Guard™ protection allows safety zone around lock washer. 1" square tube base construction with rounded foot pads. Strut tension plate provides superior lateral support.

Fold-A-Jack®—Jack folds up for simple storage and has a built-in carrying handle for easy transport. Fall Guard™ feature provides a safe zone around the lock washer.

FAB SAF™ JACK—Features a quick-action lock washer for fast setup.

Hi Boy™—Easy-to-transport tall jack is specifically designed for use in tight pipe installations, such as in mechanical rooms or tunnels.

Max Jax—Features 12" V head for maximum safety.

Adjust A Roll™—Features a simple design that won't interfere with welding operations, and fast roller adjustment from either side for easy pipe positioning. Bronze bearing helps eliminate arcing.

Pro Roll™—Quick-change roller housings help speed setup. A brake locks loads for layout or fit-up. Adjustable-height, with leveling on either side of stand.

Beam-Jax™—Has automatic clamping device that centers load. Detachable handle attaches to either side and rotates out of operator's way. Reversible beam forks. Handles beams up to 24".

Fold-A-Jack® w/Roller Head No. 19F636

Max Jax w/Casters and Rollers No. 19F640

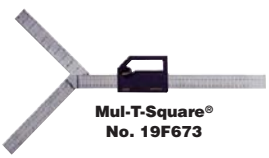
Flange Alignment Tools

Mul-T-Square®—Handles up to 8" flanges and up to 14" fittings. Consists of two 45° arm blades. Marked blades indicate Imperial and Metric units.



Flange Leveler—2-hole and level in one operation. Use Qwik Pin nuts for fast action. Acme threads.

Flange Spreaders—Used for 150 to 1,500 lb flanges. Drive can be rotated by 1⅜" wrench or ½" bar.

Qwik Pins—Quick installing pins work to level flange (2-hole) for tack and weld-out. Acme threads.

Rotary Ground Clamp—Positive anti-arc bearings take loads up to 400 Amps.

Digital Angle Finder—Can be used to establish an accurate centerline on pipes and tanks. Built-in spring-loaded hardened striking pin marks location with the push of a button. Detachable digital gage has a magnetic base.

Miller BuildPro™ Welding Tables WESTWARD SUMNER A Southwire Company

Welding Tables

Steel tables have prewelded legs with removable steel caps, leveling feet, and a lower storage shelf. No. 10N002 has a removable gun holder. No. 494D98 features casters for easy mobility, and includes a 6" X-clamp, side shelf, tool chest, 5" quick-remove vise, and weld curtain, as well as a gun holder, tool holder, and clamp bar. No. 30D255 has 3-position tilt top with guide rails and 2 casters.

Note: Additional welding table accessories are available at Grainger.com®.

WALTER Surface Technologies

SURFOX™ Weld Cleaning Systems

- 120V input

No. 406F85

Electrochemical systems remove heat tint from TIG, spot, and pulsed MIG welded stainless steel, while cleaning and passivating the surface to help fight corrosion. With 2 high-resistant and conductive brushes, including a triangular sleeve brush for MIG welds and large surface areas, and a cylindrical sleeve brush for tight corners and spot welds. Include clamp ring, tungsten insert, ground wire with clamp, and carrying case.

Note: For additional weld cleaning accessories, such as Clamp Rings, Cleaning Pads and Boots go to Grainger.com®.

Fluorescent Dye Penetrants
No. 52YX12

MAGNAFLUX

Welding Penetrants and Inspection Kits

Visible Dye Penetrant Testing—Use this 4-step process to detect stress and fatigue cracks in metal surfaces. Kit No. 3WU63 includes 1 can each of visible penetrant and developer, 2 cans of cleaner/remover, paint marker and hand wipes. Kit No. 3WU62 includes 2 cans each of visible penetrant and developer, 4 cans of cleaner/remover, paint marker, and hand wipes.

Fluorescent Penetrant Testing—Helps find the tiniest cracks in any metal surface. Very sensitive fluorescent dyes comply with most military specifications for fluorescent inspection. Kit No. 52YX12 includes a LED UV light, 1 can each of fluorescent penetrant and developer, 2 cans of cleaner/remover, paint marker, and hand wipes

Magnetic Particle Inspection—Fluorescent and visible magnetic powders, electromagnetic yokes and testing kits provide a nondestructive method to quickly find defects in ferrous metal.

Weldable Primer No. 31MF04

DYKEM Brand | Sprayon | Tempil®

Layout Fluids, Removers And Primers

LAYOUT FLUIDS

DYKEM® STEEL BLUE® and STEEL RED™—Dry quickly, for minimal prep time before scribing. Stay flexible without cracking or chipping. Noncorrosive and toluene-free.

Blue Layout Fluid—Fast-drying, nonflaking, nonetching, and won't peel. Adheres to all metals or glass. EZ Touch® Fanspray nozzle. Dark blue color. Methylene Chloride free.

DYKEM® Hi-Spot Blue—Even-spreading paste shows high spots on bearings. Non-hardening film coating may be left on surfaces to reduce clean up and re-bluing time.

DYKEM® Opaque Staining Colors—Permanent stain provides easy identification of fasteners, parts, inventory, tools, or assemblies. Dries quickly and resists moisture, grease, and oils.

LAYOUT FLUID REMOVERS AND PREP

DYKEM® Remover and Prep—Remove and dilute layout fluids and staining colors. Dries in minutes. Does not contain toluene, 1,1,1-trichloroethane, chlorofluorocarbons, or chlorinated solvents.

Layout Fluid Remover—Specifically formulated to remove layout fluids quickly and efficiently.

WELDABLE PRIMERS

Help eliminate the need to clean metal surfaces before welding. Corrosion- and rustproof primer can be applied to a wide range of metals. Ability to strike welding arc without removal. Max. temp.: 800°F. Dry time: 6 hr. Aluminized finish. No. 31MF04 is a 12 oz. aerosol can. No. 31MF05 comes in 1 gal. can.

Markal Tempil

Temperature Stick No. G6576

Temperature Sticks

- Accuracy: ± 1%

Temperature indicators mark surfaces with a chalky and dull marking that changes to see-through and glossy at the rated temperature. Can be used in in annealing, forging, welding, bonding, forming, and similar applications. Include nonslip gravity-advance holder.

▶CHOOSE: Temp. Range	Tip Size	Brand	Item No.

Red-Riter®

Flat Soapstones No. 5KH40

Markal UNIWELD SUPPLIER DIVERSITY

Welding Pencil, Markers & Soapstones

Welding Pencil And Markers— Use as an alternative to soapstone to create torch-resistant markings that will not rub, burn, or blow off. Reflective silver and red colors improve visibility when cutting or welding.

Soapstones—Produce highly visible layout lines on metal or concrete. Nos. 5KH41 and 5KH43 include holders with built-in sharpener and pocket clip.

Red Felt Pads No. 24A429

Nozzle-Kleen® Tools

Spatter Cleaning and Wire Lubrication Pads and Tools

WELD-AID

Lube-Matic®—Engineered to reduce tip and liner wear, burnback, and wire jams, and to promote smoother arc feed. Black felt pads are for all types of steel wire; pretreated with Lube-Matic liquid. Red felt pads are for cleaning all wire; excellent for aluminum. Liquid cleaner/lubricant helps reduce wire drag 60%.

Nozzle-Kleen®—Remove spatter from nozzles, tips, and diffusers, and clean torches without disassembly.

Welding Regulators

- Single stage

Victor®—Durable forged brass body and cap. Feature stem-type seat mechanism for accurate gas flow, and Delrin® cap bushing. Edge Series regulators have high contrast graphics, built-in gauge guard, and 5-yr. warranty.

Miller—Filtered Sure Seat™ filtered seats prevent contamination from entering the seating area, reducing repair costs and downtime. Made with a rugged forged brass body, nickel-plated bonnet, and neoprene composite diaphragm.

Harris—Feature an encapsulated 1-pc. PTFE capsule seat assembly with 10-micron filter. No. 5KZ42 has a forged brass body and cap, along with a stem-type seat mechanism, stainless steel diaphragm, and Delrin® insert bushing.

TurboTorch—Check pressure, test, and purge lines prior to brazing to protect joints against oxidation. Easy-to-read 2" gauges with forged brass body and housing cap. Gauges are marked with dual graduations, psig and kPa.

Uniweld®—Includes a polished chrome bonnet, easy-to-read 2" gauge, neoprene diaphragm, and heavy-duty stem-type seat-and-nozzle assembly.

High Purity Regulators

- 2½" gauge
- 2" body dia.

Encapsulated filtered seat design helps prevent contaminants from entering seating area, while the nickel-plated finish with brass/stainless steel barstock construction prevents outgasing. Stainless steel diaphragm. Built-in safety relief valve. Two-stage models provide precise pressure control of carrier gases or calibration mixtures used in chromatography or for thermal conductivity.

Flow Gauge and Flowmeter Regulators

Use for shielding gas with argon or CO_2 in MIG and TIG welding. Flow gauge regulators are for accurate measurement of gas flow. Flowmeter regulators incorporate flowmeter and regulator into one compact unit.

Performer Edge™
Series 2.0
No. 482W08

Cutting, Welding, and Heating Outfits

Medium and heavy duty outfits feature in-tip gas mixing technology and include torch mount flashback arrestors. Tag-A-Long™, Toughcut™, Versa-Torch™, and The Wurks® outfits include: torch handle, cutting attachment, cutting and welding tip, oxygen and acetylene regulators, twin welding hose, goggles, and striker.

Note: For more Consumables visit Grainger.com®.

CUTTING, WELDING, HEATING

Heavy-Duty—Combo outfits cut up to 8" and weld up to ½" with optional tips.

Journeyman®—Include cutting tip, heating and welding nozzles, ¼" x 20-ft. T-grade hose, goggles, striker, and tip cleaner. Nos. 54RZ72 and 54RZ75 have a CGA 300 connection, which uses a right-hand female thread on the regulator. Nos. 54RZ73 and 54RZ76 have a CGA 510 connection, which uses a left-hand male thread on the regulator.

Mastar® Maintenance—Lightweight, portable oxygen/acetylene outfits include a thruster air/acetylene tip and air/fuel adapter to convert welding handle for soldering with acetylene only, and eliminate use of oxygen. All outfits include industrial-grade regulators with easy-to-adjust T-handles, WH550 rear valve welding handle, welding tip, carrying stand or rolling cart for MC or B and R or R40 tanks (tanks not included), 12½-ft. twin hose, flint lighter, and goggles.

Medium-Duty—Cut up to 6" and weld up to ⅜" with optional tips.

The Wurks®—12-pc. kit for welding, brazing, cutting, and soldering tool box. All fuel gases are mixed in tip for maximum safety. Includes tip cleaner set with 12 sizes of cleaning wires and file and all-leather welding gloves. Packed in The Wurks Box with tray.

Toughcut™—Great for many applications, including farm, automotive, light fabrication, and hobby. Cut up to ⅝" and 6" with optional tips. Weld up to ⅛" and ⅜" with optional tips. Include reverse flow check valves.

Versa-Torch™—Versatile system has nickel-plated torch handle, cutting attachment, heat tip and carrier, and reverse flow check valve. Cuts up to ⅜" and 3" with optional tips. Welds up to ⅛".

CUTTING, WELDING

Journeyman® 450—Includes cutting tips and welding nozzle.

Performer Edge™ Series 2.0—Heavy-duty outfits cut up to 6" and weld up to ¼" with accessories. They include 2 regulators, cutting attachment, welding handle, welding nozzle, heating nozzle, tip cleaners, striker, T-grade hose, and goggles.

Tag-A-Long™—Portable and lightweight outfits feature Series 30 regulators and reverse flow check valves. Cut up to ⅜" and 6" with optional tips. Weld up to ⅛" and ½" with optional tips. No. 6GJG1 also includes oxygen and fuel regulator, oxygen and acetylene cylinders, and lighter. Acetylene regulator not included.

CUTTING, HEATING

Heavy-Duty Series—Torch and hand torch outfits cut up to 12" with optional tips.

TURBOTORCH

Portable Totes

Designed for HVAC and light fabrication applications, these portable outfits feature a molded, plastic carrying case with an ergonomic handle and balanced design for easy carrying. The built-in storage compartments help you keep your consumables and other accessories right at-hand. All include Oxygen regulator, fuel regulator, 12.5-ft. dual 3/16" hose, goggles, check valve, striker, and tank key.

Note: For the full contents of each outfit, go to Grainger.com® and search by Item No.

Miller UNIWELD SUPPLIER DIVERSITY

Brazing Outfits

QUICKBRAZE®

- Concentrated 6000°F flame

Provides pinpoint heat with precise flame control to repair leaks in sealed systems and other HVAC applications. Brazes from 1/2" to 1 3/8".

LITTLE TORCH™

Torches produce controlled, stable flames—from pinhead-small to large enough to silver-solder large objects—that are hot enough to melt commercially weldable metals, glass, and ceramics. Include an 8-ft. hose. Caddy Outfit No. 6GJG5 also includes a cylinder/torch caddy, acetylene and oxygen regulators, a pair of reverse flow check valves, an oxygen cylinder, and an acetylene cylinder.

CAP'N HOOK®

Lightweight, portable oxygen/acetylene outfits feature MTF #5 Cap'n Hook 5-flame tip. Complete with 71 front-valve welding handle, welding tip, oxygen and acetylene regulators, carrying stand, hose, flint lighter, and goggles. Nos. 22UL96 and 22UL97 include cutting attachment and cutting tip.

ACCESSORIES

Cap'n Hook Welding/Brazing Tips

Heat copper tubing to 5600°F with pinpoint accuracy. Fit Uniweld 71 and WH550 welding handles. 100% wrap-around heat.

Cap'n Hook Torch Kit

Instantly upgrades torch kit for micro maintenance work. Includes lightweight 71 welding handle for "A" hose connections, Cap'n Hook 5-flame tip which provides even distribution of heat for various tube brazing applications, and 2 high-performance Micro 6000 tips for pinpoint accuracy in tight places: MTW #2 for brazing or welding, and MTT flexible twin tip for brazing return ends without overheating adjacent brazed joints.

Flame Barrier

Provides a protective barrier between flammable surfaces and open flames. Has structural integrity up to 2300°F and a melting temperature of 3200°F.

Tuning Fork™ Tip

Helps remove and replace heat pump reversing valves without destroying original copper tube and fittings. Heats all fittings at once for easy removal. Fits Uniweld 71 and WH550 welding handles.

Spiral Tip Cleaners and Flint Lighters

High-quality, spiral tip cleaners quickly and easily clean out tip orifices. Rustproof, wires are stainless steel. Aluminum case features locked knot that secures small wires and includes hardened steel file. Tip cleaner data and drill reference size stamped on back of case. Flint Lighters safely and quickly ignite tips on torches and cutting attachments. Flints can be easily replaced.

Miller

Proportional Two-Gas Mixers

- Each serves up to 5 welding stations

These easy-to-use proportional gas mixers let you accurately blend your own custom TIG and MIG weld shielding gas mixtures (±2% of scale) for peak performance and optimal welds in a variety of different welding applications. Save money on stocking expensive premixed gases and eliminate stratification. Mixers also help you reduce set-up time by eliminating the need to change cylinders, flow control devices, or hoses when changing from one range of mixed gas to another. All models have a convenient chart on top which shows proper settings for argon/oxygen and CO_2/oxygen; No. 2CZN9 also shows settings for argon/CO_2. No. 2CZP1 shows all the same settings as No. 2CZN9 (except for CO_2/oxygen), and also for argon/helium and nitrogen/hydrogen.

Gas Type	Flow Rate	Inlet/Outlet Connec.	Outlet Pressure Without Flow PSIG/Bar	Adjustment % Range	Item No.

Flashback Arrestors
No. 5KJ54

Flashback Arrestors, Quick Disconnects, and Check Valves

Flashback Arrestors—Built-in check valves prevent reverse flow of gases.

High Flow Regulator Flashback Arrestors—Thermal shutoff positively shuts off gas and can be used on all sizes of Harris tips.

Quick Disconnects—Feature automatic gas shutoff.

Check Valves—If reverse gas flow starts, valve closes immediately for total shutoff.

Welding Hose and Reels

WELDING HOSE

Heavy-duty cover resists the deteriorating effects of oils, acids, alkalis, and other liquids. 9/16"-18 UNF 2B thread fittings.

WARNING: The use of certain fuel gases may damage welding hose and lead to fires and explosions.

Westward® Gemini Grade R—Made high-tensile spiral-reinforced EPDM tube. Color-coded lines: green (oxygen) and red (acetylene).

Westward® Gemini Grade T—Oil-resistant Chemivic™ cover provides abrasion resistance in extreme conditions.

HOSE REELS

Reels feature permanently lubricated bearings and a corrosion-resistant powder-coated finish. Spring-drive reels have a vibrationproof, self-locking latch.

Reelcraft models have grade T seals and twin line hoses that meet RMA/CGA Type V.D. grade T specifications for flame resistance and burst strength. Coxreels® models have an adjustable guide arm, external fluid path, dual-ported brass swivel and Viton® seals.

Air/Acetylene Soft Flame Kit No. 5KH21

Air/Acetylene Twister® Kit No. 5KH08

Quick-Connect Tip Set No. 5KH22

HVAC, Plumbing, and Maintenance Air/Gas Kits

Air/Acetylene Soft Flame Kit—No. 5KH21 gives precise 2700°F target heat and fast heat transfer making this ideal for soldering copper tubing. Screw-connect handle has easy access rear control valve. Includes RB acetylene regulator, S23 soft flame tip, TH3 screw-connect handle and H12 12½-ft. acetylene gas hose.

No. 5KH29 includes S21, S22, S24, S25, S26, and S27 tips that fit No. 5KH21 (Uniweld K37) and most screw-connect air/gas torch handles.

Air/Acetylene Twister® Kits—For brazing and soldering copper tubing in maintenance and HVAC applications. Kit includes RB acetylene regulator, TH6 quick-connect handle, A-3 and A-11 Twister tips, H12 12½-ft. acetylene hose, and 502 stand.

No. 5KH22 tips fit most quick-connect air/gas torch handles. Includes A-5 and A-8 sizes to extend No. 5KH08 Air/Acetylene Twister Kit's brazing and soldering capabilities.

Sludge Remover Kits

Sludge Sucker®—Uses compressed gas to create suction that pulls sludge from condensate lines.

Sludge/Clog Blasters—Sludge Blaster uses compressed air to expand inside drain lines with ¼" hose connection. Clog Blasters use water from a standard ¾" garden hose. Plug adapter kit uses compressed air to flush drains after unclogging.

Nitrogen Sludge Sucker® Kits—Both kits include Sludge Baster®, Sludge Sucker, nitrogen regulator, vinyl hose, 2-ft. and 5-ft. service hose, and blowgun.

No. 5KH03 also includes 5-ft. vacuum hose, 40-cu.-ft. empty tank, and carrying stand.

No. 5KH04 comes with air chuck, ½" and ¾" rubber plugs, and needle tip.

Description	Mfr. Model	Item No.
Sludge Sucker®		
¾" PVC, Use w/All Lines	40000	**2CZW1**
Sludge/Clog Blasters		
Sludge Blaster, Pipe Capacity of ¾" to 1" ID	40061	**2CZW2**
Clog Blaster, Pipe Capacity 1" to 2" ID	40062	**2CZW3**
Clog Blaster, Pipe Capacity 1.5" to 3" ID	40063	**2CZW4**
Clog Blaster, ¾" Garden Hose	40064	**2CZW5**
Plug Adaptor Kit	40080	**2CZW6**
Nitrogen Sludge Sucker® Kits		
Sludge Maintenance Kit	40040U	**5KH03**
Sludge Maintenance Kit	40055	**5KH04**
Empty Fuel Cylinder, Empty 40 Cu Ft, CGA 580	N40	**2CZW8**

Propane No. 5UX34

Fuel Cylinders

No. 2YMW5 has left-handed threads. Nos. 2YMW6 and 5UX34 have CGA 600 valve with right-handed threads.

Flame Type	Fuel Capacity	Item No.
Oxygen	1.4 oz.	**2YMW5**
MAP-Pro	14 oz.	**2YMW6**
Propane	14 oz.	**5UX34**

SMALL PART, BIG PROBLEM

Your job just got easier. Whether it's routine maintenance or an emergency repair, our repair parts center has the parts you need to get back on the job.

Teflon Squeeze Bottle
No. 35RP17

General Purpose Lubricants

Reduce friction and wear, and prevent machinery from overheating. They leave a slippery coating on two surfaces to keep moving parts like wheels, hinges, and gears moving smoothly and extend the life of equipment. They also provide some protection against water damage, contaminants, and corrosives.

Series	Container Size	Lubricant Base	Primary Additive	NSF Rating	Operating Temp. Range	Lubricant Color	Odorless	Flammability	Item No.

Cable & Wire Pulling Lubricants

- Nonflammable
- Nonconductive
- Nonstaining
- Not NSF rated
- Not odorless

These lubricants are applied to wire or cable so they can be pulled smoothly through long conduit runs or runs with many bends. They reduce friction and pulling tension, so they save time and minimize damage to wire insulation and cable jackets, which prevents performance issues. They're safe for use on most plastics, but they should be tested on a small area first.

Electrical Lubricants

- Flammable
- NSF rated H2 for no food contact
- No additives

Protect electronic components against moisture damage and corrosion that can cause an electrical malfunction. They also clean components, loosening corrosion or whisking away moisture. These lubricants have an amber color and have a petroleum distillates base.

Series	Container Size	Operating Temp. Range	Item No.

Sprayon Pail
No. 30WK33

Belt Dressing Lubricants

- Flammable
- Not odorless
- No additives

Prevent belts in machinery and equipment from hardening and accumulating dirt, which reduces wear and tear and increases belt life. They are ideal for flat, round, or V-shaped belts in leather, rubber, or canvas.

Series	Container Size	Lubricant Base	NSF Rating	Operating Temp. Range	Lubricant Color	Item No.

Trolley Lubricants

- Colorless
- Odorless
- No additives

Prevents bearings from sticking in overhead conveyors and chains. It leaves a film on overhead trolley chains commonly found in meat, poultry, and fish-processing plants. It remains fluid at low temperatures and won't wash off equipment with water.

Series	Container Size	Lubricant Base	NSF Rating	Operating Temp. Range	Flammability	Item No.

Sugar-Dissolving Lubricants

- Colorless
- Odorless
- No additives

Used in food and beverage facilities to remove sugar and fondant from equipment. They leave a light, durable film on conveyor, cutter, and fastener surfaces while providing short-term corrosion resistance.

CRC ECHO MAG 1 Makita RENEWABLE LUBRICANTS

Chainsaw Lubricants

Typically formulated with a tack additive to help them stick to the saw's chains and blades (sometimes called guidebars). These lubricants reduce friction between the moving parts to prevent damage caused by locking up, excessive heat, or buildup. They're applied to the chain and penetrate the pins, bushings, and blades.

Penetrating Lubricants

Loosen fasteners or bolts that are stuck or frozen in place so they can be removed or separated. They seep into crevices or small spaces between threaded parts to release them. They can displace moisture and prevent corrosion between fasteners. Penetrating lubricants evaporate more quickly than other lubricants, so they are better used for short-term lubrication.

Marine Grade Anti-Seize

- Nonflammable
- Not NSF rated
- Odorless
- No additives
- Water resistant

Can withstand exposure to fresh and salt water without washing out and prevents components from corroding or locking together. This anti-seize is metal-free to prevent water and ground contamination.

Heavy-Duty Anti-Seize

- Not NSF rated
- Not odorless
- Conductive

Formulated with graphite and molybdenum (moly) to withstand extreme temperatures and pressure. It's commonly used in manufacturing, milling, and mining facilities to keep fittings and flanges from locking together.

Nuclear Grade Anti-Seize

- Nonflammable
- Not NSF rated
- Not odorless
- Conductive

Used in nuclear, chemical, and pharmaceutical plants to prevent components in reactors, steam generators, turbines, and other equipment from sticking and seizing. Nuclear grade anti-seize has very low levels of halogens, sulfur, nitrates, nitrides, and low-melting metals, so it can be used in applications that require high purity.

Mold Release

Applied directly to molds to create a barrier that prevents materials from sticking to them. This allows the casted product to be released without damage to the mold or the product, so it increases the life of the mold, improves the final product's finish, and reduces production times.

Cleaners

CRC®

Duster™ Aerosol Dust Removal System—Powerful blast removes dirt, dust, and embedded debris on energized equipment. Nonflammable and safe on all plastics.

Gasket Remover—Solvent-based cleaner removes baked-on fiber gaskets, gasket adhesives, and sealants. Excellent on paint and varnish. Contains no methylene chloride.

Graffiti Remover—Gel cleaner removes or helps clean multilayered or painted-over graffiti, paints, pen marks, crayon, ink, lipstick, scuff marks, lacquers, and varnishes.

HydroForce® Butyl-Free Cleaner—Water-based formula is safe to use on most plastics. 10.5 to 12.2 pH. Low VOC content.

HydroForce® Foaming Citrus Cleaner—Clings to tough stains on vertical or inverted surfaces. Water-based formula is safe on all plastics. 10.9 pH.

HydroForce® Germicidal Foam Cleaner—Effective against HIV, staph, salmonella, and other bacteria. Leaves no residue; water-based. 11.8 to 12.8 pH.

HydroForce® Zero VOC Cleaners—Remove dirt, grease, and oil. pH 10.25. Plastic-safe, water-based formula.

HydroForce® Glass Cleaner—Ammonia-fortified, water-based formula with nonstreaking foaming action. 10 to 10.5 pH.

HydroForce® Stainless Steel Cleaner and Polish—Eliminates fingerprints and watermarks, leaving a protective, nongreasy barrier. Water-based formula. 10.55 pH.

LPS®

BFX All-Purpose Cleaner—Dye-free water-based cleaner is designed to remove dirt, grease, and oil. Not for use on magnesium. 11.8 pH.

FOODLUBE Sugar Dissolving Fluid—Removes sugars and fondants from surfaces. Lubricating film helps prevent new sugar deposits and provide short-term corrosion protection on metal surfaces. DETEX® container plastics are metal- and x-ray-detectable.

WorkPlace Hand Cleaner Towels—Waterless, deep cleaning, and nonscratching 1-step hand cleaner towel. Quickly removes embedded grime. Residue-free.

RENEWABLE LUBRICANTS™

RLI Food Grade™ Cleaner—Water-based, water soluble detergent is a biodegradable cleaner/degreaser that is safe for food processing plants and environmentally sensitive areas.

SPRAYON®

CD887 Coil and Fin Cleaner—Water-based, foaming cleaner for use on refrigeration and A/C coils. Nonflammable and noncorrosive. Safe on all metals.

Liqui-Sol™ Cleaners—CD880 General Purpose Cleaner is safe for metal, finished wood, porcelain, vinyl, leather, and laminated surfaces. CD885 Stainless Steel Cleaner cleans, polishes, brightens, and protects metal surfaces.

TRIM®

CLEAN 2430—Mild pH parts washing compound and corrosion inhibitor for multi-metal applications.

Task 2™ Grime Fighter—Nonbutyl, industrial metalworking surface cleaner can be diluted up to 100:1.

Multipurpose Degreasers

- Ready-to-use

CRC® HydroForce® All Purpose—Water-based, low-foaming formulas remove grease, oil, and dirt. Safe on most plastics.

LPS® Industrial Strength—Water-based formula removes grease, oil, sludge, soot, ink, coffee, and other soils.

Renewable Lubricants™ Bio-Soy Orange™—Highly concentrated, nonfoaming cleaner/degreaser removes stubborn stains, greases, oily dirt, road grime, tar, glue, mildew, tree sap, and wax. For military, industrial, transportation, marine, agricultural, and residential use.

Sprayon® CD 1275 Heavy-Duty Degreaser—Lemon-scented, no-rinse cleaner/degreaser removes dirt, grease, soap scum, crayon, smoke film, and heel marks.

WD-40® Specialist® Machine & Engine—Quickly removes grease, oil, dirt, and grime from machines and engines. Sprays up to 5 ft.

Natural Citrus-Based Degreasers

- Ready-to-use

CRC®

Citrus Degreaser—D-limonene-based cleaner/degreaser dissolves and removes grease, oil, lubricants, and other contaminants. Noncorrosive, nonabrasive, no residue.

Citrus Degreaser MUO—For dissolving and removing grease, oil, lubricants, and contaminants without requiring water to wash off and without leaving a residue.

HydroForce® Super Citrus™—Dissolve grease, oil, ink, grime, and adhesives. Water-based and can be diluted with water. 10 pH (aerosol).

Natural Degreaser™—Contains no Class I or Class II ozone-depleting chemicals or chlorinated solvents. Dielectric strength: 28,600V.

LPS®

PreSolve® Orange—Ideal for removing grease, tar, and oils. Flash point above 100°F. Low residue formula is safe on all metals and most plastics.

PF® Solvent—Full-strength solvent removes grease and oil and can be use in parts washers, dip tanks, and ultrasonic cleaners. Contains no chlorinated solvents.

SPRAYON®

CD™ 757 Heavy-Duty Citrus Degreaser—Removes dirt, grease, oil, and graffiti.

Solvent-Based Degreasers

- Ready-to-Use (RTU)

CRC®

Cable Clean®—Combines a high-voltage splice and termination cleaner with a nonchlorinated, industrial-strength degreaser.

Chlor-Free®—Heavy-duty nonchlorinated degreaser/solvent provides rapid turnaround where low-flashpoint solvents can be used. Use caution on plastics.

Fast Dry—Heavy-duty, nonchlorinated degreaser/solvent removes oil, grease, and other contaminants from electrical equipment. Provides rapid turnaround where low-flashpoint solvents can be used. Use caution on plastics.

Heavy-Duty Degreaser—Degreaser/cleaner dissolves grease, oil, and sludge. Nonconductive, noncorrosive, nonstaining solvent-based formula.

Heavy Duty Degreaser II—Cleans surfaces without residue buildup. Use caution on plastics. Nonchlorinated.

Insta-Solv®—Nonchlorinated, noncorrosive degreaser aggressively dissolves grease, dirt, and oils from most nonplastic surfaces. VOC levels meet SCAQMD requirements.

Lectra Clean®—Quickly evaporates, no residue. Nonstaining. Dielectric strength: 50,500V. VOC-free formula.

Lectra Clean® II —Zero VOC, low-odor formula cleans surfaces without residue buildup. Nonchlorinated VOC-free formula.

Quick Clean™—Degreaser/solvent evaporates quickly and without residue. Nonflammable formula should be spot-tested before use on plastics and paints.

Super Degreaser™—Degreaser/cleaner is a nonchlorinated alternative to 1,1,1-trichloroethane. Nonstaining, nonconductive, and residue-free.

T-Force®—Quickly dissolves grease, oil, and sludge. Noncorrosive, nonstaining, and nonconductive.

LPS®

A-151—Removes oil, grease, and other contaminants in dip tanks, parts washers, and ultrasonic cleaners.

G-49™ Orange—High solvent strength for removing grease, grime, oil, and adhesives from cleaning equipment. Leaves no residue.

EFX®—Fast-acting, heavy-duty solvent degreases and cleans in a single operation. Leaves no residue. Ideal for cleaning metals and most plastics.

EVR™ Clean Air—Cleans metals with no ozone-depleting compounds.

HDX Heavy-Duty—Nonflammable, nonconductive, fast-acting formula removes oil, grease, wax, dirt, moisture, tar, and other contaminants.

Instant Super Degreaser—Nonflammable, nonconductive, fast-evaporating degreaser/cleaner cleans grease and oil from all metals.

ZeroTri®—Fast-acting, heavy-duty degreaser.

SPRAYON®

EL™ 749 Electrical—Heavy-duty cleaner removes dirt, oil, grease, wax, and tar from nonenergized electrical equipment. No residue.

EL™ 848 Flash-Free Electrical—Electrical cleaner/degreaser penetrates instantly to remove dirt, oil, grease and wax. Nonflammable and noncorrosive. Evaporates quickly and leaves no residue.

EL™ 2846 Nonchlorinated Electrical—Nonflammable degreaser/cleaner removes dirt, oil, grease, and wax. Safe on ferrous and nonferrous materials and most plastics.

Contact Cleaners

- Ready-to-use

CRC®

Dry quickly, leaving no residue. Safe on most plastics.

Contact Cleaner 2000®—Removes contaminants. Not recommended for use on Noryl® or polycarbonate plastics. Nonconductive and noncorrosive.

Contact Cleaner 2000® VC Precision—Evaporates quickly with no flash or fire point. Alternative to 141b-based cleaners.

Cable Clean®—Removes contaminants from the semiconductive core of high-voltage cables during splicing and termination. Nonflammable, noncorrosive, nonconductive, and nonstaining.

Contact Cleaner—Precision cleaner is nonflammable, noncorrosive, nonstaining, and nonchlorinated.

Contact Cleaner and Protectant—Penetrates surface pores, cleans away contaminants, and leaves a microscopic, corrosion-resistant silicone film. Noncorrosive and nonstaining.

CO® Contact Cleaner—Cleaner is nonflammable, noncorrosive, nonstaining, and nonchlorinated.

HF™ Contact Cleaner—Precision cleaner is made of petroleum distillate.

Isopropyl Alcohol Precision Cleaner—Removes polar soils and other charged contaminants. Nonconductive and noncorrosive.

NT™ Precision Cleaner—Nonflammable, nonconductive, and noncorrosive. Alternative to HCFC-141b cleaners.

QD® Contact Cleaner—Petroleum distillate/alcohol blend removes soil and other contaminants from electronic components. For lower flashpoint applications.

XT-2000™ Precision Cleaner—Removes contaminants from electronic equipment. Nonflammable, nonconductive, and noncorrosive.

Electronic Component Cleaner—No flash or fire point. Evaporates rapidly, leaves no residue.

Electric Parts Cleaner—Fast evaporation, leaves no residue. Nonflammable, noncorrosive, nonconductive, and nonstaining.

Lectra Force™—Emits lower VOCs and has no flash or fire point. Nonconductive, noncorrosive, and nonstaining.

LPS®

CFC Free Electro—Fast drying, leaves no residue. Safe on plastics.

CFC Free NU—Cleaner and degreaser is for electrical/electronic parts. Fast drying, leaves no residue. Safe on plastics. Nonconductive.

Electra-X 2.0—For use on or near energized electronic equipment. Fast evaporating. Nonflammable and nonconductive.

Electro—Fast-evaporating cleaner is for electronic and fine parts. Safe on plastics. Nonflammable.

Electro-140°—Superior wetting and penetrating action, leaves no residue. Safe to use on plastics. Nonconductive.

Micro-X—Fast-evaporating, leaves no residue on delicate electrical and electronic parts. Safe on plastics.

Micro-X NU—Quickly removes contaminants from electronic and fine parts. Safe on plastics.

NoFlash® Electro—Nonflammable solvent blend removes containments from the internal components of electronic or precision equipment.

NoFlash 2.0 Electro—For contacts, controls, and circuit breakers. Fast evaporating, requires no rinsing. Nonflammable, nonconductive, and nonbrominated.

REVO 66—Dries quickly, leaving no residue. Nonconductive and nonbrominated. Alternative to HCFC-based cleaners.

SPRAYON®

EL2020 Plastic Safe—Fast-evaporating, leaves no residue. Safe on all metals and most plastics, and can be applied while equipment is operating. Nonflammable. Alternative to TF113.

EL2206 Electro Wizard™—Removes, dissolves, and rinses away foreign contaminants. Safe on all plastics. Alternative to HCFC-141b.

EL2302—Quickly dries, cleans sensitive equipment and precision instruments, leaving no residue. For use on nonenergized equipment. Safe on most plastics. Alternative to TF113 and HCFC-141b.

EL2001—Electrical cleaner/lubricant removes contaminants from high-precision electrical equipment, leaving a microscopic corrosion-proof film. Dielectric strength: 36,700V.

WD-40® SPECIALIST®

Contact Cleaner—Removes dirt, oil, flux residue and condensation away from sensitive electronics and electrical equipment. Dries quickly, leaving no residue.

Multipurpose Greases

CRC®

General Purpose—For bearings and on cables, chains, latches, machinery, open gears, and overhead door tracks.

CITGO

Premium Lithium EP—Lubricates journal and antifriction bearings.

Lithoplex® MP—Helps minimize wear in heavily loaded components. Offers corrosion and oxidation resistance.

Lithoplex® CM and HM—Provide wear protection in construction and mining applications. Polymer-fortified for improved adhesion and water resistance. Lithoplex CM has 3% MoS_2. Lithoplex HM has 5% MoS_2.

Lithoplex® RT—Tacky, moly-free formula provides good adhesion and water resistance.

JET-LUBE®

MP-50™ Moly Paste—Lead-free, water-resistant low-friction grease helps prevent corrosion.

Temp-Guard™—Contains graphite and molybdenum disulfide for low friction and extreme pressure capabilities.

MOBIL™

Mobilith® SHC 220—Lubricates at temperature extremes; rust-, corrosion-, and oxidation-resistant.

Mobillith SHC™—No. 4ZF48 is for extreme pressure applications. No. 4ZF49 is for grease-lubricated rolling-element bearings in electric motors.

Mobilgrease® XHP 222—Provides lubrication and oxidation stability plus rust, corrosion, and water resistance. Use for automotive, construction, marine applications and farm equipment.

Mobilgrease® XTC—Resists oil separation in high-speed flexible gear and grid coupling applications.

Mobilux® EP 1 and 2—EP 1 can be pumped at low temperatures. EP 2 is recommended for antifriction and plain bearings, bushings, and pins under normal operating conditions.

WD-40® SPECIALIST®

High Temperature—For high-speed bearings in high-temperature applications with heavy mechanical loads.

Extreme Pressure—Offers protection against wear and high loads in heavy-duty applications.

Marine Grade Water Resistant—For moisture and corrosion protection for equipment that's exposed to the damp weather conditions.

B'LASTER

Penetrating Grease—Penetrates rust and corrosion to lubricate and protect metal surfaces. For use in agriculture, construction, mining, and automotive applications.

Heavy-Duty Grease—Protects and lubricates in temperatures up to 500°F. Great for automotive, construction, mining, and farm equipment.

Waterproof Marine Grease—Provides protection, even with extended exposure to saltwater and saltwater mist.

Extra-Tacky Red Grease—Provides anti-wear and extreme pressure protection, in temperatures up to 550°. Rust- and -corrosion resistant.

Pro-Grade Multipurpose Grease—Water-resistant formula provides lubrication under moderate loads. Protects against rust and corrosion.

SUPER LUBE®

O-Ring Silicone Grease—For lubricating, sealing, and conditioning O-rings and other regulator and valve system components.

Food Grade Multipurpose Greases

CRC®

Greases—No. 4JB56 is formulated on a premium aluminum complex base. No. 12G584 has a smooth, buttery texture and is a premium-grade aluminum complex grease. No. 12G587 is plastic-safe and particularly useful in high-temperature applications. Extreme Duty No. 12G591 is a plastic-safe grease with excellent water-washout resistance.

JET-LUBE®

FMG™—Food Machine Grease is formulated for a wide variety of operating conditions, with extreme water resistance to stay in place even after frequent washdowns. Polymer additives provide adhesive and cohesive strength to resist pound-out under shock loads. It is recommended to lubricate all types of bearings in food processing machinery.

MOBIL™

Mobilgrease™ FM 222—High-performance multipurpose formula is designed to lubricate food processing machinery in varied environments, from oven to freezer operations, and over a wide range of speeds and loads. The grease withstands periodic washdown and cleaning operations, with excellent water resistance and rust inhibition and good protection against wear and shock loads.

PETROCHEM® FOODSAFE®

PETRO-GARD® FMG-2—Formulated with special additives selected to provide excellent water, oxidation, and corrosion resistance, plus corrosion prevention and excellent antiwear and extreme-pressure (EP) properties. The product stays in place between washdown cycles to help boost equipment and lubricant life in wet conditions.

SYN GEL FG-750—High-temperature gel grease seals bearings against water and other contaminants and provides corrosion protection. It remains stable under high shear and high temperatures, and will not melt, drip, carbonize, or emulsify. The lubricant is highly water-resistant and performs exceptionally well in wet applications.

STA-LUBE®

Super White™ Multipurpose—High-purity greases provide superior performance in any weather and most temperatures. Bright white color is great where appearance is important.

SUPER-LUBE®

Multipurpose Grease with Syncolon® PTFE—Heavy-duty lubricant is made with proprietary Syncolon PTFE micropowders combined with synthetic base fluids for longer lasting protection against friction, wear, rust, and corrosion. Designed to help reduce downtime, increase productivity, and extend machinery life. The formula has good mechanical stability, won't melt or separate, and does not evaporate or form gummy deposits.

Silicone Lubricating Compound with Syncolon® PTFE—Synthetic grease offers excellent water protection and moisture barrier over a wider operating range than petroleum-based lubes. It's good for plastic gears and threads and as a damping medium for dash pots. Also lubricates O-rings, electrical motor and slow-speed bearings, brake parts, weather stripping, trunk seals, speedometer cables, window channels, hood strips, pads, rubber gaskets, and other rubber components.

TRI-FLOW®

Synthetic Grease with PTFE—Compatible with most rubbers and plastics; excellent for O-rings. Nonstaining and waterproof. Pure synthetic provides added durability and performance.

Bearing Grease

- Grease container: Cartridge

MOBIL™

Polyrex™ EM—Super-premium grease is formulated for electric-motor bearings, particularly vertically mounted bearings or very large motors that may require stiffer grease consistency.

LPS® THERMAPLEX®

Multipurpose—For use as a high-performance, multifunctional bearing grease in general purpose applications.

Hi-Temp—Resists carbonization, vibration, and bearing failure. Extends relubrication intervals. Excellent resistance.

Hi-Load—Provides long-lasting lubrication for bearings subjected to shock loading and vibration. Offers antiwear properties and corrosion resistance.

Aqua—Provides long-lasting lubrication even when fully submerged in fresh or salt water.

FoodLube—Nonstaining, nonemulsifying formula for use in food processing and other clean industries.

CS Moly—Calcium sulfonate formula with molybdenum disulfide for high load carrying capacity. Reduces wear from vibration. Water- and corrosion-resistant.

JET-LUBE®

EP—Bearing grease contains an extreme-pressure additive that enhances shear stability in high temperatures.

STA-LUBE®

Sta-Plex™ Extreme Pressure Grease—Multipurpose, lithium complex formula contains extreme pressure, anti-oxidation, and anti-wear additives. For high temperature applications and for use in ball and roller bearings and in assembly/machining equipment.

Dielectric Grease

CRC® Dielectric Grease—Food-grade noncuring silicone compound waterproofs electrical connections and components to protect against arcing. No. 2F136 features Perma-Lock® integrated actuator that will not detach.

Jet-Lube® Silicone Compound DM™—Moisture-proofing sealant and lubricant's low volatility, inert properties, and high dielectric strength are good for use on a wide range of elastomers and plastics. It can serve as a lubricant, sealant, or chemical barrier coating for valves, O-rings, stuffing boxes, and vacuum and pressure systems; great to insulate electrical connectors against the elements.

Jet-Lube® MP (Moisture-Proofing) Silicone Grease™—Nonconductive premium moistureproofing lubricant is useful in a wide variety of applications, and a great insulator to protect electrical connectors against the elements. It is excellent on marine, automotive, and aircraft ignition systems, as well as electrical assemblies, cable and spark plug connections, and battery terminals. The formula is designed for compatibility with O-ring materials including Buna-N, Viton® FKM, HSN (hydrogenated nitrile), Teflon® PTFE, and nylon.

Loctite® LB 8801 Silicone Lubricant—Noncuring. Seals, waterproofs, and electrically insulates metal, rubber, and plastic parts. Can also be used as a mold release agent.

Super-Lube® H1 Food Rated Dielectric Grease—Noncuring synthetic compound lubricates, seals, and protects electrical components and connectors including battery cables, spark plugs, distributor caps, terminal strips and disconnects, and cable connections. Compatible with most plastics and rubber, it helps moistureproof and insulate electrical connections, offers corrosion prevention, and helps keep contaminants out.

Super-Lube® H1 Food Grade Multipurpose Grease—PTFE-based formula provides friction, wear, rust, and corrosion protection. This grease will not run, drip, melt or separate.

Aerosol Spray Multipurpose Greases

CRC®

Red Grease—Aluminum complex-based formula prevents rust, corrosion, and oxidation; maintains lubricity at extremely high temperatures. Long-lasting waterproof film resists acids, alkalis, salt, weather, and steam.

Food Grade White Grease—Features Perma-Lock® integrated actuator. Formulated for high-load applications requiring long grease life. Protects against wear, rust, and oxidation.

White Lithium Grease—Formula offers superior lubrication and durability in any weather. An excellent bearing break-in lube and a general purpose lube and corrosion inhibitor for tools, machinery, equipment, guide rails/tracks, hinges, latches, chains, and cables.

Heavy-Duty Clear Penetrating Grease—High-tack gel resists throwoff and water washout. Forms a thick, long-lasting waterproof film that resists acids, alkalis, salt, oxidation, weather, and steam.

LPS®

White Lithium with PTFE—Ultra-white lithium-based aerosol grease has PTFE additives for superior lubricity.

Red and Redi—Bentonite clay-based grease offers high temperature performance and corrosion resistance.

SPRAYON®

LU™100 White Lithium Grease—High-solids, nonmelting formula provides excellent metal-to-metal lubrication and is an excellent corrosion inhibitor for unpainted metal. The spray-on grease features great cling for overhead applications.

TRI-FLOW®

Synthetic Grease with PTFE—Premium formula is nonstaining and helps prevent corrosion on gaskets, O-rings, conveyors, sterilizer chains, slides, pool equipment, electric motors, water filters, and universal joints.

WD-40® SPECIALIST®

Protective White Lithium Grease—Liquid formulation sprays on evenly, then sets dry to form a thick, nonmelting coating that's great for metal-to-metal applications where heavy-duty lubrication and protection against rust and corrosion are required. Long-lasting, freeze-resistant lube won't run off in any weather. Good for outdoor and indoor applications, and on equipment being prepared for storage.

B'LASTER

Food-Grade White Spray Grease—Clean, low-odor grease protects against rust, moisture and oxidation in a range of applications, including food processing and food handling. Formulated for heavy-load applications. NSF H1 registered.

Penetrating Lithium Grease—Time-release formula penetrates existing rust and corrosion and provides long-lasting lubrication and surface protection. Great for restoration projects and various agriculture, construction, and automotive applications.

White Lithium Multipurpose Grease— Low-friction lubrication creates a protective barrier, protecting against moisture and oxidation. Grease helps keep surfaces lubricated in extreme temperatures.

ExxonMobil

Gear Oils

MINERAL

Mobiltac™ MM

Non-diluent formula features extreme pressure additives, providing protection of gear teeth and metal surfaces subject to extremely heavy loads. Oil forms a cohesive and adhesive lubricating film that resists wear, water wash, and excessive "throw off". For use in applications such as open gears, hoist gears, swing gears, and large press gears.

Mobilgear™ 600 XP

Provide heightened protection against micropitting, debris denting, and bearing wear in enclosed gear drives with circulation or splash lubrication systems.

Mobil™ 600 W Super

High-performance, high-viscosity oil is designed for use in enclosed worm gears operating at moderate to high speeds and temperatures. Provides good sealing film around rods and in glands in steam applications. Resists deposit formation. Excellent antiwear and low friction properties.

SYNTHETIC

Mobil SHC™ 600

Provide equipment protection at high and low temperatures, allowing peak productivity performance. Formulated for oxidation stability, corrosion and rust prevention. High performing oil in water separability, foam control, and air release. Run 20% cooler than conventional oil, limiting power consumption and reducing maintenance cost. For use in enclosed gears, speed and gear reducers, and plain and roller bearings.

H1 RATED

Mobil SHC Cibus™ Series—Food-grade synthetic oils feature high viscosity and load carrying capability, excellent oxidation stability and water separation, good seal compatibility and corrosion protection, and low traction coefficient.

Petrochem® Foodsafe FG Series—Semisynthetic gear lubricant for gearboxes operating under low and high temperatures.

Petrochem® Foodsafe Gearsyn FGG Series—For gearboxes and enclosed gears under low or high temperatures and humidity. Provides a protective antirust film for gaskets or seals of tank closures.

H2 RATED

Petrochem® Gearsyn EP 220—Ideal for heavily loaded low-speed gears and bearings with boundary or elasto-hydrodynamic lubrication conditions such as in mine hoist gear reducers. Also for gearboxes which operate under excessively high temperatures.

Renewable Lubricants™ Bio-Food Grade™—For gear drives and right-angle gear drives.

- NSF H1 Rated

Note: Food Grade Ratings are determined by the National Sanitation foundation (NSF), these values include H1 (Acceptable for incidental food contact), H2 (not acceptable for any contact with food), and H3 (edible/soluble).

CRC®—Formulated with USP-grade white oils which meet the requirements of demanding hydraulic systems.

Mobil™ DTE FM 32—Highly refined mineral oil is treated to remove color bodies. Will not stain or discolor material it contacts.

Petrochem® Foodsafe FMO Series—White oil base stocks is fortified to provide protection against corrosion, wear, and oxidation. For use with hydraulic systems, pneumatic lubricators, light-duty air compressors, chains, bearings, vacuum pumps, blowers, and slideways.

Petrochem® Foodsafe Hydraulic FG Series—Semisynthetic blend fluids feature EP wear protection and good demulsibility. For high-pressure hydraulic, cooler conveyor, circulating, and air compressor systems in food processing and air line applications.

ExxonMobil

Hydraulic and Circulating Oils

HYDRAULIC OILS

DTE™ 24, 25, and 26—Antiwear industrial oils meet the requirements of all conventional and high-output hydraulic systems. Operate in a wide range of temperatures while handling heavy loads. For hand- and power-operated jacks, scissor jacks, and hand pumps.

DTE 10 Excel™—Excellent keep-clean, antiwear performance and deposit control. Nonzinc formula is compatible with zinc-containing hydraulic fluids. Excellent protection against rust. Controlled demulsibility to work with small amounts of water and separate out large quantities. Multimetal compatibility.

EAL 224H—Recommended for most hydraulic systems requiring readily biodegradable, nontoxic fluids.

Aero™ HFA—For aircraft systems that require hydrocarbon-based hydraulic fluids. Features high viscosity index with excellent low-temperature properties and good chemical and oxidation stability.

CIRCULATING OILS

DTE™ Light, Medium, Heavy Medium, and Heavy—Contain oxidation inhibitors to resist thermal degradation and defoamants to ensure entrained air is released. Demulsibility permits water and other contaminants to separate. For bearings, gears, hydraulics, selected vacuum pumps, and air compressors.

DTE™ Extra Heavy—Formulated for extremely high chemical and thermal stability, rapid and complete separation from water, and high resistance to emulsification. For steam and hydro turbines, including geared turbines.

No. 4ZF13

Spindle Oil
No. 4F974

Machine Maintenance Oils

ExxonMobil

Way Oils—Dual-purpose hydraulic and way oils are recommended when extreme precision or slow speeds make it necessary to eliminate stick-slip or chatter. Approved by major machine tool builders such as Cincinnati Milacron, Okuma, and Bijur. Minimize wear. Good coolant separability extends oil life.

Spindle Oils—Light-bodied, light-colored oils offer long service life and excellent antifoam and rust protection. Resist oxidation and deposit formation. For high-speed spindle, plain, and antifriction bearings in textile machines, precision grinders, and other machine tools. Effective lubrication at high speeds. Approved against Cincinnati Milacron P specifications.

ExxonMobil CRC 3-IN-ONE RENEWABLE LUBRICANTS

Air Tool Oils and Lubricants

Almo 525 Air Tool Oil—Pneumatic rock drill and tool lubricant formulated to provide a balance of adhesiveness, yet emulsifiable enough to pick up moisture carried in oil stream.

Sta-Lube® Air Tool Oil—Reduces rust, varnish, sludge and acids. Increases torque on pneumatic equipment.

Pneumatic Tool Oil—Quickly removes gum and sludge. Waterproof formula lubricates, protects, and prevents rust.

Bio-Air Tool™ and Bio-Food Grade™ Air Tool Lubricants—Designed for use with rotary and reciprocating air tools.

CRC® LPS® Sprayon® TRI-FLOW™

Food Grade Machinery Oils

- NSF H1 Rated

CRC®—General-purpose lubricant is silicone-free, virtually odorless, and colorless. Will not harm metal, wood, plastic, or painted surfaces. Zero VOC. The Perma-Lock® integrated actuator will not detach.

LPS® with DETEX®—Features metal-detectable plastic components with DETEX®. Colorless, odorless, nonstaining oil loosens nuts and bolts and lubricates to reduce sticking, binding, and squeaking on bottling equipment, conveyors, food service racks, slicers, and other equipment. Safe on most surfaces. Silicone- free and VOC-free. No chlorinated solvents.

Sprayon® LU™7000il—Silicone-free lubricant loosens corrosion.

Tri-Flow™ Synthetic Oil with PTFE—Nonstaining oil does not emulsify in water.

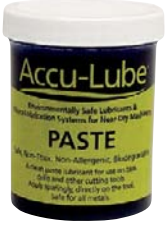
LPS® Accu-Lube®

Hand-Applied Metalworking Lubricants

Tapmatic® Edge Lube—Biodegradable bar is packaged in a cylinder for rotating or stationary cutting tools. Excellent for sawing applications, eliminating heat buildup and belt loading. Low toxicity. Compatible with oil and water systems. Safe on all metals.

Tapmatic® Edge Creme—Biodegradable paste cutting fluid can be applied to tools before tapping or reaming. Use when drilling, tapping blind holes, forming, bending, precoating fasteners, and lubricating rubber seals.



Stick Lubricants—Designed to reduce heat buildup in belt, disc, or wheel grinding operations.

Multipurpose
No. 4YPL5

Metalworking MQL Lubricants

Formulated to apply in very small quantities for near-dry machining, avoiding heat buildup, and reducing tool wear. Minimum Quantity Lubrication (MQL) technology is designed as a cleaner, less costly alternative to flood and mist coolant practices. MQL dispensing applicator systems are sold separately; see page 2461.

OIL-BASED

MQL™1000—Vegetable-based ester fluid is compatible with all microlube and micromist systems. Helps control buildup edge and sliding friction.

BIODEGRADABLE

FG-2000—Superior food-grade formula with nonchlorinated EP additives for moderate to heavy near-dry machining.

LB-2000—Great for sawing solids up to 6" dia. Fluid will not discolor parts.

LB-3000—Designed for medium-duty machining.

LB-5000—Light-viscosity lubricant will not stain during post-heat treating. Designed for medium machining on aluminum that requires post-heat treating.

SYNTHETIC

Multipurpose—Water-based formula with nonchlorinated extreme-pressure (EP) additives for moderate-duty machining, sawing, and cutting. It provides rapid heat dissipation.

Water-Soluble and Biodegradable Cutting Fluids

TrueTap® Aqua—Nonaerosol fluid offers excellent cooling and lubrication for tap and drill applications. It is formulated as a replacement for solvent- or oil-based fluids.

Tapmatic® AquaCut—Water-based fluid is compatible with steel, aluminum, and most other metals, except magnesium. Corrosion inhibitors prevent flash rusting. Nonflammable.

Formula 1 Aqueous—EP-X3® additive gives performance boost. Proprietary water base in Aqueous is noncorrosive.

LB-2000—Environmentally safe oil is hand-applied for drilling, tapping, and reaming. Safe for all metals.

Tapmatic® Natural—Nontoxic, nonhazardous formula eliminates galling and seizing. Fluid does not contain sulfur, chlorine, chlorinated solvents, water, mineral oil, or inactive fillers.

Bio-General Purpose™ Cut 40—Light- to medium-duty oil is formulated to reduce smoke and mist.

Bio-SynXtra™—Heavy-duty oil reduces smoke and mist.

Bio-Mist™ EP—Extreme-pressure lube for misting cutting tools working nonferrous metals, ferrous alloys, mild steel, and cast iron.

Eco-Oil—Natural oil base resists smoking and fuming.

ProTap—Formula is free of all regulated chemicals. Highly effective on all metals.

Oil-Based and Synthetic Cutting Fluids

OIL-BASED

Cutting Oil—Thread-cutting lubricant for use on all types of ferrous and nonferrous metals. Sulfur-free, low-odor formula.

TrueTap® HD—For heavy-duty use in severe applications. Use to tap, thread, drill, saw, shear, turn, and ream metal parts, pipes, conduit, screws, housings, aluminum sheets, stainless steel and exotic metals.

Tapmatic® #1 Gold—Protects and lubricates, reducing friction and eliminating chip welding. Safe to use on all metals.

Tapmatic® TriCut®—For hard-to-machine metals.

Mobilcut™ 100—Mixes with different waters to form stable emulsions for cutting and grinding operations.

MobilMet® 426—Automatic operation on materials with a Brinell hardness up to 300.

MobilMet® 766—For tapping, threading, milling, gear shaving and shaping, broaching, planing, parting-off, and automatic lathe.

LU™ 208—Friction-reducing triglycerides offers fluid film protection in all ferrous/nonferrous machining applications.

Aluminum—For use on aluminum.

EP-Xtra®—Yields microfine finish while preventing rust and corrosion.

Xtra-Thick®—Fluid clings to the workpiece to stay in place during high-speed rotation.

Xtra-Foamy®—Allows gauging of application rate and fluid presence.

Trim® Tap Heavy—For taps ½" dia. and smaller and helps reduce rubbing of tool flank.

Trim® ON 287—Low odor oil for removing metal. Will not stain and has a lower viscosity, allowing for better cooling.

Trim® Tap Light—For taps ¼" dia. and smaller and helps reduce rubbing of tool flank.

SEMISYNTHETIC

Trim® MicroSol® 585XT—Nonchlorinated formula helps extend sump life. For machining, grinding gray iron, and titanium alloys.

Trim® MicroSol® 685—Microemulsion is compatible with aluminum, magnesium and copper alloys, cast iron, steels, stainless steels, plastics, and composites.

Trim® SC230—Combines synthetic coolant and synthesized oil that helps reject tramp oil and improves sump life. Deliver good flushing action into machine's chip removal system.

Trim® SC620—Low foam and low odor fluid is for machining and grinding.

SYNTHETIC

Trim® MIST—Low-odor fluid works well in cutter/grinder operations.

WATER BASED

Trim® Sol SF—Siloxane free formula helps control edge build-up. Nongumming film protection. Residue is easily removed with water.

Trim® C270CG—Provide corrosion inhibition for tapping and reaming operations without chlorine or sulfur based additives.

Trim® C276—Low foam and mist fluid leaves a soft film protection on bare metal parts of machine tools. Easily washes off with coolant solution.

Machining Coolants

SEMISYNTHETIC

SS-405L—For machining or grinding.

ULTRACUT® 375R—Compatible with CNC machining.

MicroSol® 690XT—Perform in high-pressure applications, offering cooling and mechanical lubricity.

E206—Effective on ferrous and nonferrous metals.

E850—Provide corrosion protection for ferrous and nonferrous metals.

E925—Deliver exceptional surface finish.

SC520—For high-speed milling and turning operations.

VP Series—Resistant to ionic shock and hard water. For high pressure coolant applications.

VP Tech P—High content mineral oil with excellent bio-resistance.

Aerotech B—For use in aluminum machining and steel applications. Resistant to ionic shock and hard water.

VP Tap—For easy cleaning of parts and tools.

SILICONE

Remove oily residue, soap deposits, and scum that reduce coolant life span.

SYNTHETIC

Carbide PowerGrind—Prevent chemical damage to carbide in grinding applications.

G-25J—For Blanchard grinding of cast iron and other ferrous metals.

G-1066D—For diamond wheel grinding and slicing.

PowerSaw—For sawing operations in moderate to heavy-duty application.

PowerChip 2000—Works well in hard-water areas.

SN-100A—Resist bacterial growth, fungal growth, and rancidity.

Vytron N—General-purpose formula prevents rancidity.

C115—For cast iron and mild steels.

C270—Use in form grinding, drilling, tapping, and reaming operations.

C350—Provide corrosion resistance on aerospace aluminum alloys, titanium, Inconel®, brass, and high-strength alloy steels.

VP Series—For moderate and heavy machining.

WATER-SOLUBLE

WS-11 Nonchlorinated—For use on all metals.

WS-5050—Compatible with CNC machining.

ULTRACUT® Aero—For use with aluminum, titanium, stainless steel, Inconel®, and other metals.

ULTRACUT® Pro and Pro CF—ULTRACUT Pro— Offers resistance to fungus and bacteria.

ULTRACUT Pro CF—Provide maximum bio-resistance.

VP 650P

- For use in manual operations where lubrication is required.

K-5-P—Dislodge difficult to reach sludge and containments.

Val-U-Clean—Clean the sump.

WATER-SOLUBLE, BIODEGRADABLE

Bio-Metal Cool™ GP—For use with ferrous and nonferrous metals.

Stumpy Spout Lid
No. G3515

OilSafe

Oil Containers and Pumps

Color-coded system manages lubricants from bulk storage to the correct point of use. Fully interchangeable drums and lids. Pumps deliver 1L per about 12 strokes. Fit 3L, 5L, or 10L drums.

Description	Item No.
Fluid Storage Container	
1.5 Liter	**3REL1**

TRICO Accu-Lube

Lubricant Dispensing Systems

SPRAY COOLING SYSTEMS

Portable Spray Unit—Includes 7" flexible nozzle, 60-lb. magnetic base, and a 7-ft. siphon line with a 40-micron stainless steel filter.

1-Qt. Lil-Mister®—Features liquid level gauge and separate air and coolant controls. 5-ft. brass line. Includes mounting bracket and 6" straight brass nozzle. For light-duty machining operations.

1-Gal. Spraymaster®, Needle Valve—Feature liquid level gauge and individual air and coolant controls on the unit. Brass armored lines and straight brass nozzles.

1-Gal. Spraymaster® II, Solenoid—Coolant is delivered in an adjustable spray using independent air and liquid controls. Brass armored delivery lines. 110V. 7" flexible plastic nozzles with controls at the nozzle.

DROP DISPENSERS

Air-operated systems dispense lubricant to cutting tools. Solenoid-equipped model No. 6Y841 allows for remote shutoff and machine synchronization. Include 18" Loc-Line® nozzles, 6-ft.-long lines, and 16-oz. capacity reservoirs.

LUBRICANTS

Designed for use with Micro-Drop dispensing systems or other microlubrication equipment. (Not intended for mist-coolant systems.) 1-gal. container.

MQL APPLICATORS

Air-operated applicators dispense lubricant to the cutting edge without creating a mist, for near-dry machining and sawing applications. Positive displacement pump with pneumatic timing delivers lube smoothly. Air and liquid flow are easily adjusted. Environmentally safe, minimum-quantity application eliminates hazards from misting. 10-oz. reservoir. Junior Applicators include magnetic base nozzle and magnetic mount. Not for use with synthetic coolants; use MQL Lubricants,

ABANAKI OIL SKIMMERS

Oil Skimmers

These skimmers are for removing oil from the surface of coolant or water. Ideal for machining centers, parts washers, and sumps.

DISK SKIMMERS

Remove up to 1½ gph. Boomerang blades wipe more oil. 110V, 1-phase, 60 Hz motor. 12" disk.

No. 3AU32—Housing and frame are made of polymer.

No. 3EJF5—Housing and frame are made of carbon steel.

TUBE SKIMMERS

No. 6KYV8—Oil Viper is the highest capacity industrial tube skimmer. It removes up to 100 gph using a ¾"-dia. tube that floats on the surface of the water to collect oil. 360° wiper cleans tube completely. Carbon steel construction. 110/220V, 1-phase, ⅓ HP, 60 Hz motor. Tubes Nos. 6KYV9 through 6KYW3 sold separately, see Grainger.com.

TubeTastic!™—Light capacity, ⅜"-dia. tube collects up to 1½ gph. Mounts to side of tank. 110V, 1-phase, 60 Hz motor. Tubes Nos. 1MEC2 thru 1MEC6 sold separately, see Grainger.com.

BELT SKIMMERS

Nos. 3BU53 through 3BU56—Collect up to 1 gph. Made of polymer. Include 1" wide elastomer belt. 110V, 1-phase, 60 Hz motor.

Nos. 29UJ11 through 29UJ14—Collect up to 1 gph. Include 1"W synthetic belt. Motor can use 110V outlet or can be directly wired to 12/24V power.

Nos. 6Y757 through 6Y760 —For use in coolant sumps and parts washers. Include 1"W stainless steel belt and 24-hr. timer. 110V, 1-phase, 60 Hz motor. 3-ft. discharge hose. Can be used with Decanter No. 6Y756, sold separately.

Nos. 6Y752 and 6Y753—Remove up to 6 gph. For use in larger coolant sumps and parts washers. Include 2" wide stainless steel belt. Housing and frame are made of polymer. 110V, 1-phase, 60 Hz motor.

MAGNET-MOUNT OIL SEPARATOR

Pumps oil-laden coolant through a filter media chamber which traps debris and tramp oil. The oil is drained away and clean coolant is continuously returned to the coolant sump. Operates at 2.8 gpm. Requires Electric pump and float No. 45AP80 or Pneumatic pump float No. 45AP81, sold separately.

ACCESSORIES

No. 6KYV5 has a 0% to 32% Brix range.

No. 6KYV6 has 0% to 10% Brix range.

No. 6KYV7 has a 0 to 14 pH range.

TRICO

Opto-Matic® Constant Level—Zinc-cast construction with zinc plating. Feature adjustable level setting, multiple air vent slots, and side and bottom ports. ¼" pipe thread connection.

Opto-Matic® Closed System—Features adjustable level setting, aluminum body, and glass reservoir. Can be installed on rotating equipment using a ¼" NPT connection port. A pressure balancing line is user-installed between the oiler and the housing to ensure correct operation.

Watchdog®—Integral sight glass allows instant viewing of the oil level in the housing. Oiler is installed on the centerline of the desired oil level; no adjustments are needed. Mounts on rotating equipment using the 1" NPT viewport on a bearing housing or gearbox. Metal body, glass reservoir. Includes wire guard.

Wire Guards—Use these guards with Opto-Matic® oilers.

LDI INDUSTRIES

Air/Oil Reservoir—Converts shop air into low-pressure hydraulic power. Max. operating pressure: base mount up to 80 psi. Fluid outlet is ⅜" NPTF. Air inlet is ¼" NPTF for base mount.

Full Flow Electric Reservoir—Can be connected in series to valve or valve brushes. Closed solenoid provides automatic On/Off and fluid control.

Electric Chain Oiler Reservoirs—Adjustable needle valves set drip feed rate. For automatic operation, wire normally closed solenoid across machine starting switch. Feeding stops when machine is turned off. Include 1.5" x 0.38" nylon brush.

Desiccant Breathers

TRICO LDI Industries

Max. operating temp.: 200°F

ABS plastic/acrylic construction

Protect and extend service life of industrial equipment by keeping damaging moisture and particulate contamination out. Use silica gel technology to adsorb moisture inside equipment with a color indicator to show when replacement is needed. Dual, antistatic 2 micron filter system collects airborne particulates to reduce sludge buildup in the fluid reservoir.

PRESSURE/VACUUM BREATHER

Allows excess pressure to vent as heat builds up in sealed pressure systems. 20 micron bronze filter. Steel body with aluminum top cap. Buna N seals.

Low Pressure No. 1U915

High Pressure No. 1U926

Liquid Level Sight Plugs/Checks

Can be used as an observation window to check burner flames, gears in motion, and relay or switch operation in sealed housings. Allow visual inspection of fluid levels in gear boxes or reservoirs. Low-pressure sight plugs feature stainless steel reflector to aid viewing of dark fluids. Solid brass body, clear glass sight, and Buna N seals. High-pressure sight plugs have a fused heavy glass window. Steel body with electroless nickel plating. Open view (no reflector).

Note: Not intended for steam applications.

Closed-Circuit Front-Mount Liquid Level Gages

- Aluminum construction with Buna N seals

PIPE ADAPTERS

1/4" NPTF brass pipe adapters for mounting in heavy-wall tank or weld spuds on reservoir walls. Borosilicate sight glass with red line on white background.

DIAL THERMOMETERS

Dial probe thermometer series gage features highly accurate protected sensing element. Stainless steel dial thermometer: 1 3/8" dia., 50° to 300°F. 1/2-20 UNF thread. Borosilicate sight glass with red line on white background.

RIGID PLASTIC SIGHTS

Provides wide-angle viewing through tough, break-resistant transparent cylindrical nylon sight. 1/2-20 UNF thread.

NEEDLE VALVES

Gage body may be removed from valves without loss of fluid. Features brass shut-off valves, 1/2" NPTF thread. Borosilicate sight glass with red line on white background.

Vented Oil Gages

- Brass construction with Buna N seals

Gages provide quick, visual inspection of fluid levels in gear boxes and bearing housings. Protective gage shield rotates for optimum viewing. Glass sight. Short and long elbow gages may be disassembled on site, elbow alone installed, and gage reassembled. Union coupling gages provide a convenient break point.

Vents

FILTER VENTS

Relieve excessive pressure from gearboxes. 40 micron filter element. Steel and zinc construction.

PROTECTED VENTS

Provide a labyrinth air path to restrict direct entry of dirt and moisture to reservoir or gearbox. Aluminum construction.

RELIEF/FILLER VENT PLUGS

Dual-purpose relief or filler vent plugs can be used for gearbox housings and bearings to eliminate excessive pressure. Automatic reset for continuous duty. Plated steel and brass construction.

Grease Dispensers

TRICO

Microprocessor-controlled, prefilled dispensers apply a precise flow of grease to critical machine parts. Easy-to-read LCD.

Streamliner® V—Ideal for industries where high moisture, accelerated temperatures, and other contaminants are present. Operating pressure of 80 psi. 6 variable dispensing rates: 1, 2, 3, 6, or 12 mo., and purge.

Streamliner® M—Antivibration, break-free design allows unit to be deactivated and adjusted as necessary. High operating pressure of 280 psi. Up to 8-point lubrication capability. 6 variable dispensing rates: ½, 1, 2, 3, 6, or 12 mo. Service packs with grease pouch, battery pack, and cover sold separately.

LDI Industries

Reservoirs

- Aluminum construction and Buna N seals
- Max. temp: 140°F for polymer bowls, 180°F for borosilicate glass bowls (except RDF Series)
- Ratings at atmospheric pressure (except where noted)

Break-resistant, transparent polymer bowl allows full 360° view of fluid. Nos. 1U623, 1U669, and 1U671 have borosilicate glass bowl, enhancing fluid compatibility and thermal shock resistance. RDB300, R100, RDF, and RFF100 Series disassembles for cleaning.

RDB300 Series Manual Control Chain Oilers—Visible drip rate. On/Off toggles do not affect previously set feed rate. 1.5" x 0.38" nylon bristle brush can be trimmed.
- Max. temp.: 250°F for nylon brushes

R100 Series Gravity Feed Reservoirs without Flow Control—For use as makeup or replenishing reservoirs. Self-closing snap lid filler caps.

RCL Series Constant Level Reservoir—Automatically maintains oil levels in bearing, pump, or gear housings. Large surge capacity. Bottom outlet can be used as drain. Side or bottom mount.
- ⅛" PTF air vent
- ½" NPTF outlet

RDF Series Drop Feed Reservoirs—Dispense oil by gravity from reservoir bowl through adjustable needle valve. Feature vented sight chamber, adjustable metering, toggle shutoff, and self-closing filler cap.
- 1500 SSU max. viscosity
- Pipe thread/NPTF, except No. 1U680 is straight thread/remote mount
- Fluid temp.: 250°F for glass bowl

REO Series
No. 1U669

REM Series Multiple Feed Electro Reservoir—Automatically controls full flow of lubrication from a single reservoir to 2 locations. Adjustable needle valve controls drip feed rate.
- 120V/60 Hz, 1-phase solenoid
- Class B molded water-resistant coil

REO Series Automatic Solenoid-Controlled Lubricators—Provide controlled lubrication through a needle valve.
- 120V/60 Hz, 1-phase solenoid
- Class B molded water-resistant coil

RFF100 Series Full Flow Dispensers—Use as central dispensers for lubrication systems. Oil can be shut off manually. Vented, self-closing snap lid filler cap.

RVP Series Air-Operated Reservoir—Allows accurate spray pattern adjustment while applying lubricants.
- 40-micron filter
- ¼" NPTF air inlet/outlet
- ⅛" NPTF oil to valve
- Max. inlet unregulated air pressure: 125 psi
- Max. regulated air and fluid pressure: 30 psi

WESTWARD

Industrial-Duty Bottle Jacks

- Steel construction
- Blue enamel, air-dry finish
- Include handle

Protects hydraulic system from over pumping. Hard cast iron steel construction and heat-treated extension screw saddles on 2- to 20-ton models. Precision-machined release valves provide positive load control on jack descent. Wide base provides better stability and strength.

ENERPAC

Hand and Foot Pumps

Steel construction, except where indicated. 2-speed models have high flow at low pressure and low flow at higher pressure. All units are shipped with oil.

Lightweight—Designed with handle lock and for easy portability. Durable glass-filled nylon reservoir, nylon encapsulated aluminum pump base for maximum corrosion resistance, and an internal pressure relief valve for overload protection. No. 46C563 has integral 4-way valve for operating the double-acting cylinders.

Ultima Series Steel—Pumps operate with reduced handle effort and an ergonomic grip for less operator fatigue. Vent-free reservoir eliminates spills and integral reservoir over pressurization protection. The quick grip handle allows for easy transport.

Low-Pressure—Feature external load-release valve, and internal pressure-relief valve for overload protection. Nos. 46C557 and 46C560 pump oil both forward and reverse handle movement, improving overall efficiency. Ideal where mounting space is restricted. No. 46C561 can be operated in horizontal and vertical position with pump head and oil outlet facing downwards.

Ultra-High Pressure—Allows for a faster fill and reduced cycling time. Feature a large release knob that allows improved control of pressure release. Aluminum construction, except for ultra-high pressure stainless steel fittings.

Hydraulic Foot Pump—Compact unit is lightweight composite construction, with steel frame, internal pressure relief valve, and large foot-pad release for controlled return. Foot pedal lock allows for greater portability.

Repair Kits—No. 1ANV4 includes screen and all related balls, washers, O-rings, gaskets, retaining rings, and pins. No. 1ANV5 includes filter assembly, screen, inlet adapter, and all related O-rings, balls, washers, gaskets, and springs.

Electric Pumps

ENERPAC

- 115VAC, 50/60 Hz
- ⅜" NPT fluid port

Universal motor, except No. 6BU67 has induction-type motor.

Portable—2-speed operation. Pumps start under full load. Designed for intermittent duty-cycle. No. 26VY57 is double-acting.

Z-Class—Heavy-duty bearings with steel reservoirs. No. 6BU67 includes low-voltage pendant with sealed switches. Designed for extended cycle applications of more than 1 hr. Nos. 6BU65 and 6BU66 are designed for intermittent use under 1 hr. No. 26VY45 features backlit LCD with built-in hour meter and diagnostics.

No. 5ZL45

Air Pumps

ENERPAC

- Max. pressure: 10,000 psi
- ¼" NPT air inlet
- ⅜" NPT fluid port
- Include swivel air coupling on air intake port

Turbo II—Pumps start at extremely low pressure. Reinforced HD reservoir. 76 dBA.

Hand- or Foot-Operated—3-position treadle for cylinder advance/hold/retract. Can be used in all positions. No. 4Z482 includes built-in carrying handle and base mounting slots.

Z-Class Pump—High-efficiency 2-speed pump offers higher oil flow, higher bypass pressure, and a larger-capacity oil reservoir with sight gauge. Includes carrying handle and manual valve.

XA-Class Foot-Operated—2-pedal design features variable air flow and fine metering, with high oil flow. Externally adjustable pressure valve. Pedal locks. Include ground screw for improved ATEX explosion safety.

No. 1Z907

Air Hydraulic Work Holding Pumps

- Operating air: 50 to 125 psi
- Cap.: 1250 to 5000 psi
- Air inlet: ¼" (F)NPT
- Hydraulic-to-air ratio: 45:1 (3000 series); 60:1 (5000 series)

Pumps have on-demand stall-restart operation and generate hydraulic pressure by using air pressure. Feature adjustable pressure relief valves. D03 valves are required for proper operation; sold separately at Grainger.com®. Swing and Threaded Body Cylinders are available on Grainger.com®.

Cordless Hydraulic Pump

ENERPAC

- Max. pressure: 10,000 psi
- ½ HP

Portable hand pump with powerful 28V lithium-ion battery delivers exceptional speed and run time. Bladder reservoir helps prevent contamination and allows pump usage in any position. Features directional control valve, safety lock, and On/Off switch. Use in remote locations without access to power or indoors where trip hazards are a concern. Includes built-in handle, charger, 2 batteries, and carrying strap. Compatible with all Enerpac® hydraulic tools and small to medium cylinders.

Standard Hydraulic Rams

ENERPAC

Extreme Environment Rams—Nickel-plated to resist corrosion in extreme environments. Viton seals are heat- and chemical-resistant.

General Purpose Rams—They have a maximum working pressure of 10,000 psi.

High Cycle Rams—Mounting configurations allow them to be attached to fixtures.

Lightweight Rams—Made of aluminum so they weigh less than standard steel hydraulic rams, making them more portable and easier to transport.

Low Profile Rams—Feature low height when fully retracted, allowing them to be used in tight or confined spaces.

Low Profile Hand Jacks—Feature an integrated pump and handle for manually lifting heavy loads without requiring external connections. Ideal for use where there are a small or narrow clearances.

Lift Kit Rams—Lift-kit rams are used with cribbing blocks and stackable adapters that allow the rams to lift or separate items in stages.

Hydraulic Ram & Pump Sets

ENERPAC

Hydraulic rams support heavier loads at higher psi ratings than standard hydraulic cylinders. The manually operated hand pump is portable and can be brought to the workpiece.

Standard Ram & Pump Sets—Standard rams and pump sets are used in general purpose applications for one-direction lifting and supporting. The manually operated pump attaches to the ram to lift and support heavy loads. These single-acting cylinders are spring-loaded and return the load when pressure is released.

Low Height Ram & Pump Sets—Low-height ram and pump sets include a low-profile hydraulic ram, a manually operated pump, and other accessories needed to lift and support heavy items in tight spaces. Low-profile rams have a smaller range than standard rams. Hydraulic rams support higher psi than standard hydraulic cylinders.

Hollow Ram & Pump Sets—Hollow ram and pump sets have a ram with a hollow plunger and piston rod that can be used with a threaded rod for pushing, pulling, tensioning, and testing applications. The rod is threaded through the piston and threaded into or through the workpiece to pull it out or push it into place. The manually operated pump is portable for bringing to the workpiece.

ENERPAC

Workholding Hydraulic Rams

Have a high cylinder force to position and securely clamp parts in high-volume applications where tight tolerances are critical.

SOLID PLUNGER

Block-body hydraulic cylinders are single-acting, which means they provide movement in one direction and have an internal spring that returns the cylinder to its starting position. Long stroke length allows use in tight spaces such as in welding applications.

HOLLOW PLUNGER

Block-body hydraulic cylinders support loads from both ends, allowing for push and pull operations that can utilize full cylinder capacity. They have a threaded collar and base mounting holes to provide a variety of mounting options, including T-slot, tabletop, and surface mounting. Single-acting cylinders are spring-loaded to ease unloading.

Heavy-Duty Hydraulic Pullers

- Max. pressure: 10,000 psi

Speed crank and mechanical adjusting screw allow fast contact to work before hydraulics are applied. Made of forged steel components.

Master Puller Sets—Come complete with composite hand pump, single-acting hollow cylinder, 6-ft. hose, gauge, gauge adapter, and 4 puller styles (grip, cross bearing, bearing cup, and bearing puller). Pump and hollow ram provide precise hydraulic control and help ensure safe, efficient pulling. No. 2RV25 includes metal case. Nos. 2RV26 and 2RV28 include saddle and wood case.

Grip Pullers—Handle large components such as bearings and drive gears. Allow a person to handle the entire job and have a safety cage jaw retention system. Sets include 10,000 psi cylinder, flat and tempered ram point sets, and lift plate with mounting screws.

Note: Grip pullers do not include hydraulic pump, hose, or gauge.

Hydraulic Ram Spreaders

ENERPAC

- Max. pressure: 10,000 psi

RAM SPREADERS

General purpose ram spreaders attach to a hydraulic pump to spread crushed parts, open stuck doors, or separate parts in automotive and industrial applications.

LIFTING WEDGE RAMS

Have one flat side and a stepped wedge on the opposite side for use in lifting items off the ground. The item is lifted in stages and cribbed (or supported) while the wedge is moved to the next step to lift the item higher.

FLANGE RAM SPREADERS

Used to separate pipe flanges in industrial pipe maintenance operations. The ram is placed between the flanges and the pipes are spread as the jaws of the spreader open.

LIFT WEDGE RAM AND PUMP SETS

Include items to perform basic lifting of low-clearance items. Lift-wedge rams have a jaw with a flat side for resting on the ground and a stepped wedge side that allows items to be lifted off the ground in stages. The lifted item is cribbed, or supported, between lifting steps. Sets include a lift-wedge hydraulic ram, pump, and other accessories.

Hydraulic Nut Splitters

- Max. pressure: 10,000 psi

Nut splitters are used to break apart corroded or frozen nuts to free the bolt. Attach the nut splitter to a hydraulic pump to cut the nut off the bolt. Replacement blades sold separately, go to Grainger.com® and search for nut cutter blades.

Hydraulic Pipe Bender Set

- Max. pressure: 10,000 psi

Accurately makes smooth, wrinkle-free bends up to 90°. Schedule 40-160 rigid pipe. Includes composite hand pump; 10-ton, 10" stroke cylinder; 6-ft. 10,000 psi hose; 6 lightweight, heat-treated aluminum bending shoes; 2 pivot shoes; 2 pivot pins; shoe lock pin; bending frame; cylinder saddle; and angle indicator. Comes in lockable steel storage case.

Heavy-Duty Hydraulic Maintenance Sets

ENERPAC

- Max. pressure: 5000 psi

General purpose maintenance sets are used for performing basic maintenance tasks around a facility or worksite, including lifting, bending, and straightening. These sets include a hydraulic cylinder, hand pump, and other compatible attachments.

Note: When cylinders are used with maintenance set attachments, the maximum system pressure must be limited to half the rated pressure (5000 psi). Capacity of cylinders limited to half of rated capacity.

Heavy-Duty Industrial Hydraulic Press Sets and Accessories

ENERPAC

Arbor Presses—Foot mounting holes allow vertical or horizontal positioning. Slotted back simplifies loading and unloading of longer parts. Order pump and cylinder separately.

C-Clamp Presses—Nos. 18Y517 and 18Y518 are operational in all positions and include foot mounting holes for vertical or horizontal positioning.

Bench Press—Use where there is limited space, for quick press access, or for smaller parts. Includes 6-ft. thermoplastic hose. Cylinder mounting adapter allows lateral positioning along rails. Ships with predrilled mounting holes.

H-Frame Presses—Feature welded H-frame for longer life. Each includes heavy-duty steel pump mounting bracket, 10,000-psi pump, cylinder, hose, gauge, and gauge adapter. Nos. 3KD82 and 3KD81 feature 10-ft. control pendant; roller head design allows side-to-side movement and cylinder locking. Presses with over 10-ton capacity are equipped with an exclusive Hydra-Lift™ bed for adjustment.

35-Ton Hydraulic Punch and Punch and Die Sets

Note: Material thickness should not exceed hole diameter.

35-Ton Hydraulic Punch—
Designed to punch burr-free holes in mild steel up to ½" thick. Includes bench-mount bracket, metal storage case, die changeover tools, and ⅜" coupler. Works with hand-, air-, and electric-powered hydraulic pumps.

- Spring return cylinder

Punch-and-Die Kits—
Include punch and 4 die sets that produce round holes sized 0.44", 0.56", 0.69", and 0.81" in diameter. Once punched, these holes will accommodate standard bolts sized ⅜", ½", ⅝", and ¾".

Needle and Check Valves

Needle Valve—Controls cylinder speed. Can be used as a shutoff valve for temporary load holding.

Manually Operated Check Valve—Improves safety in load-holding applications. When closed, oil is allowed into cylinder but not back to pump.

Pressure Relief Valve—Add to a 10,000 psi pump or to a hydraulic system to limit system pressure. Opens when preset pressure is reached. Repeatability: ±3%. Includes 3-ft. line hose kit.

Hydraulic Split Flow Valve—Allows a single pump to independently operate 2 cylinders. Steel construction.

Hydraulic Torque Wrench Drivers

- Max. pressure: 10,000 psi
- Nickel-plated steel construction

All X-Series tools are CE-ATEX declared and ship with calibration certificate. Constant torque provides accuracy of +/- 3% across full stroke. Robust positioning handles have multiple mounting options, promoting safer usage of tool, even in hard to reach applications. Wrenches include carrying case. Drive units are compatible with W-Series, Ultra-Slim and WCR-Series cassettes.

X-SERIES SQUARE-DRIVE

Lightweight and ergonomic with easy operation reaction arm and push-button drive release. Feature extra durable manifold that provides added safety for user. Reaction arm has large lever that makes it easy to operate. This wrench design provides a small operating radius without sacrificing the endurance of the tool.

X-SERIES LOW-PROFILE HEXAGON

Ultra-slim, compact tool offers superior strength to size ratio, providing easy access with greater durability. Feature fast release drive that enables rapid exchange of cassettes without the use of tools for quick change-out. For Cassettes, go to Grainger.com® and search by "Hydraulic Torque Wrench Cassettes". Cassettes not included.

Air Pump

ENERPAC

Torque Wrench Pumps

- Max. pressure: 10,000 psi
- ¼" fluid port
- 85 to 90dBA

AIR PUMP

- ½" air inlet

2-speed operation. Equipped with 2 internal relief valves, 1 factory preset for overload protection and 1 user-adjustable for setting max. system pressure. With pressure gauge, filter/regulator/lubricator, sight gauge, roll cage, and oil drain. Air-operated valve included in pendant.

ELECTRIC PUMPS

- 115VAC
- 24VDC control pendant

No. 30P879 is a powerful 2-speed pump that features built-in gauge, relief valve, adjustable pressure relief valve for accurate torque adjustments, and gives precise repeatability. No. 3PDC8 includes On/Off toggle, pendant with electro-mechanical push-buttons, and 24V transformer timer and circuit breaker. No. 3PDC9 has a multilingual digital LCD; tracks maintenance cycle, shows current pressure, cycle count, low-voltage warning, and troubleshooting/diagnosis. Autocycle feature allows continuous torque wrench cycle operation.

1.6- to 30-Gal. AC Power Units

Recommended motor starters are sold separately on page 165.

1.6-GAL.

- Horizontal mounting

Feature an aluminum center adapter that also serves as a port manifold and valve housing with a load-holding check valve, and a VM01 cartridge relief valve. Pump housing has an anodized 70 Rockwell C aluminum oxide finish. Includes direct manifold mount.

5- AND 15-GAL.

- Fixed-clearance pumps (5-gal.)
- Pressure-balanced pumps (15-gal.)
- Vertical mounting for all models

Come fully assembled with filler breather, fluid level gauge with thermometer, pressure gauge, relief valve, and a manifold block for mounting a valve. Manifold is for direct pressure and tank (P&T) plumbing. Block comes with SAE ports only. Valve options and additional components are sold separately on page 2477.

8- TO 30-GAL.

BUCHER hydraulics
MONARCH Hydraulics, Inc.

Provide smooth, quiet, operation and feature an adjustable relief valve, bayonet-style filler breather, drain port, pressure gauge, SAE ports, sight/level/temp. gauge, and removable top plate to ease maintenance. Models 5 HP and larger have a premium-efficiency motor rated for 50 Hz and 60 Hz operation for overall system efficiency.

Power Unit Accessories

Reservoirs—Variable size for AC and DC power units.

Valve Manifold Kit—D03 manifold is for use with 1.6-gal. units (¼ NPT remote mount and direct mount options).

Electric Lowering Valve Kit Assemblies—Provide simple installation into Monarch power units. Good for use in raise-hold lower applications where increased efficiency and exact positioning of the cylinder needs to be provided. Consist of a differential poppet-type and has a 2-way/2-position normally closed valve.

AC Hydraulic Power Unit for Auto Hoists

- 208/230V, single-phase, 18.5A
- Includes #12 AWG 3-wire, 18"L cord

Rugged power unit is for use in 2- and 4-post auto hoists with single-acting cylinders to raise, hold, and lower. High-torque AC motor is capable of starting up under load. Adjustable, high-efficiency VM01 relief valve and momentary push button start switch. Hardened steel valve parts are field serviceable.
